dressing station, and on to the field hospitals. The thirty-two stretcher bearers with their eight stretchers, forming two stretcher sections of sixthirty-two stretcher ir eight stretchers, forming two stretcher sections of six-teen men and four stretchers each, un-der the command of the second junior medical officer, set out from the col-lecting station, pick up the wounded left behind, by the regimental aid, carry them to the collecting station, and, having afforded such medical treatment as may be necessary, load them into the ambulance .wagons for transport to the dressing stations. The surgical work at and in front of

The surgical work at and in front of the collecting station, must, like that the collecting station, must, have that of the regimental aid, be of the simplest kind. At this part of the field no operative procedures can be attempted except the ligation of bleeding vessels; fractures of long bones should be put wounds should be covered with first field dressings without being wiped or cleaned in any way, or touched by hands or instruments. If more than this be done at the front infection of the wounds is sure to occur, and antiseptic or aseptic surgery, the great object to be aimed at by surgeons in warwill fare as well as in civil practice, rendered impossible or more difficult at the posts further to the rear.

the posts further to the rear. The amount and the kind of surgical work which must be performed at the dressing station will largely depend on whether or not the field hospitals are up and in their places. If they are close at hand and ready for the recep-tion of patients, the labors of the med-lcal officers will be considerably re-duced; but if not, all the primary sur-gical work of the battery must be done at the dressing station. In either case all the wounds must be dressed and rendered aseptic; a large number of rendered aseptic; a large number of primary operations will certainly be required; the provisional immobiliza-tion apparatus already applied to fractured limbs must be seen to as to its efficiency for its purpose; and stimu-lants and nourishment must be given to the patients to recover them from the more or less profound constitution-al shock which is usually present. As the patients are dressed they are placed in the ambulance wagons, which as they are filled, are dispatched to the field hospitals in charge of a corporal and

nd a wagon orderly. The second line of assistance is composed of the field hospitals and the stationary hospitals on the lines of com-munication with the base of operations,

The field hospitals are lightly equipped, moveable hospitals, capable of being easily and rapidly opened out and packed up. They are intended only for the temporary treatment of 100 patients each, and are supplied with wheel or pack transport, as the nature of the country may render ad-visable. They are divisable into half-hospitals, each for fifty men, when this may be required. No special hospital diets are supplied to them, the field rations, cooked as the medical officers may direct, and supplemented by such "extras" and "medical comforts" as they may order, being used in them; field hospitals are The lightly "extras" and "medical comforts" as they may order, being used in them; 'they are termed "non-dieted hospitals." The bedding consists of a blanket and a waterproof sheet for each patient, no bedstead being supplied. When suitable buildings are available these hospitals may be established in them; otherwise the tents are pitched, and they should always be placed as near to the dressing station as possible, so as to shorten the journeys of the am-bulances. There must be an ample water supply.

Field hospitals, it must always be re-membered, must advance with the membered, must advance with the divisions to which they are attached; during the active operations of the troops they are intended merely for the temporary accommodation of the wounded immediately after a battle.

A constant stream of convoys of sick and wounded must, therefore, be kept up from them towards the stationary he kent hospitals on the lines of communica-tion and the base. When an engage-ment is imminent, the field hospitals must be emptied, so as to be ready to move forward and receive the wounded from the battle field; and when this is impossible in the case of any partic-ular hospital, in consequence of the serious nature of the cases occupying it, it must be left behind to become itself a hospital on the lines of com-munication, and an empty hospital sent forward to take its place. During and immediately after a great

During and immediately after a great battle the press of work in a field hospital is usually very great. Large numbers of wounded men requiring immediate attention arrive almost sim-ultaneously. Food must be given them: many primary operations must be performed; fractures must be got into position and rendered immovable; wounds must be rendered aseptic and dressed—in a word, all the surgical necessities of perhaps 100 men, some of them slightly and some of them ter-ribly injured, will require instant con-sideration and treatment. These are not, in modern times, procedures which can be hurriedly performed, nor in a perfunctory manner; on the contrary, can be nurnedly performed, nor in a perfunctory maner; on the contrary, they require, to achieve the successful results obtained by scientific surgery, almost the same nicety of manipula-tion and care in detail which the bacteriologist expends on his experiments in the laboratory. Failure in the lain the laboratory. Failure in the la-boratory means only the waste of experiment; but failure to keep infec-tion from a wound, or to render it tion from a wound, or to render to harmless if it be present, means pain and, suffering from surgical infective disease, loss of limbs, and, in many cases, of life itself. The stationary hospitals on the lines of communication are more permanent and better equipped establishmentsthan those just described. They are "dieted

those just described. hospitals," that is, th those just described. They are "dieted hospitals," that is, the patients in them are fed, as closely as may be, accord-ing to the usual hospital diet scale. They are intended for the reception of 200 men, and stretchers, to be used as bedsteads are supplied for this number Datients can be treated in them until Patients can be treated in them until such time as they are sufficiently re-covered to bear the journey towards the base of operations without risk.

the base of operations without risk. They should be established in buildings, if possible but if nome are available, tents are supplied. The number of these hospitals which will be required on any particular cam-paign depends, naturally on the dis-tance the troops advance into the country, on, in fact, the length of the lines of communication, and on the character of the roads and means of transport from the front to the base. If a railway be available, if the roads be good, or if a waterway can be used, fewer of them will be necessary. In any case they should be placed as near to the lines on which the sick convoys travel as possible. travel as possible.

The third line of medical assistance in a campaign consists of the general hospital at the base and hospital ships.

The general hospitals at the base of The general nospitals at the base of operations are as fully equipped as the similar institutions at home, and they are administered on the same lines. They occommodate either 400or 500 men. To each is attached a military depot. Patients are treated in them until suffi-Patients are treated in them until suffi-ciently recovered to be discharged to the military depots, whence they are sent to rejoin their corps at the front; or, if unlikely to be able to take any further part in the campaign they are invalided to England for disposal as permanently unfit for service, or for further treatment. As many of these hospitals as the number of sick and wounded coming from the front require are oneed at the base. are opened at the base. Hospital ships are established at

places where the situation of the base of operations renders it possible, and the circumstances of the campaign make it advisable that they should be make it advisable that they should be employed. They are supplementary to the general hospitals at the base, and are as perfectly equipped as sta-tion hospitals at home. They accommodate 200 men, with an additional fity spare cots for emergencies. In connection with them steamships are employed for taking bad cases to Eng-land or elsewhere; these are specially fitted for the reception and treatment

fitted for the reception and treatment of sick and wounded men. Two medical store depots are estab-lished in most campaigns; one at the base and one at the front near the most advanced stationary field hos-pital. The regimental officers, the bearer companies and the field hos-pitals replenish their supplies of drugs, surgical materials and instruments surgical materials and instruments from the advanced medical store depot, and the latter is itself kept fully cyclipped from the one at the base, which receives its supplies direct from England.

the nursing duties in the field AH All the nursing duties in the held hospital are performed by the men of the medical staff corps, while at the base hospitals and in the hospital ships the ladies of the army nursing service are employed as well. The above, although a mere sketch of the medical arrangements laid down

The above, although a mere sketch of the medical arrangements laid down by regulation, will supply a fairly ac-curate idea of the means which are employed in warfare for the care and treatment of the sick and wounded. The regulations for the medical ser-vices give concise instructions as to how everything should be done. But rules must be made to give way to circumstances, and regulations cannot and need not be too rigidly adhered to when other methods of arrangement when other methods of arrangement and distribution seem likely to pro-duce better results.

AT WINTER QUARTERS.

Our labor as missionaries of the ause of Truth being in a section of cause of country over which, many years ago, our pioneer brethren and sisters trav-eled, camped and enjoyed the meager comforts of a temporary home, while they were exlies in the wilderness, has awakened in us the desire to search for and examine the land marks they left behind them.

Between six and seven miles to the northwest is the little town of Flor-ence, one of those land marks. It was here that four thousand or more of the noble and brave of persecuted Israel landed in the summer and fail of 1846, and founded Winter Quarters. From among this little band all the able and rounded winter Quarters. From among this little band all the able bodied men and boys enlisted as part of the Mormon Battalion, volunteers to defend the rights of our country in the More and the rights of our country in the Mexican war, thus showing their love and devotion to the Union, though at the same time they or their families were not permitted to live in peace mitted to live in peace confines of the United within the States.

Florence, once Winter Quarters, is now a small place, uninviting in ap-pearance and at a stand still as to enpearance and at a stand still as to en-terprise. As we walked through the main street we noticed a barber's shop, two meat markets and two or three stores, which comprise the business portion of the city. The few inhab-itants are living in a scattered condi-tion. Most of the houses were in good condition. On a hill to the (west is a nice brick school building. Florence supports three churches, viz: Episcong. Florence viz: Fint supports three churches, viz: Episco pal, Christian and Presbyterian. Our attention was directed here prin

chally to look at the old burial ground where sleep the ashes of several hun-dred of those who so bravely fought and endured the trials of being plun-dered, burned out and insulted; re-
