CENTERVILLE.

Patriarch John Ford Celebrates 94th Natal Day - Deep Snow.

Special Correspondence.

Centerville, Davis Co., March 10.-On Friday evening, the 8th inst., Patriarch John Ford of this place celebrated his 94th birthday, and in the evening en tertained many of his relatives and neighbors in a social way. Although bearing the weight of so many years, Father Ford is very active and does as much manual labor as many a man does at fifty.

Ward conference was held at this place today. Counselors Grant an Clark of the Stake presidency, Elde B. H. Roberts of the First Seven Presi and dents of Seventies, Elders John W Joseph Smith and John Walsh Woolley. of the High Council, and Patriarchs Ezra T. Clark and John Ford were present, and participated in the pro-ceedings of the conference. All of the ward authorities as heretofore organ-ized were sustained in the various positions. The ward is in a very satis-factory condition, and the quorums and organizations doing fairly good work. Snow in the mountains east of here is said to be about fifteen feet deep.

Couldn't help getting a cold never cures it; but carrying home a bottle of BALLARD'S HOREHOUND SYRUP and using it as directed, will cure the worst kind of cough or cold. Price, 25 and 50 cents, Z. C. M. I. Drug Dept.

Nearly Average Conditions Up to February 28.

Boise, Idaho, March 8 .- The depth of snow in Idaho affords a very promis-ing outlook for the farmers and stock growers. Reports from various secgrowers. Reports from various sec-tions of the State to the U. S. weather bureau up to Feb. 28. Indicate hearly an average snowfall. Since January glist, 1901, the depth of snow in the mountains increased over the Bear Lake drainage area, a few sections of the Snake River watershed, and re-mained practically stationary in other parts of the State. It is thought the water flow will be sufficient for the needs of vegetation in the Bear Lake district and an abundance in the Ca-mas Prairie, Wood River and Lost River sections. In the Boise Basin the snowfall is slightly below the aver-age, and over the Owyhee mountains and the parts of the State that are drained by the Clearwater, Salmon and tributaries of the Columbia river the snowfall has been exceptionally light. It is thought that heavy rains hav-ing coursed in the two the averby many who decline to engage in growing sugar beets, is the expense in cident to thinning and weeding. When t is learned how to kill nearly all the weeds the previous summer and fall as outlined, more attention will be paid to sugar beet culture." "The results of the season of 1900,"

said Mr. Willfams, "indicate clearly the value of early spring plowing, on lands that were not plowed in the fall, and the continuous working with the land to destroy weeds before planting. The matter of destroying weeds was a large item in growing the beet crop last season. The early rains, that were practically the only source of molsture or the greater part of the crop, gave a tremendous impetus to the weeds so that a part of the benefit of early moisture was worse than lost. This was the cause of an entire failure in some localities."

FORESTRY FOR THE ARID WEST.

The division of forestry, through its section of tree planting, has succeeded in arousing widespread interest in the subject of tree growing on the plains of the upper Mississippi valley. An agent of the division has recently returned from that region, and reports that the farmers in the territory west of the Mississippi and north of the 40th paralel of latitude are awaking to the importance of planting trees, especially for economic purposes. The planters of this section are anxious to avoid the mistakes made during the operation of the timber claim act. The groves now being planted are designed to be permanent features on the homesteads.

To that end, the farmers will use a greater proportion of long-lived, slow growing species than formerly. The demand for such hardy, drouth-resist-ing species as the hackberry, green ash, white elm, bur oak, red elm, red cedar and western yellow pine (bull pine) oromises to be greatly increased during the next few years. The greatest pres-ent difficulty with which the prospective tree planter has to contend is the fact that commercial growers of nursery stock are not supplied with this kind of material. The nurseries still carry large quaintities of the short-lived kinds, such as boxelder, cottonwood, maple and willow, but are short on the more valuable species.

The planting of conifers on the prai-ries of the West during the past has not been attended with general success. This is owing to the use of eastern and introduced kinds that are not adapted to the country. There is abundant evi-dence, however, that the red cedar and western yellow pine (bull pine) thrive throughout this section. The The desirability of evergreens for wind-breaks on a bleak prairie should lead owners to turn their attention to these hardy na tive species,

No one knows the unbearable torture one undergoes from piles unless they are so filicted. TABLER'S BUCKEYE PILE OINTMENT is a quick, safe and painless cure. Price, 50 cents in bot-tles, Tubes, 75 cents, Z. C. M. I. Drug

No historic record shows when the constellations were mapped out, says Prof. Simon Newcomb, but the names given indicate that it was in the heoric age. No map extant gives the exact age. No map extant gives the exact placing of the figures by the ancients, although Ptolemy has designated as precisly as he could the position of partioular stars on the supposed body of each hero, goddess and animal. The figures could not have covered the enthe heavens, and in order that every star may belong to some constellation, modern astronomers have marked out irregular patches, each including the entire figures recognized of old. The outlines are still so inexact, however, that a single star may be placed by two astronomers in two constellations. Dr Gould has tried to remedy the confusion in the southern hemisphere by changing the boundaries of the constellations to straight lines running east and west and north and south, but this arrangement has the objection that the direction of the lines will change, owing to precession. Astronomers generally now recognize eighty-nine constellations In the entire heavens, the ancient south. ern Argo being counted as four distinct constellations. Copper poisoning is becoming quite common, according to Dr. H. A. Kurth, although it is not always recognized. The first symptoms are dyspepsia, anemia, and nervousness and irritability, the patient soon becoming emaciated. losing strength and acquiring a drawn anxious expression about the mouth. If working in copper is continued, the case usually goes from bad to worse although some persons acquire a tolera-tion of the poison. No specific is known, and the practical remedy is change of occupation.

Duffy's Pure Malt Whiskey The World's Famous Medicinal Whiskey

Coughs, Colds, Bronchitis, Asthma, Consumption, Malaria, Fevers, Chills and Dyspepsia of whatever form, uickly cured by taking Duffy's Malt Whiskey. A teaspoonful in a glass of water three times a day.

water three times a day. Gentlemen: I have had nervous dyspensia for overten years. I was to wask I could hard y wak, and night after night could not sleep. I was dis-coursged, and I took my case in my over hands, saying nething to any oue, and began using Duffy's Pure Mait Whiskey. I have taken the third bottle of it. I have not been so well in praise at fam at the present time, and my appetite is selen-did. I feel I can never asy enough in praise of Purty's Pure Mait Whiskey. I take it is hold water early every morning before breakfast. When I started taking it only weighed as venty dive pounds, and at present weigh one hundred and dree pounds. MARGUERITE F. Having isolated a new organism-s short bacillus-that proved occasionally fatal to rats, he has cultivated this organism in broth and on gelatine. peatedly passing it through rats and has thus greatly augmented its virulence. Of 200 rats fed on bread steeped in a broth culture, 80 died within three weeks. In a practical trial in store

and in some stables, a great decrease in the number of rats was apparent after the first scattering of the disease germs. An exhaustive study of the metals that may be used for pipes and con-tainers for petroleum and rapesced oils and acetic acid has been made by Her Gawalowsky. Crude petroleum is found to have no action on copper, nickel, aluminum, tin and iron, but may petroleum is affect zinc and lead. For purified pe-troleum, lead, copper, iron, brass, nickel, tin and argentan are suitable, al-uminum and zinc being less so, and besching bronze, wholly unfit. For phosphor bronze wholly unfit. For rapeseed oil mills, lead, iron, nickel and aluminum are recommended, zinc, tin. brass, argentan, copper-bronze and phosphor-bronze being excluded. In fermentation processes, tin, phosphor-bronze, lead, nickel and argentan may be used, but no iron, aluminum or zinc. Acetic acid should come in contact only

with nickel, aluminum and tin.

Electric smelting is a development that has been forced upon Swiss metal. lurgists by the scarcity of coal. Hematite ore from the Bernese Oberland near Meiningen, is to be transported by an aerial ropeway to the village of Innert Kirchen, where the electric smelter will be established. A concession has been obtained permitting the use of 60,-000 horse-power from the river Aar for generating the current required.

Paris is stated to have a characteristic odor which is perceptible in certain parts of the city, especially in the evening. It is described as a smell of heatIN THE DISTRICT COURT. It is thought that heavy rains hav-ing occurred in the northern counties at time when there was absence of frost in the ground will enhance the water flow in these counties. The snow in the Coeur d'Alenes lies principally in the canyons where it was blown by the high winds during the winter, and its true depth can not be accurately ascertained.

Friend to Friend.

It is not so much what the newspapers say, as what neighbor says to neighbor, or friend to friend, that has brought Chamberlain's Colic, Cholera and Diarrhoea Remedy into such general use. It is as natural for people to express their gratitude after using this medy as it is for water to flow down It is the one remedy that can aldepended upon, whether a baby be slek with cholera infantum or a man with cholera morbus. It is pleasant, safe and reliable. Have you a bottle of it in your home?

For all pulmonary troubles BAL. LARD'S HOREHOUND SYRUP, taken in the early stages, proves a certain and It is equally effective in sure specific croup and whooping cough, and if used in season prevents the further develop. ment of consumption. Price, 25 and 50 cents. Z. C. M. I. Drug Dept.

POINTS ON BEET CULTURE.

Importance of Early Plowing When Not Done in Autumn.

In conversation with A. H. Williams, the chemist of the Ogden Sugar company, the following points on beet culture founded on records of the company was given. Mr. Williams said

"The Importance of fall plowing is set forth in an article from the "New braska Farmer," of which the following is a copy: The majority of lands cannot be

fitted in proper condition for sugar beets if prepared in the spring. Even though some can be the process of killing weeds cannot be so thoroughly effected. This accomplished in the fall, leaving the land free from weeds, enables the cultivation to be performed almost entirely with the horse cultiva tor, thus reducing the hand hoeing and weeding to a miniumum. This at pres-ent is the most expensive item of sugar beet culture. It must be borne in that the proper preparation of the lands in the fall enables the planting to be done early in the spring, thus securing od stand, reducing the expense of cultivation to about one-half of the expense now necessary by methods now generally practiced. This emphatically means, that by proper selection of land, and by reasonable and thorough preparation the expense of growing a ton of beets can be done for one fourth of the present average cost as compared with unsuitable land prepared in the spring. The correctness of the forego-ing statement can be verified by intelligent observation and investigation. The practical and experienced farmer knows the advantage of early planting of spring crops, he also knows the ad-vantage of being able to use special

Rails in tunnels have been found by an English engineer to lose sometimes nearly four per cent of their weight yearly, those most affected containing an excess of sulphur. In north and south rails, magnetism increases the corrosive action of the moist vapors of the tunnel.

ages.

The ores of our mines were probably deposited by circulating waters. Dr. C R. Van Hise finds that the weight of rocks must close all cavities at a depth of 20,000 meters, and in most rocks at half that depth, so that the circulation of water and formatation of ore de-posits must be almost entirely confined to a thickness of five or six miles of earth's crust. Any body of ore may have been left by water in its descent from the surface in its between the from the surface, in its lateral flow, or In its ascent where it has been deflected unwards. Reasons are found for be lleving that the first deposits were at the lowest depths by the ascending currents, and that the later deposits by the descending and lateral currents were the richer and this view is confirmed by the experience that nine mines out of ten are poorer below the 300 meter level than above it, and still poorer below the 600 meter level.

The coldest day at Greenwich Observatory in the last sixty years was Jan.9, 1841, when the lowest temperature was 4 degrees. In this period of sixty years there were 162 days having a minimum temperature below 20 degrees, the greatest number in any one year having been 14 in 1855, while 1895 came next with 11 such cold days, and 1881 with 14 There were 22 years with no days as cold, the longest period having been four successive years 1882 to 1885 inclusive. An attempt has been made associate the very cold days with the sun-spot cycle, and there seems to be a tendency to greater cold before the

maximum of sun-spots than after.

In the attempt to solve the problem of the active agent in vaccine virus, Dr. Nakanishi has isolated a bacillus whose cultures resemble the diphtheria bacillus. Inoculation upon animals gave uncertain results. Tried in the arms of children, however, what seemed to be typical vaccine vesicles were pro-duced, and it is concluded that this bacillus is the active agent in vaccine virus and probably also of small-pox.

The total horse-power now expended The total horse-power now expended in electro-chemical industries is es-timated at more than 400,000. This gives a yearly production of more than \$150,000,000, of which the share of the United States is between 60 and 70 per cent, Germany and France about 10 per cent, each, Switzerland about 2 per cent, and England perhans 110 per cent, and England perhaps 1% per cent.

The increasing dread of rats that has arisen from their agency in spreading plague has led J. Danysz to experiment with a new means of extermination.

ed organic matter, and government inctors found it to persist after certain sanitary improvements had been made. It has been traced at last to the manufacture of superphosphates. The nose seems to be insensible to these in quantity, the odor appearing only at a distance giving sufficient dilution.
