short time is sight of the first Greenland town I had yet seen. It was in keeping with the scenery around. In the midst of Esquimus huts rose, the only mansion the residence of the Governor, a midst or his wife, his children, and his pipe. The courtesless of his humble nunsion were cordially extended to us, and spirits to incl. and light it, will serve as the small quantity of lard taken with then, with the smell at home as on board our little brightness much at home as on board our little

and gun I mude two sallies at Fiskemaes and one at Sukkertoppen, into the deep mountain gorges, where the water, caused by the snu's genial rays, had melted the snow that trickled down the mountain sides, and at last found a resting place, around which grew a highly interesting and quite lawriant flora. Upon the southern slopes I found the willows, as if determined to force a living out of the world, clinging apparently to the solid rock, and, though stunted in growth, looking noless fresh than members of the same family growing in our own rich soil. The catkins of these plants were found to be of very deficient developement. The same was also observed of the Anaromida Totrigone, one of the characteristic though a most delicate morsel, it has so often

creature!—their only pusture ground. The sen, advance has enabled us to collect interesting facts affords them occasionally an inadequate supply as to the zones of the gulls and petrels.

At Breven we had the first opportunity of tes-

house to the native's but; and good coffee do they been happily, in a great measure, overcome, and make. At the inspector's signal credit is due our Mr. B. confidently thinks he will be able to take

These dogs are a necessary part of an Esqinnax. Thus for we get on happily and well—each one settlement, and seem to mingle with the natives in every way seeming determined to do his less to in about equal numbers and forms of the greatest familiarity—living in many cases in the same but one striking peculiarity is observed, was their hudble control of the con

wesiward by some prominent headland, against ceded by some nulneky pappy who may have the floating ice in the early spring. In this selection great experience and judgment are required, but in our commander's significant into required, but in our commander's significant into require confidence. Here we will be frozen in during graitfule and affection they hold for him; and he the search for Franklin will be made.

will expire before a boat and sleigh party will set equally. We look auxiously for the event out to continue that which could not be accom- store for us; and if the restoration to a syn tor is not very communicative as to his intenits fortunate members. They take with them at rest with regard to his face, one of the light fadia rubber houts constructed Yours, very tr

early Icelanders and Norwegians, and when the suspended intercourse with the Old World gave rise to the fable of a lost Greenland, its discovery was due to Frobisher or Cabot, those indominant, and the cooking spenders. To the efforts of a single man, Hans Egode, the Greenland by the Lutheran charch, the Greenland of the present control by the Lutheran charch, the Greenland of the present control by the Lutheran charch, the Greenland of the present control to the present control to the present control to the following will be of the complicated man and so the three forms of a single size of the governor general of China, and is the terminant by the Lutheran charch, the Greenland of the present control to the present control to the following and the cooking spenders and Norwegians, and when the suspended intercourse with the Old World gave rate of being the most skilful thieves in the sore and extracting and silver mines. In the second of the steady discovered gold and silver mines is of considerable importance in many respects. On Military Affairs—Horace S. Eldredge, A. P. On the 1st of July, he extended his search to different articles. Nothing will be taken that can be the the time of the index of the time of the present control to the form of the most skilful thieves in the sore and with discovered gold and silver mines. Incomposition of the time of the time of conditions are made with discovered gold and silver mines. Incomposition of the many respects. On Military Affairs—Horace S. Eldredge, A. P. On the 1st of July, he extended his search to different articles. Nothing will be taken that can be a foundantly supplying its own population with food and luxuries. Simpherpool is the terminant of the present control that the time of the present control that of the present contury oves whatever it possesses Indian and Russian; while the complicated maof civilzation and christianity. of civilization and christianity.

We made the coast near Godshalar, the scene of his early labors, and I write from a point near simplified. Quantity and not quality with regard by opposite that neatest and most flourishing of to food, convenience, and not confort, with regard the settlements, Foodisminds, the Numery of to space, are the points considered. Every two On the 29th, being becamed off Fiskenines, we a simple change of clothing for each, to weigh no disputched a bout up the Flord, to look out for the more than twenty pounds. Thus the Arctle town; returning soon, with a pilot boat and crew traveller's wardrobe is ten pounds, including a from the Governor, we stood in, and were in a pair of canves boots, to be used in the homeword where time in sight of the first Greenland town I journey. Pennican is almost the only food to be

At both these places, while my comrades were bustly engaged in husty proparation for departuration from port, I made the best-use of my time in collecting hotanical specimens. With botany hox and gun I made two sallies at Fiskemass and one at Subbashayan is to the dear waventing generally generally agreed by horse the state of the manual property of the dear waventing generally generally agreed by horse the state of t

volopement. The same was also observed of the Anaromida Totrigono, one of the characteristic heaths of this region. These circumstances seem to our commander to indicate a backward summer, whilst the increorological returns obtained at Fiskemaes and Sichteufels, show a winter of unusualemiduess. The borgs too are not numerous, and he seems to expect we will meet no floe ice until we reach Melville Bay.

Disco we longed to visit—a longing which the bight of its high mountains only increased, but the breeze I suppose did not justify as la losing an every few minutes procured several fine cliers.

Disco we longed to visit—a longing which the miles to the southward, for the purpose of prosight of its high mountains only increased, but the breeze I suppose did not justify as la losing an inch of ground, for we stood on to the northward in expectation of reaching the middle loc. But one thing more remains—in increase of dogs—for deficiency of which we are humbly thankful, as but for that we would not see the settlement of Proven.

Proven.

Proven, July 20, 1853.

Proven is not unlike the settlements previously visited, except that, in being further to the north, its inhal itants a proportionately poor and wretched. It is, with one exception, the most northern of the Dunish settlements on the threshold of the great barrier of Melville Bay. The secuery around presents the same barren pictures queues characteristic of, the Greenland coast. Here resides the royal inspector, a clever oid Dane, possessing u small fortine obtained through his office, an Esquar wife and good beer. His one story manison, looking atheast as old as the hills, presented a ground appearance beside the miserable huls of the natives. Built as they are of stones covered with sodo rooss for winter, and seel skins for summer, they look more like the houses, of bury and additional proposed of the consensed of the consensor of the political proposed of the consensor of the political proposed of the consensor of the consensor of the consensor of the political proposed of the consensor of the political proposed of the proposed of the political bird. The bry abounds in guils, and of these fine specimens for the consensor of the political bird. The bry abounds in guils, and of these fine specimens for the consensor of the political bird. The bry abounds in guils, and of these fine specimens for the political bird. The bry abounds in guils, and of these fine specimens for the political bird. The summer, they look more like the houses, of bury and politically afterwards them occasionally an inadequate supply

At Breven we had the first opportunity of tesplarable.

It is the custom of the coast, brought from the fatherland, to set before the stranger the welcoming cup of coffee, after particling which, like the sait of the Arabs, he may consider himself at home. This custom extends from the Governor's prehended in the working of the chemicals have house to the native's but; and good coffee do they good Esquinaux histess for her skill in coffee pletnres with a great degree of decency, even in making, and the natural case with which should the highest latitudes we may be able to reach. It the house. We have here procured some fifteen or twenty enabling us to bring back such material as will Esquinana dogs, but as the number is less than make this little frequented portion of our globe half a supply, we will be obliged to step at Apmore familiar to you. The glaciers will form an

One striking peculiarity rouserved, was their anaddling together, and tuning, their pipes to the notes of a chosen leader, who occupies the centre of the pack, the whole sottlement, young and old, set up a chorus loud and shrill, that lasts about the control of the pack of the pack of the pack. The pack of the pack o set up a chorus loud and shrill, that lasts about five unautes.

Leaving Proven and the civilized world at our backs, we will in an hour be pushing forward to the scene of our explorations. This is, as you are aware, Smith sound. How far we will be able to penetrate with our vessel into this unknown region, will depend upon the point at which nature has thrown up her impenetrable ice barrier. Its waters have only yet been sighted by previous navigators of the region, and we have every reason to hope that we may be able to conduct our exploration into this unknown and mysterious quarters of our planet. Once arrived at the terminus of our voyage, winter quarters will be selected at a point protected to the northward and westward by some prominent headland, against

he search for Franklin will be made.

For this search the most active preparations ro going on. Once at anchor, but a few hours will expire before a bout and sleigh party will set with continue that which employed to continue that which employed the continue that when he shows any favors.

The afficers and men of our little party fare equally. We look anxiously for the events in plished with the vossel. This party will consist thising world and devoted family of the man who, of nine, all of which have, I believe, been selected, us all hands have volunt-ered; but the docobscurity, we loops at least, with God's blessing tions and we are in ignorance as to who will be to bring back some thing which may set the world

The present may be for it or of those crisis, which, we have seen, it was fed. The present may be for it or of those crisis, which, we have seen, it was find the ies fed tho most enterprising communities of the old world, four and twenty centuries of the old world four and twenty centuries.

Kertich is the favorite Russian port of

the peninsula. It occupies the site of the ancient Pantikapeon, the capital of the king dom of the Bosphorus and the scene of the fulfilled the grand expectations so foolist city of Theodusia, robbed the Crimes of its commercial importance, cut off all penances of prosperity from the ports of the sea of Azof, and crippled navigation; to nll this without any profit worth speaking of to itself, and without the least prope of ever rising above the low condition; which it is doomed to vegetate, both by geographical situation, and the nature an configuration of the adjacent regions.

The place has no intrinsic commercial sources, and is deficient in all those thing for which Kaffi is remarkable as passess ences in trade. Poter could make a cityin Kaffa stant. mate and scenery of this peninsula have been on the site of the ancient Theodosia, one of the most magnificient of the hundred colonbarian invaders of the Roman Empire.

After an interval of more than a thousand

years, the place, under the name of Kafa again became impurtant, as a Genoese s tlement. The Venetians soon destroyed but it recovered itself immediately, and m til the capture of Constantinoplo Turks, it was one of the most opulent chin in the world. In 1475, twenty-two year later, the Turks took it, and for five gene ations it was a poor place. In the serenteeth century, however, its consequence re vived, it was called Little Constanting by the Turks, and contained 80,000 inla itants. Russian acquisition of the Crime proved fatal to the city, which now has be some four thousand inhabitants. To Russian sway has proved as fatal to it

Turtur capital, Simpherpool being then it second city of the country. Catherine i lowed the Tartars to retain exclusive posses sion of it, in consequence of which it ha retained most of its oriental character .-The traveler, we are told by one of the fa fernity of wanderers, would foncy himse in the heart of the East, in walking through stantinople. But it is especially courts, gardens, and kiusks of the haren of the old palace, that the traveler may we believe himself transported into some decious abode of Aleppo or Bagdad.'

The Serni (palace) remains one of the liambra, in some respects. The situation the palace is singularly beautiful, and soil that of the town, which is approached by is literally oppressive from the fragramed he blossoms of the peach, the apple, thenicot, the almond and other fruit trees. Baliclara is now a Greek town, not far from Sebastopol. It was a favorite snot with the Genoese, and has a fine bay. One travels compares the town to Herculaneum or Por peil. from its antique appearance; while st other says that, 'with the Greek population its girdle of rocks, and its mild climate, resembles those little towns of the Arch polago that are seen specking the horizon :

one sails towards Constantinople." As a naval station, this town might b made a Sebastopol, in miniature, and not very much dimished from the original, alte

Here, again, the scenery is of surprisit beauty, and everything is of the most plea-ing character, that nature has made.

Malta was in the Hellenic times a place much importance and beauty but is not chiefly remarkable for the latter. It is

The decline in the production of wheat is give it a new start in that long career white There are only two watering places within 150 very remarkable, the land which for centurit has led. The present may be for it or
