NEWS OF THE DAY

GREAT ENERGY in the government navy yards east, preparing ships for sea.

Seven negroes killed by the people for committing an outrage in Grant parish, La.

"Most important" cabinet meeting under President Grant's administration held yesterday; Cuban complications the subject considered.

Several southern papers are in favor of war with Spain.

The trend trial progressing. Business at the New York Stock Exchange less lively on account of the war feeling.

In the suit of Lamar vs. Chas. A. Dana, for false imprisonment, verdict in favor of Dana.

Big hoax on "Change at New York" yesterday—many telegrams received by the brokers announcing the death of Commodore Vanderbilt.

Duke of Edinburgh and the Russian princess are to be married, in St. Petersburg, by the Dean of Westminster.

Several changes in the British cabinet, by the Bank of England, under Irving and Farley, of the New York police, dismissed.

The body of a girl, dead and outraged, found in a wagon in Brooklyn, yesterday morning.

A meeting over Cuban affairs in St. Louis, to-night.

It is said that only eighteen of them on board the Virginia when captured will be spared.

The leading London papers hope the United States government will avenge the Virginia slaughter.

Bombardment of Cartagena going on all day Thursday.

The Netherlands government waits an extradition treaty with the United States.

The Madrid press thinks the U.S. cannot make a demand on Spain because of the unpleasantness in Cuba.

Murder and lynching in Southern California.

A foundry and twenty houses destroyed and thirty families rendered homeless by fire at Carlton, New-Brunswick.

Three thousand French Communists in prison still awaiting trial.

The eminent Parisian banker Bischoffshelm dead.

Political situation in France again becoming critical and the German government has paid three millions more for bonds of the U. S. funded loan.

Stephen H. Alden has entered an action against Daniel Drew for alleged swindling.

The Congressionalists of Brooklyn are excited over some remarks made by Mr. Beecher.

France is watching France and increasing her military reserves.

A GOOD WORK

This company of five hundred emigrants from Europe, who arrived in this city yesterday (Thursday), constituted the last installment of a group of 2,000 who have been brought across the ocean and the continent to Utah the present season. This is a material addition to the population by that source, being at the rate of about two per cent. to the whole population, or at about the rate of 800,000 persons for the whole country. We are safe enough in assuming that no other Territory or Ocean State, and probably no western State can make any such showing.

This good work for Utah has been accomplished mainly through the self-sacrificing labors and devotion of the people of the Territory. Indeed many of the emigrants have been brought, wholly or partially by means of cash sent for the purpose by the people residing here.

If the people of other Territories would follow the example of Utah, instead of spending so much of their means in useless personal extravagance, they might send tens of thousands to their population every year, and some of them, California for instance, appear to be very anxious to increase their population by emigration as they can, provided it is from Caucasian and not Mongolian peoples. This emigration to Utah is from Caucasian peoples and from the most desirable of the Caucasian nations too. California boasts incomparably greater agricultural resources than Utah, to say nothing of the rich and extensive mineral resources of that State, and if her people had made as well directed exertions as the people of this Territory have done in this direction, California might this year have increased her population by an emigration of between ten and twenty thousand souls, but the most desirable European-Anglo-Saxons and Teutons.

This is not the only year in which this good work has been carried on by the people of this Territory. They have been engaged in it, more or less, annually during the quarter of a century since the settlement of Salt Lake, and every year has brought its corresponding results, all accomplished notwithstanding the oftentimes greater superior attractions presented to emigrants by other Territories and States, and notwithstanding the bitter opposition, the malignant lies, and the shameful slanders of certain parties in and out of the Territory, some of them federal officials, to their disgrace be it said and held in remembrance.

The vast importance of this good development, so productively and persistently carried on by Utah, cannot be easily estimated, and can hardly be overestimated, but it is work which deserves national recognition, for without doubt it has accelerated the building of the transcontinental railroad and the development of these mountain and Pacific Territories and States to a full generation. If other Territories and States would make half the exertions in this way that Utah has made, we should never have hundreds of artisans and nearly a million of farmers and stockmen in America, and Europe in disemployment, disgraced and slandering.

GUANO.—The guano from the State, is reported to have been

Some persons found on board the captured steamer Virginia, appear to be men of strong indignation, and it might not be difficult to work it up to a pitch that would cause the majority of the people to look with favor upon a high handed attempt to wrest the "Gem of the Antilles" from the grasp of Spain and annex it to the United States. The Federal government, however, will be likely to act advisedly in the matter, and not take precipitate action that might be regretted afterwards. A determination to uphold the honor and dignity of the "Stars and Stripes" is plainly enough manifested in the naval preparations announced in our dispatches, and it is probable that at least a stricter watch over the interests of American citizens in Cuba will be the result of the Virginia affair.

MAIL FELLOWS.—An exchange has the following affecting paragraph—

Moved by the sore distress of the times, a dog and a box of food, his care formed a business meeting of the times, the dog and fighting each other's battles, and sleeping at night in the same little bed.

That reminds us that it is much the same here with the chief promoters of that memorial with which it is designed to afflict Congress in a few weeks, in hopes of the relief for the dogs and the dogs.

THINKS HE'LL STAY ANOTHER YEAR.—The Denver Democrat this discusses about the whereabouts and wanderings of an old and we wish we could say honorable acquaintance—

Rev. Dr. Newman, the lucky divine, who was sent abroad as an inspector of consulates, finds his new occupation so much more agreeable and lucrative than his former one that he has signified his intention to remain another year longer, expecting by that time to see much of the world as he wants to, and to be ready to resume his professional studies with increased vigor. He is a handsome man and free passes for himself and wife and good things to have in any family, and we are glad that Newman appreciates the honors which have fallen to his lot. His good work will be accomplished by his inspection of consulates we leave to the imagination of our readers.

BY TELEGRAPH

LAST NIGHT'S DISPATCHES.

WEST INDIES. TRIALS CONCLUDED.

HAVANA, 13.—The trials of all the prisoners on board the Virginia have been concluded; only eighteen will be saved from death.

Of these several are engineers or mechanics, and the remainder are men of various trades, and some of them are said to be very good.

Four or five will be set at liberty; the remainder will be condemned to the chain gang.

Evening 14.—The Diario of Cienfuegos, says that fifty-seven of the Virginia captives were shot at Santiago on the 10th instant.

GREAT BRITAIN. Vengeance Urged.

LONDON, 13.—The shooting of the crew and passengers of the steamer Virginia is commented on at length by the morning journals, all of which express the hope that the executions will be avenged by the U. S. government.

Canonizing.

A Catholic dispatch says that canonizing was contemplated all day yesterday notwithstanding the violent storm. The city has received a large supply of ammunition. The British consul is the only representative of a foreign government who remains in the place.

At the Shrewsbury meeting, today, King, Lord, Flear, second, and Victoria third. The contest at the start was nine to one against King, 35 to 1 against Flear, and six to one against Louise Victoria.

PRUSSIA. Three Millions Paid.

BERLIN, 14.—The German government today made a further payment of three million dollars for bonds of the United States funded loan.

NETHERLANDS. Treaty Warded.

THE HAGUE, 14.—The minister of justice, yesterday, informed the Chamber of Deputies that it was necessary to conclude an extradition treaty between the government of the Netherlands and the United States.

SPAIN. The Press on the Executions.

MADRID, 14.—The Imparcial has an article, to-day, on the execution at Santiago, and endeavors to show that it is not possible for the U. S. government to make any demand on Spain in consequence of the fact that it is not possible for the majority of the American people to see the Spanish republic united and successful. President Grant and his associates know this, and are not likely, the Imparcial says, to retard the progress of the republic by precipitating complications which internal troubles demand all her strength.

FOREIGN. NEWS BRUSWICK.

ST. JOHN'S, N. B., 14.—A fire broke out this evening at the Allen foundry, at Carlton, on the west side of the harbor, and continued to burn fiercely until the foundry and some twenty dwellings were entirely consumed, leaving some thirty families homeless. The steam fire engines have been called from St. John's to assist in subduing the flames, but a strong westerly wind blowing and the strong gusts of rain and fumes are estimated that the water will leave the slips before the fire is got under control. The loss will be heavy.

FRANCE. Completion of the War Budget.

PARIS, 14.—The situation at Versailles is again becoming complicated. The conservative Right and Left threaten to fall through. The Government has decided to insist on the unconditional presentation of the MacMahon's term for ten years. The Minister of War has persistently carried on by Utah, cannot be easily estimated, and can hardly be overestimated, but it is work which deserves national recognition, for without doubt it has accelerated the building of the transcontinental railroad and the development of these mountain and Pacific Territories and States to a full generation. If other Territories and States would make half the exertions in this way that Utah has made, we should never have hundreds of artisans and nearly a million of farmers and stockmen in America, and Europe in disemployment, disgraced and slandering.

NEW YORK, 14.—St. John A. Alden, a street operator, had brought

he charges with inducing him to buy eleven thousand shares in Quaker Oats, which he sold at 63 cents, and he claims in his affidavit that while he was buying the stock under Drew's representations Daniel was unloading upon him.

The Herald publishes what purports to be an interview between the Captain-General of Cuba and one Col. J. M. Young, wherein the former proposes that the latter organize an expedition in the U. S., composed of all the Cubans it was possible to enlist, to embark on board a steamship and then give such information as would lead to the capture of the expedition.

For this service Young was to receive \$20,000. The Herald says Young is now in Chicago, awaiting trial for alleged a P. O. money order. The forged interview is said to have taken place in 1878 and the latter is said to have made a statement to the members of the expedition captured would be shot.

[NOTE.—Young is in Illinois State prison at Joliet, Rockford.] The Brooklyn Board of Education, a business meeting of the Plymouth church, the last of October, it will be remembered that Beecher made a remarkable speech on the occasion of Titton's name being dropped from the church rolls, and that some of his statements were held to be in the orthodox, that a considerable amount of trouble has resulted therefrom to the credit of Beecher's authority for some of his assertions, and to learn wherein he goes the right to desire Congressional action, and to see that the Congregational churches of Brooklyn have appointed a committee to investigate the Plymouth church, and have the subject discussed and the matter explained. These proceedings have been conducted with the utmost privacy, but there is no question that all the Congregational churches in the city are moving in the matter.

AN 80 year old resident of Sacramento received a severe blow on the back of his neck in the street, a few evenings since, but he turned on his assailants and they fled.

A Yamhill, Oregon, boy has killed one hundred gophers in the past season, and received as a reward from a farmer a horse, a new hat and a pair of boots.

A "Gay Lothario" Norman by name of Sherman, Placer county, Cal., was hidden through the town on a rail by the inhabitants, for a week, and was finally captured by a school teacher.

The San Francisco Board of Education has adopted a resolution requiring that changes in text books shall only be made, under the supervision of a committee, which shall exclude jobbery.

Twenty of the Gilroy, Cal., exiled ruffians, dropped into the city, and thought to stay, but the Gallinas think of inviting the ruffians to move on.

Wyoming coal in the locomotives on the Southern Pacific Railroad is causing some complaint. It gives out too much sulphur and distillates, which cause soot to pass passengers.

A Chinaman in San Francisco successfully repulsed the successive attacks of a street gamin and a butcher, and when two or three other white men made a rush for him, he ran and hid in a saloon, and was finally rescued by the police.

Dr. A. Andrie, of San Francisco, has discovered a new method of treating the disease of gonorrhoea, and has been successful in curing many cases.

Dr. Ernest Gulson, in an inaugural dissertation, presented to the faculty of Bernes, states, though he has arrived at no positive conclusion, he believes that as in cholera, the form of the contagion of rabies is formed by one of the lower fungi. This period of incubation, upon an average, over five or six weeks. The poison is then absorbed into the system, and is carried by means of the circulation, and especially of the medulla oblongata. Dr. Gulson then enters into the prophylactic treatment of the disease, and gives the following clinical observations: "A man was bitten on the hand by a dog in the street, and shortly after died from hydrophobia. Two days after the bite, the man applied to Dr. Gulson's father, who cauterized the wound deeply with potassium permanganate. The man recovered, and was cured of hydrophobia. The symptoms of hydrophobia became prominent in the patient, and he died in a few days. The man was bitten on the hand by a dog in the street, and shortly after died from hydrophobia. Two days after the bite, the man applied to Dr. Gulson's father, who cauterized the wound deeply with potassium permanganate. The man recovered, and was cured of hydrophobia. The symptoms of hydrophobia became prominent in the patient, and he died in a few days. The man was bitten on the hand by a dog in the street, and shortly after died from hydrophobia.
