Poison oak Poison Ivy

are among the best known of the many dangerous weeds and shrubs. To touch or handle them, or to quickly produce swelling and inflammation with intense itching and burning of the skin. The eruption soon disappears, the sufferer hopes forever; but almost as soon as the little blisters and pustules have reached the blood, and each time it breaks out at regular intervals, and each time in more aggravated form. This poison will enter the system for years, and every atom of it must be forced out of the blood before you can expect a perfect, permanent cure.

First Trial

Relieved Piles.

From Geo. C. Glick, Owens Mill, Mo.: "Some time ago I bought a package of Pyramid Pile Cure for my wife who had suffered very much. The first trial did her more good than anything she has ever tried. It is just what is claimed for it for curing her completely." For sale by all druggists. Little Book "Piles, Cause and Cure" mailed free. Pyramid Drug Co., Marshall, Mich.

FOR Nature's Antidote

S.S. Nature's Poisons,

is the only cure for Poison Oak, Poison Ivy, and all noxious plants. It is composed exclusively of roots and herbs. Now is the time to get the poison out of your system, as delay makes your condition worse. Don't experiment longer with salves, washes and ointments—try never cure.

In Hooper. The Bishopric and a committee conducted the happy affair. At 11:30 the meeting began with prayer and an interesting program was provided, consisting of reminiscent speeches, songs and recitations. The sisters prepared a sumptuous dinner, which was enjoyed by all present. After dinner the balance of the program was carried out, and at 4:30 the Bishop made the closing remarks, wishing all a happy New Year and adjourned in singing "Old Lang Syne."

SUNDAY SCHOOL REVIEW.

On Friday, the 3rd, the Sunday school rendered a review of the exercises of the past year. Much credit is due the superintendent and teachers for their untiring labors which was shown by the ready response of the students. The weather continues very foggy and many clouds of smoke contracted from the damp atmosphere.

IRWIN, IDAHO.

Little Snow - Range Stock Doing Well - Serious Accident.

Special Correspondence.

Irwin, Bingham Co., Idaho, Jan. 6.—Our winter here is exceptionally fine at present, there are scarcely any snow, range horses are fat and cattle are doing well without much danger of starving.

The health of the people is good. The measles, it is believed, is a thing of the past, as no more cases have been reported.

HORSE FELL ON HIM.

Bishop Jacobson's son, a lad about 19 years old, was riding on horseback and the horse slipped on the ice and fell on the boy's left leg and it was feared at first that it was broken, but they have about come to the conclusion that it is only severely bruised.

A Deep Mystery.

It is a mystery why women endure Backache, Headache, Nervousness, Sleeplessness, Melancholy, Fainting and Dizzy Spells when thousands have a far better time of it. Write Mrs. Phebe Cherley, of Peterson, Ia., "and a lame back pained me so I could not dress myself, but Electric Bitters cured me, and, although 75 years old, I am now able to do all my household work. It overcomes Constipation, improves Appetite, gives perfect health. Only 50c. at Z. C. M. I. Drug Dept."

SCIENTIFIC MISCELLANY.

The most sensitive heat-measuring instrument thus far devised is the radiometer of Prof. E. F. Nichols. This consists of a ball of bronze 2 inches square and 4 inches long, bored to serve as a case, in which is a thin layer of quartz fiber a tiny glass arm carrying at each end a blackened mica disc or vane about one-twelfth of an inch in diameter. The heat rays reach the vane, and the mica disc, which has a piece of glass in the back shows both vane and source of heat. Crookes has made known that a blackened surface in a partial vacuum is pushed back by heat, and when rays from a star are reflected upon one of the vane's arm is slightly rotated, the quartz fiber twisted to a degree that is carefully noted on a scale. At the Yerkes observatory it has been known by this means that the heat from Saturn corresponds to that from a paraffin candle six miles away, if none of the candle's heat were absorbed by the atmosphere, while that from Saturn only equals that of a candle ten miles off.

Scientific men and certain savages are aware that insects may serve as palatable food. The French entomologist, has tried several hundred species, both raw and cooked in various ways, and has further made himself an authority by collecting travelers' experiences. He has found that cockroaches, however, make most delicious soup; caterpillars are light and easily digested, and are relished not only by the French, but by American natives by the name of "caterpillars." The French entomologist, has tried several hundred species, both raw and cooked in various ways, and has further made himself an authority by collecting travelers' experiences. PLEASANT GROVE.

CITY OFFICIALS BANQUET.

Epidemic of Measles - Fog Fades Away - Beet Growers Meet.

Special Correspondence.

Pleasant Grove, Utah Co., Jan. 9.—The outgoing members of the city council gave a banquet to their successors in office last night. The supper was prepared at the Mayhew house, the dance was given in Clark's opera house. It was a "swell" affair. The banquet was held at the Mayhew house, the dance was given in Clark's opera house. It was a "swell" affair.

The beet growers of this section met today in the city hall for the purpose of discussing the question of petitioning the sugar factory for a raise in the price of beets for the coming season. They want 25c advance per ton and a reduction in the tax on "beets," the growers seem to be "in earnest."

KANOSH.

THEATRICALS AND BALLS.

Furnish Holiday Amusement - Fatal Accident Befalls Geo. Turner.

Special Correspondence.

Kanosh, Millard Co., Jan. 4.—We are just closing the festive season in this part of Zion, and evidences of joy, peace and plenty have been seen in the homes of our people. The students are returning to resume their studies at the B. Y. A., Provo and Beaver, and taking others with them. We have had theatricals by the "Forest" traveling company, and a very creditable performance. The young ladies also gave "Ruth Basset's Rescue" for the benefit of the "Forest" traveling company, and a very creditable performance. The young ladies also gave "Ruth Basset's Rescue" for the benefit of the "Forest" traveling company, and a very creditable performance.

WHITE AND RED

Pale blood—pale face—poor health; Scott's Emulsion—red blood—rosy face—good health; that's the order of events.

Our first lines give a condensed history of many cases, chiefly young girls at school. For some reason girls of that age are frequent sufferers from pale blood—a real blood starvation.

Scott's Emulsion, a clean, white medicine, makes rich, red blood and rosy faces. It is blood food.

Scott's Emulsion, a clean, white medicine, makes rich, red blood and rosy faces. It is blood food.

The curious properties of elongating on exposure to smoke. The treatment consisted in heating the finger which was still or horse-shoe for two or three minutes in a 6 to 10 per cent solution of commercial soda, and then drying while slightly stretched in a tube from which the air had been exhausted. Just what change in the properties of the skin is produced by the treatment is not known. The presence of smoke is found to have an invariable effect, however, and a smoke detector alarm has been patented which is made to act through the closing of an electric circuit by the lengthening of the finger.

A primitive process that is a marvel of old-time ingenuity is claimed in the Russian method of storing petroleum. A strong and expensive iron tank is built, and instead of the oil entering of cheap sheet iron is suspended in water on piles, the top projecting a foot or so above water level. This tank is filled through a pipe passing to its center the water side of the oil enters. The plan has other advantages besides inexpensiveness, for if the oil should take fire some of it may be drawn off from the bottom, and as there is only water at the bottom, the oil will not accumulate in the tank.

In a recent comparative test of pavements, the average temperature of macadam was 102 degrees; of asphalt, 105; of gravel, 105; of water, 105; of wood, instead of asphalt, is thus shown to be the hottest material. Other tests showed advantages for macadam especially over asphalt as it retains water longer, and the oil enters the dust on it can more easily be kept laid. Asphalt is dustier than macadam, as its surface is being constantly pulverized and it is not easily kept wet.

Hydrogen, hitherto regarded as harmless, is believed by Dr. J. C. McWalter, of Dublin, to act as a mild poison when long inhaled. The ill effects of the gas are usually confined to the electric light stations, where accumulators, rising off hydrogen, were used during part of the day.

HOTEL ARRIVALS.

Knutsford—W. E. Annin, Denver; Harold Spelden and wife, A. C. Kenyon, New York; H. H. Leggett, Chicago; R. E. Grier, Springfield; O. R. Small, Silver City; W. S. Osborne, Denver; Mrs. C. Conner, Los Angeles; Jno. Knox, Chicago; Robt. McVicar, Chicago; G. W. Whitton, Chicago; J. N. Lanson, Denver; H. Engels, San Francisco; P. A. Coxhead, San Francisco; W. J. P. Enfield, New York; E.
