

## LOCAL AND OTHER MATTERS.

FROM TUESDAY'S DAILY.

**GONE EAST.**—Joseph A. Young, Esq., and Willard Young, his brother, left for the East this morning. The latter goes as cadet to the West Point Military Academy.

**GONE TO CALIFORNIA.**—We learn that Edward L. Sloan, Esq., editor of the Salt Lake *Daily Herald*, left this city on Sunday afternoon, for a business and pleasure trip to the Pacific coast.

**SOCIETY MEETING.**—The Parent Society for the Improvement and Cultivation of Stock held a meeting last evening at the City Hall, and after attending to the business brought before it, a motion was made to adjourn subject to the call of the President, which was unanimously carried.

**MACHINE TO CATCH AND KILL GRASSHOPPERS.**—Brother A. W. Winberg, blacksmith, of this city, has invented a machine, a model of which he exhibited at this office a few days ago, which he believes would prove very effective in catching and killing grasshoppers. It can be manufactured for about seventy-five dollars, and two or three of them would be sufficient for the largest settlements in the Territory. If it could be demonstrated that the machine would be as effective as its inventor believes, it would be a highly profitable investment for the people in localities infested with these pests to jointly contribute for the purchase of the apparatus, so that they could be easily and quickly destroyed by machinery. The following is a description of Brother Winberg's invention:

It consists of a frame, drawn by two horses, having an apron extending forward close to the ground to scrape up the locusts, with a hood above it forming a box open in front. At the rear of the machine is a pair of rollers, geared together, the upper one driven by the carrying wheels of which it forms the axle. Whatever may find its way into the front of the machine is obliged to pass between the rollers at the back, which being capable of being forced close together, are apt to completely demoralize the "iron clads."

**RECIPE TO PREVENT LEAD POISONING.**—It is not an unfrequent thing for parties working in the mines to suffer excruciatingly through being lead poisoned. An easy means of preventing or curing this malady would be of great value to miners. Such a recipe was recently forwarded for publication to the *White Pine News*, for the general benefit of miners. The author says:

"For the benefit of persons engaged as laborers in the lead mines of Nevada, I beg to present you with a copy of a recipe for making 'Sulphuric Lemonade,' the free use of which will most effectually prevent poisoning from lead in almost every instance. As a medical man, I do not hesitate to advise the free use of it by men who work about furnaces and in the carbonate lead mines."

The following is the recipe:

"Molasses, 16 pounds; bruised ginger, 1 pound; water, 12 gallons; baker's yeast, 1 quart; bicarbonate of soda, 1 1/2 ounces; sulphuric acid (by weight,) 1 1/2 ounces. Boil the ginger in two gallons of water, and then add the remainder of the water and molasses hot. When nearly cold transfer the whole to a cask and add the yeast, to cause fermentation. When this has nearly ceased, add the sulphuric acid, diluted with eight times its quantity of water. Close the cask, and in three or four days it will be ready for use. Careful abutions in water, containing a small quantity of sulphuric acid, will greatly add to the efficacy of the remedy, or rather preventative. A general warm bath, in which a little of the acid is incorporated, taken twice a week, will do much good. The cost of the experiment, when contrasted with the loss of time, health, and sometimes life, caused by the pernicious consequences of exposure to the fumes from a furnace, or dust from the carbonate mines, is comparatively nothing."

FROM WEDNESDAY'S DAILY.

**PIC-NIC.**—The pupils of the Methodist school spent yesterday at the grounds of Mark Lindsay, in the capacity of a pic-nic.

**ST. GEORGE.**—Bishop David Milne, writing from that place, under date of the 19th inst., says that matters are very lively there, mechanics and others being exceedingly busy, and that improvements of various kinds were progressing correspondingly. Peace and health was being enjoyed by the people generally.

**FROM BEAR LAKE.**—Bishop William Budge, of Rich County, called last evening. He says when he left Bear Lake Valley, which was a week ago last Monday, matters were, generally speaking, in a very desirable condition. Considerable new land had lately been broken and brought under cultivation, and grain had been sown earlier and a greater breadth of it had been put in this season than in any previous one. Although the "hoppers" were at work, the Bishop thought the people would save the largest portion of their crops.

The new pleasure boat which had been lately launched on the lake, and to which allusion has been made in our Territorial

dispatch items, is well and substantially constructed, and of capacity sufficient to accommodate twenty persons.

**A DANGEROUS PRACTICE.**—We have heard of instances lately of transients traveling on the State Road stopping at dwelling houses along there, knocking at the doors and windows, endeavoring to gain forcible admittance and otherwise alarming and disturbing the inmates. An instance of this kind occurred on Tuesday evening at a house adjacent to the road, south of the city. Luckily for these contemptible disturbers of the peace the male head of the family happened to be absent from home at the time. As it was they succeeded in frightening the other members of the family. If such characters do not stop this kind of game they may get hurt, as they might come across some one who will teach them a salutary lesson.

**A CAUTION TO MOTHERS.**—The following is from the Ogden Junction of Yesterday:

"On Saturday last Mrs. Douglass, wife of Richard Douglass, of this city went to a neighbor's house on some business, taking with her child, a little girl about eighteen months old. An open box of concentrated lye was on the neighbor's table, and while the mother's attention was drawn in another direction the child took up and drank a part of the lye, which seriously injured, and endangered the little one's life. Proper remedies were administered, and the patient is now progressing favorably."

**FRUIT PROSPECTS IN THE SOUTH.**—The following is from the last number of the *Utah Pomologist*:

"Since the settlement of this country, there never was a season when the prospects for fruit were better or more promising. As our orchards, vineyards, and gardens are young, the quantity, of course, will be proportionately larger for the yearly growth; and from present appearances, the quality and size will improve in like ratio."

"Apples, pears, peaches, plums, apricots, nectarines, cherries, figs and even the almond trees are generally loaded with fruit, and the small fruits and berries are equally prolific. In a few instances where the exposure to late frosts were the greatest, the apricot crop was injured, but this is not general."

The same journal speaking of the grasshoppers in that section, says:

"We are sorry to learn that these pestiferous insects, in great numbers, are visiting the fields and gardens of Parowan, Cedar, Kanarra, Belevue, Leeds, Harrisburg and both settlements of Long Valley, doing much damage; in many cases cleaning the land of all crops and verdure."

## HOME NEWS.

FILLMORE, May 22.

We have had a very heavy windstorm all day, which has blown part of the back wall out of G. Huntsman's new brick house; damage five hundred dollars. It has also blown considerable fruit off the trees. Numerous grasshoppers are hatching out in the vicinity of our wheat fields.

PARIS, Rich Co., May 22, via

Franklin, May 22nd.

Grasshoppers are very numerous. A good deal of grain has been destroyed and their work of devastation continues. Numbers of citizens and the Bear Lake brass band visited St. Charles yesterday, to witness the launching of a first-class pleasure boat. Mining is receiving considerable attention at present. Two districts have been formed and companies organized. Several lodes have been discovered, and the discoverers have great anticipations of their richness.

LOGAN, May 23.

The grasshoppers are terribly destructive in Paradise, Hyrum, Millville, and on the west side of Bear River. The people are fighting them.

The stockholders of the Logan Co-operative Institution met last night. The business of which was reported as flourishing. The following officers were elected: W. B. Preston, President; G. L. Farrell, Vice President; C. B. Robbins, Thomas Tarbet and Niels Hanson, Directors; Moses Thatcher, Secretary, Treasurer and Business Manager. The latter, for his two years managing, deserves praise. All have confidence that the business will continue to flourish.

The weather is very cold and windy. The hoppers have not done much damage to Logan precinct.

FAIRVIEW, 23.

The prospectors have returned and report that there are no silver ledges that will pay for working. Iron and coal are more promising.

Six hundred acres of farm and meadow land were taken up yesterday and given to such as had none or but little.

May-day was celebrated yesterday with enthusiasm, there being almost a general turnout of young and old to celebrate in a grove, three miles distant, and the young ones seemed to enjoy themselves well.

We are having a very dry Spring. But few hoppers are to be seen.

# MASSILLON AGRICULTURAL WORKS,

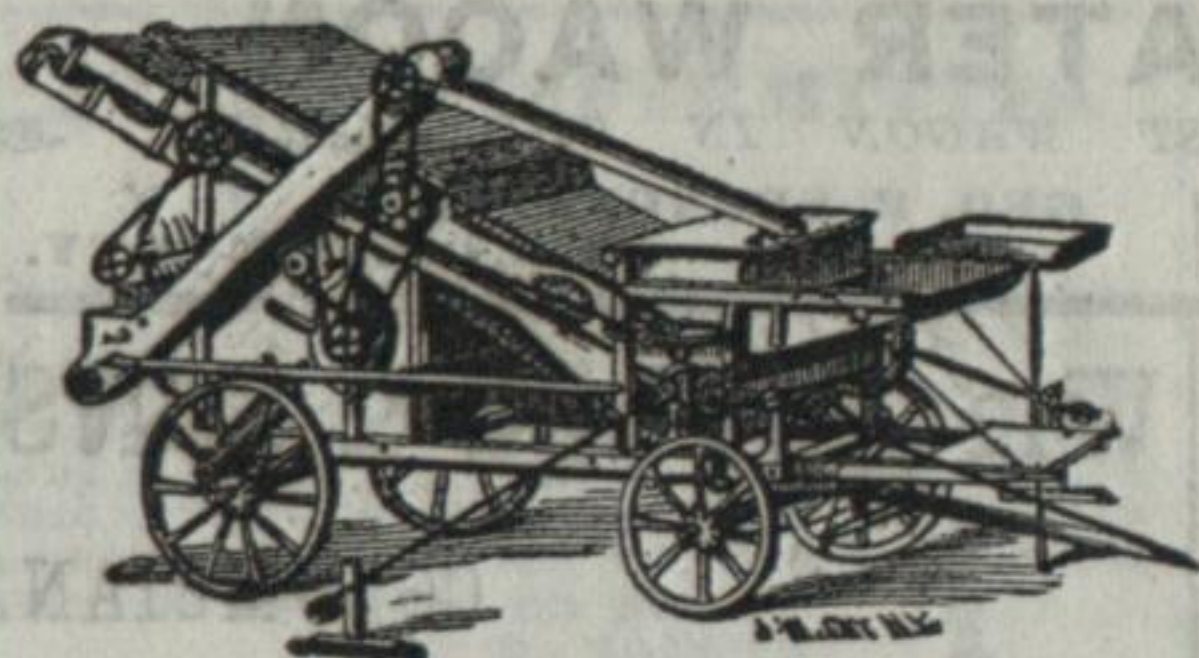

OHIO,

ESTABLISHED.....1842.

For the Manufacture of

## RUSSELL & CO'S

IMPROVED

Double-Fan Three-Hitch Gear

## Threshing Machines.

THE success achieved by this machine during the past season is without a parallel.

Over Eleven Hundred Sold

During the season just closed, all of which have given entire satisfaction. Men that have made a business of threshing for twenty years say that the **IMPROVED RUSSELL** will thresh and clean more grain of all kinds and do it better, with less power, than any Machine in the country.

### The Three-Hitch Gear and Pivot Cylinder

Has been found not only more convenient and durable than any other arrangement in use, but to run much lighter, and is less liable to get out of order.

### The Adjustable Concave

Has greatly increased its capacity for clean and speedy threshing, and the

### Separating Capacity

Has been vastly improved by the increased width of the Straw Carrier and the extra Beater in the second carrier.

### The Two Fans

Now used in this machine have more than doubled its capacity for cleaning—in fact it is

the only machine that will clean grain fit for market, and do it in such quantities as will justify a man in spending his time in threshing.

## DOUBLE-PINION HORSE-POWER,

With Russell's Patent Movable Center.

Russell's Improved Double Pinion Eight and Ten-Horse Power, with movable center, has long been in use, during which time it has withstood the most severe tests; and for light draft, strength and durability, it has no equal.

The movable center, as constructed by us, is of great value, for by its use the master wheel is allowed to adjust itself to the master pinions, so as to divide the labor equally, thus overcoming friction and removing, to a great extent, the liability to break by sudden jerks or starts of the horses.

### Russell's Patent Safety Coupling.

This inclosed safety tumbling-rod coupling is undoubtedly the best ever offered to the public.

### Straw Stacker.

Straw Stackers, single length, sixteen feet, or to fold, twenty feet long, either with or without canvas sides.

### Truck Wagons.

The Truck for hauling the Separator is made of thoroughly seasoned timber and ironed with the best of iron, and suitable for farm purposes.

SALT LAKE CITY.

## Pratt's Astral Oil!

WILL not explode or take fire if the lamp becomes upset and broken.

Burns in the ordinary Kerosene Lamp. Gives a clear, uniform and beautiful light, unequalled by gas.

Over 100,000 families continue to use it, and no accidents, directly or indirectly, have ever occurred from burning, storing or handling it.
