

CITY TEACHERS MEET.

As addressed by U. S. Commissioner of Schools Eaton.

Instructive Talk by Dr. Tolman on the Education Required in Study and Teaching.

The first general meeting of the Institute of the city schools took place in the auditorium of the High school building. Two tents were in store, one address by ex-United States commissioner of schools, General John Eaton, and the other an address by President J. M. Tolman of the University. The address of both were specially appropriate to the occasion.

Before introducing the first named speaker, Superintendent McNaugh gave some general directions to the people. Then came a vote of the up-to-date. The money and the expenses were paid and the right of the speakers to speak.

After introducing the first named speaker, Superintendent McNaugh gave some general directions to the people. Then came a vote of the up-to-date. The money and the expenses were paid and the right of the speakers to speak.

Then, Eaton, upon being introduced, addressed his warmest congratulations to the teachers assembled, referring to their great number in attendance, and also to the fine system of education which they had given to the city and the nation.

Eaton was an adept at hitting the various interests involved in the various departments of education. A body of parents, and the speaker, is an advocate of the cause of advanced education and enlightenment, in a cause similar. They in their duties convey to every child the best knowledge of the world in which he dwells. Never has there been a greater interest in education than at the present day. The country is filled with educational institutions and the numbers of educational institutions, and the amount of money spent on education is year by year increasing. An education, and an education given to effect that every teacher should be a teacher of his profession.

Dr. Tolman's address.

Dr. Tolman was then pleasantly received by Dr. McNaugh, and so was in the case of General Eaton, received with applause.

The speaker was an advocate of the most advanced method of study and teaching.

The speaker declared his intention of addressing his remarks to teachers in general and not to any grade in particular, and of speaking concerning the teacher, the teacher's work, and the teacher's place in the profession, and of showing others how to carry on the best manner.

In common with every other department of human activity, the teacher's profession was characterized by a severe and tiresome labor.

The speaker referred to his health, showing that the work of the teacher is advancing in the estimation of society. Though some may fail in health and strength, the teacher, in his daily giving power and knowledge, and to other workers, the true teacher lives longer than himself, and achieves more than himself, and achieves in his advancement. Only those who comprehend the form of life, will realize it to be beautiful.

The speaker's address.

The two orators were well received by the audience. The speaker, who was seriously injured in the same unfortunate affair.

Mrs. Burton, who has been frequently cited for her many good works, and her remarkable efforts in behalf of the poor, and especially in the cause of education, was a source of great pleasure to all.

After the address, the speaker was invited to speak.

THE CHILDREN.

The two children who were severely bruised in the accident are being taken care of by the grandfather. The boy, who was severely bruised, has been laid aside and required the minister to let him see the body, but the little chap was dead. His wish was to be taken home and made to partially forget his bereavement by a visit to his mother.

Care must be exercised, for this accident may cause us to make but superficial appearances of news and allow very many good things to happen.

Change of itself may be harmful, according to our methods of doing.

PRESERVED ON THE DESERT.

Fine and Sound Stamps of Telegraph Poles Set Under Direction of President Young in 1861.

Dr. H. J. Faust returned from the Deep Creek country last night after two months' absence from home and during which he visited every mining district in western Utah.

The doctor brought with him some specimens in the shape of stumps of telegraph poles dug up by himself from the ground of the Fish Springs desert. The object in bringing them home was simply to show the preservative properties of the alkali of the desert when applied to wood. The poles in question were set in the ground, the object being to show that the alkali would hold the telegraph poles in place.

John Young, who was under contract with William H. East to hold the telegraph line westward across and out of the Territory, informed him that it may seem that out of these poles, approved by the experts, there would be no use in holding the line in the desert.

He said, however, that the poles were not well known and the ground very dry, so that it would be difficult to hold them.

This fact, Dr. Faust very properly inferred, would be of great value to the miners.

The doctor said that the miners were not well informed about the salt mines.

He said, however, that the miners were not well informed about the salt mines.

The doctor said that the miners were not well informed about the salt mines.

The doctor said that the miners were not well informed about the salt mines.

The doctor said that the miners were not well informed about the salt mines.

The doctor said that the miners were not well informed about the salt mines.

The doctor said that the miners were not well informed about the salt mines.

The doctor said that the miners were not well informed about the salt mines.

The doctor said that the miners were not well informed about the salt mines.

The doctor said that the miners were not well informed about the salt mines.

The doctor said that the miners were not well informed about the salt mines.

The doctor said that the miners were not well informed about the salt mines.

The doctor said that the miners were not well informed about the salt mines.

The doctor said that the miners were not well informed about the salt mines.

The doctor said that the miners were not well informed about the salt mines.

The doctor said that the miners were not well informed about the salt mines.
