## SOME GOOD ASSAYS.

#### Manager Teasdale of Blue Jay Extension Pleased With Condition at Mine.

George Teasdale, manager of the Blue Jay Extension Mining company, which is operating a property in the south-west corner of Beaver county, has been in the city for several days and will remain until after the Fourth of July remain until after the Fourth of July before returning to camp. Mr. Teasdale expressed considerable satisfaction today over the results ob-tained from the assayer who fried out some samples yesterday and which came from the north and south vein crossing the property. The vein was encountered after following a hssure for a distance of 145 feet west from the shaft, where it was cross-cut for a distance of more than three feet. The ore assuyed represented an average. Mr. Teasdale says, of about 18 Inches of the vein, and the results obtained were 3 per cent copper, 9.8 per cent led, 1<u>5</u> ounces silver nd .05 ounces gold. The face of the crosscut is in a body of good milling ore.

## New Concern Absorbs the Old One-Freparing to Drive a Long Tunnel --- Corporation Financed.

Chicago capitalists have become interested in a Big Cottonwood mining proposition and, as a result of a deal consummated a few days ago, a new company is in the process of organization and will be known as the Kessler's Peak Mining & Milling company, with a capital stock of 500,000 shares of the par. value of \$1 each.

The new company will absorb the Wheeler & Wilson Mining company, which has been officered by local par-ties and who have made the property

a very attractive proposition, During last year some good ore bodies were disclosed. A shipment of ore was made to local smelters just before the coming of the heavy snows and the subsequent shutting down of the mine for the winter. for the winter.

The difficial family of the new com-The official family of the new com-pany has not been entirely made up, but it will be before the close of the present week. W. F. Gray, the man-ager, said today that it is the purpose of the new company to commence at once to drive a new tunnel lower down the mountain and he will leave for the mine accin temportry working with a mine again tomorrow morning with an engineer to locate the spot where the mine again tomorrow morning with an engineer to locate the spot where the adit will start. Mr. Gray figures that it will require at least 1,000 feet of tun-nelling to tap the ore bodies now disclosed above and will give a depth on the vein of 3,000 feet, whereas, the up-per tunnel cuts the ore only 800 feet under the surface.

The Kessler property is located in a favorable section of the Big Cottonwood district. It is not to exceed a mile from the Maxfield mine, one of the reg-ular cantributors to the local market. It is in the same mineral belt which has been proven in Alta, just over the range

range. While work is being pushed forward in the lower tunnel it will progress with equal vigor in the upper workings. Considerable work remains to be done there to make the ore bodies more readily accessable, but Manager Gray expects to be ready to come into mar-ket quite regularly with ore in any-where from60 to 90 days. By the enlistment of the help of east-ern talent it is said the new company starts off with ample funds on hand to easily the work outlined to a successful completion.

empletion

completion. The new Kessler company will start out as the owner of more than 12 claims, upon which surface showings are very enticing. Five distinct vens are traceable, all diverging apparently from a point near the peak, from which the comparation derives its title. An the corporation derives its title. An average of the pay chute in the upper workings shows 27 per cent lead and 23 ounces silver.

ing Assay Returns. addedd fever is spreading and

DAIRY PRODUCTS. 

MILK FEVER OR PARTURIENT FEVER.

(By R. W. Clark, expert in charge of animal husbandry, Utah Experi-

ment Station.) This disease occurs only in cows and before or after calving; rarely does it occur before calving. The name is inappropriate because in a majority of inappropriate because in a majority of cases no fever is present. This disease is most prevalent in dairy districts because it occurs in the heavy milking cows. It usually takes the best cow and when at her best. The disease may develop at any age, but cows with first and second calves and old cows are rarely if ever attacked. This disease comes on usual-ly within twenty-four hours after calv-ing, but in some cases not until several days after. It may come on at any season of the year, but it occurs more frequently in pasture season than at other times, and especialty when pas-tures are at their best.

make a delicious three-pound cheese make a delicious three-pound cheese, good after four weeks and better with age: Take five gallons of sweet milk, cream and all if it has set for a while, Heat until about milk warm. Dissolve one-half of a No. I renner tablet in one-half teacup of cold water. Stir well into the milk, add a tablespoon of salt, remove the milk from the fire and let remove the milk from the fire and let stand. In from three to seven minutes it will become thick like clabber. Let It stand two or three minutes longer when it is ready to cut or break up. Then with the hand, spoon or some other article stir the clabbor or curd as it is now called. This separates the curd It is now called, This separates the curd from the whey. Let it stand and the curd will settle to the bottom, when the whey can be poured off. Then with the hand, press the pieces all into a mass or ball. Take a cheese cloth sack made for the purpose, or a flour sack, slip the lump of curd into it, and hang up to drain. It will drain in half an hour if the curd in the sack is broken into pieces twice in the half hour. When it has drained, take the curd and slice or cut up into small pieces, say an inch cut up into small pieces, say an inch thick, put into a crock and pour over it very hot but not boiling water. Stir with a spoon and let it stand until the pieces seem like leather, which will be

biccs seem like leather, which will be in about three minutes. Take out of the water and again cut into piecets as it has probabaly run to-gether again. Salt as for butter and it is ready to press. For the press I take a gallon apple or syrup can and melt off the top and bottom. I make a top and a bottom for the can out of an inch board, and call them followerers, to fit inside of the can. Set the can over one follower. Grease the can well with butter, also grease a cloth and lay it in the can, letting it make a sack with the ends over the outside of the can. Then put in the curd, fold the ends of the cloth over the top, lay on the other follower and set where it can drain with about ten or fifteen pounds of follower and set where it can drain with about ten or fifteen pounds of weight placed on top. Let it press for twenty-four hours, take out of the press, remove the cloth, grease the cheese and lay on a plate in a screen bex. Butter the outside well, and turn it over every day until used.— Phabe Journey turn it over ev Phebe Journey.

SYMPTOMS.

The disease makes its appearance within twenty-four to forty-eight hours after calving, but may occur before. It usually follows an easy birth. On the advent of the disease the con On the advent of the disease the cow becomes uneasy; moves about rest-lessily, stamps, strikes the belly with hind legs, grinds the teeth and may have spasms or general convulsions. Symptoms of paralysis come on after this period and the cow shows weak-ness, staggers and falls. As the paralysis advances the cow becomes stupid and passes into a semi-conscious condition with her head turn-ed around to one side toward her flank and resting on the ground. This is the

ed around to one side toward her flank and resting on the ground. This is the characteristic position. Later on the eyes become glassy and are not sensi-tive to the touch. The disease can read-ily be ascertained by the recumbent position and the glassy. Ilfeless ap-pearance of the eye. The tongue is par-alyzed, saliva runs from the mouth, the guilet has lost the power of motion. gullet has lost the power of motion and the animal cannot swallow; di-gestion is arrested and bloat may oc-

#### PREVENTIVE TREATMENT.

Sometime before calving the cow should be milked and be put in a should be milked and be put in a loose condition. This latter can be done by feeding green food only and by oc-casionally giving a quart of raw lin-seed oil or one pound of salts with an ounce of ginger. The food should be laxative and fed sparingly. Grain must be withheld until all danger of milk fever is over. The animal should be encouraged to drink fots of water, take lots of exercise and be kept in a comfortable place. By this kind of care many cases of milk fever can be prevented.

#### CURATIVE TREATMENT.

CURATIVE TREATMENT. Do not drench after the animal goes down. Place in a cool comfortable spot, draw out every drop of milk and then distend the udder well with air. To pre-vent the escape of the air, tie the teat tight near the end and await results. An ordinary milk tube attached by a small rubber hose to a bicyle pump will serve the purpose well. The teats and milk tube should be disinfected before the latter is used. Care must be taken that none of the disinfectant enters the udde. This treatment is inexpensive and worthy of a trial. "The writer has used this treatment only a few times, but has secured gratifying results. This treatment, ac-cording to reports from all parts of the United States, appears to be a sure cure for milk fever. "Partice using this treatment will con-

Parties using this treatment will confer a great favor if they will report the results to R. W. Clark, Professor of Animal Industry, Utah Agricultural College, Logan, Utah.

# A SIMPLE WAY TO MAKE CHEESE

I am sure if many farmers knew how easily and most inexpensively cheese can be made at home the people living on our western ranches would enjoy more of this noruishing food. Here are the directions which if followed will
