## MINING, BUSINESS AND STOCKS

## FREE MILLING ORE ON THE SAN PEDRO

Two Prospectors Find a Gold Bonanza in the Hills South Of Moapa.

#### COSSIP AT THE ONTARIO MINE.

Items of Interest Concerning Park City Culled from the Record-The Mining Exchange.

Along the proposed route of the San Pedro road in Nevada some rich finds have recently been made, and a promising new field for the prospector is being opened up. With the completion of the new road, a hitherto inaccessable portion of a rich mining country will be laid open, and already several bustling camps have sprung up along the way. This section is comparatively new, and the discoveries so far made have been on the sensational order. A few days ago W. M. Blake and John Blunt passed through Caliente, enroute east. They have been pros-

pecting for several months along the Virgin river, in the mountains south of Moapa. Finding some extremely rich pieces of float, they searched for the ledge and succeeded in finding vein corresponding with the surface samples. The ore is a decomposed quartz, in which large pieces of free gold are easily discernable. The provpectors took out several hundred counds of this ore and brought it to Callente, where the gold was pounded out. Among the lot were some of the finest samples ever seen from that sec-The vehr is said to be 14 inches at the grass-roots, and constantly widat the grass-roots, and constantly wid-ening as depth is attained. If the vein is as rich, throughout as the samples, then indeed it will be a bonanza. From assays taken from the samples the ors runs over \$4,000 in gold to the ton. Mr. Blunt and Mr. Blake will return in the early fall fully equipped to take out the lakes they have discovered.

out the riches they have discovered Regarding the recent strikes "News" correspondent writing from Callente under date of Saturday, says: Callente, Nev., Aug. 20.—Geo. French brought in several sacks of high grade free gold ore from the Black Diamond group south of Moapa, and will have same assayed in Salt Lake. Brown and Wilson, who own the Old

Glory group of gold copper claims near Goode Springs, passed through camp this week with two sacks of native copper and grey copper ore, taken from a four-foot ledge on one of their claims. state that they have had assays of \$60 per ton in copper and silver and \$5 gold, and 21 per cent copper from another. Their group is bonded to Flick & Watson of Denver for \$20,000. They have 12 claims in the group.

Matt Turner and Ole Rosembaum

came through camp yesterday with two sacks of free gold ore, taken from their claims on the Virgin river, where they have a three foot ledge, which paracoarse gold freely. They state there are now over 50 prospectors located along the river, all seemingly doing well, and one Frank Pister, having erected an arasta where he is grinding out gold at the rate of about \$200 a week. This is the coming gold camp of southern Nevada, and will be open-ed up this summer when the San Pe-dro line is completed.

The tunnel of the Callente Gold Min-

ing company is now in 205 feet, and they have cross cut the hanging wall of the ledge, and expect to open it up on tonight's shift. The ledge is 20 feet wide at grass roots and shows free gold which assays \$32 to \$138 per ton. will start up mining interest in Caliente when cross cut as never before. About 30 claims are now located and recorded within three miles of Caliente.

#### TRADING LIGHT.

Daly-West and New York Leaders During the Morning Call.

The week opened quietly at the fore-neon call with the usual run of businoon call with the usual run of busi-ness. Prices ruled about the same as on Saturday and a few stocks were stronger at a slight advance. The de-parture of so many brokers for Port-land left a noticeable slump in the at-tendance, but the faithful few did their best to make thing lively. At the regu-lar call Daly-West and New York were the leaders and they occupied the atthe leaders and also occupied the attention on the open board. Daly-West opened strong at \$13.00 and went as high as \$13.17½ on the open board. Considerable New York changed hands at 5½ cents, a little Mercur at 32 and some May Day at 13½ cents. Following are May Day at 1% cents. Following are the quotations and sales:

UINTAH MOUNTAIN'S IRON ORE Deposits of Hematite in Utah Along the

Route of the Moffat Railroad.

The last issue of the Mining Report er, of Denver, contains an interesting article on the coal deposits of Utah, by A. W. Warwick, in which, after alluding to the iron fields of Iron counthe writer makes special mention the iron measures of Untah and asatch countles. Mr. Warwick says: Wasatch counties. Mr. Warwick says The deposits of Iron county, Utah have been attracting the attention of iron and steel producers during the last year or two, and from current reports the Rio Grande Western railroad is the Rio Grande Western railroad is contemplating the construction of a road for the express purpose of mar-keting those ores. Yet it is but a few years since, the writer remembers, that these deposits were looked upon as havring very little value from a commercial point of view. The construction of the Moffat road will also open up iron ore deposits of excellent quality, the deposits occurring in such a way as to insure a downhill haul from the flanks of the Uintah mountains. The close proximity of these deposits to the coal fields of Routt county and the excel-lence of the grade of iron ore greatly enhances the commercial value of these ores. From a number of analyses made would appear that the ore is remarkably free from sulphur and phosphoric

When the railroads reach the deposits of Iron county, Utah, and those of the Uintah mountains, we expect to see an impetus given to iron and steel manufacturing in the west, and the sight of western rails made from western ores in foreign countries will become so familiar as to pass without comment. The importance of an ample supply of high grade iron and steel at low prices to foundries and machinery manufacturers is so obvious as not to need di-

lating upon.

The iron mines of the Uintab range have recently been studied by Mr. J. M. Boutwell, of the United States geo-logical survey. From these studies Mr. logical survey. From these studies Mr. Boutwell concludes that there is at least one deposit of high grade workable iron ore (hematite) in the Uintah range. Mr. Boutwell's work also setties some interesting geological prob-lems, practically proving that the great red standstone series, the age of which has long been in doubt, is certainly ear-lier than the lower carboniferous.

The traditional absence of deposits of metallic ores (it is only a tradition based on error) in the Uintah range, the prospective development of this re gion in the near future, due to the build ing of the Moffat road and of the open-ing of the Uintah Indian reservation, give an interest to the geological fest-ures of this little known and practic-ally unprospected area. The Uintah range is situated mainly in the north-eastern portion of Utah, running, however, over into the northwestern part of Colorado. It has a length of about 150 miles, and an average width of about thirty-five miles. The elevation of the range varies from 6,500 feet to 13,486 feet (corrected) on Emmon's peak. The range is an elongated dome composed of a deeply dissected central plateau and encircling cuestas.

The iron deposits recently studied by

the geological survey lie just outside the interior plateau region on the southwestern slope of the mountains. Two deposits are described. One is located in Uintah county, Utah, twenty miles north of Vernal and eight to nine miles east of the point at which Green river enters Utah on the boundary between Utah and Wyoming. The ore in this deposit is a brown manganese iron of limonitic character. It outcrops as a bed three to eight feet in thickness at the crest of a hogback, and is traceable along its strike for several hundred feet. This deposit has frequently been visited by prospectors, who report traces of gold in the iron in a silicious gangue. It is generally reported by prospectors and others that the cre is of a good quality, but at the present it is too far from the railroad to admit of profitable exploitation and that, generally speaking, it is mainly of Green river enters Utah on the boundto admit of profitable exploitation and that, generally speaking, it is mainly of use as a flux. The other deposits are situated on the Rhodes plateau, and appear to be the principal metallic deposits so far developed in the Uintah mountains. The deposits are situated in Wasatch county, Utah, in the southwestern portion of the Uintah range on the main divide between the Provo and Duchesne drainages, at the head of Duchesne drainages, at the head of Scapstone basin, at an elevation of be-tween 9,600 and 9,700 feet. It is easily accessible by way of Provo river and Scapstone creek.

## PEARL CAMP IS PROSPEROUS.

The Ledge is Found in the Black Pearl That Was Discovered by Outsiders.

That was Discovered by Outsiders.

That the camp of Pearl, Ida., is not a dead one is shown in the recent encouraging news coming from there. In an interview with a "News" man, a gentleman from Pearl spoke most enthusiastically of the outlook and says that a great revival of activity has taken place in that section. The work in a great many of the best properties is being vigorously pushed and already the results are beginning to be noticeable. Especially at the Black Pearl property are things progressing in such a lively manner and every effort is being made to develop this property into a bonanza. At present the shaft is down over 300 feet, and the intentions are to sink at least another 100 feet. From the 300-foot level an upraise has been begun, which will an upraise has been begun, which will ultimately find an outlet in the drift on the 200-foot level. While prospecting on the property recently, a good sized ledge was uncovered and this is thought to be the rich find made some time ago by outsiders, who refused to make known its location to the man-agement. The results of the assays taken from this ledge have not yet been made public and considerable in-terest is manifest in the outcome. A large force of men is regularly employ-ed on development work, and also in prospecting the property. Extensive

mine, and something out of the ordi-nary is soon expected.

At the other properties in the vi-cinity the outlook is equally as bright.
The Lincoln mill is now running some the rich ore encountered in the refew days ago, and substantial returns vill soon be coming in. This ore shows considerable free gold and is easy millg. Considerable deep development ork is going on at the Checkmate and the whole camp is eagerly awaiting the results. The Whitman company is sacking some very high grade ore for shipment and at the same time not neglecting development work. The couth Lincoln company will soon be mong the busy ones of the camp. A line lot of new machinery has just een received and when this is set up the shaft will be started without delay. Pearl has always been one of Idaho's lost promising camps and the present right outlook seems to justify all the onfidence placed in it. The properties there have the making of some of the argest producers in Idaho.

# OF STATELINE CAMP

The Willowvale, Crown Point and Free Coinage Ledge is Clearly in the Zone.

#### PEARL CAMP IS PROSPEROUS.

Hematite in Utah is Found Along the Route of the Moffat Railroad --Miscellaneous News.

Mining conditions in Stateline district continue to improve, and from gentleman just in from this promising camp it is learned that considerable more attention than usual is being paid to properties clearly in the "belt," exclusive of the main properties of the camp, such as the Johnny, the Creole and the Ophir, included in the list being groups on the Willowvale, Crown Point, and Free Coinage ledge, which is understood to be the mother lode of the district, which is covered by the three properties above mentioned, as well as the Sunflower on the north and the

as the Sunflower on the north and the Silver Standard on the south.

The Free Coinage is now sinking a 5x8-foot shaft on the ledge, which, from a wdith of two feet on the surface has widened to six feet at a depth of 35 feet, the present depth of the mine workings. This work is being done by contract by Henry Hedges of Milford, who is using a horse whim. An average sample of the ore ussays \$4 to the ton in gold, and values are increasing with depth. and values are increasing with depth.
The Free Coinage is one of the first claims located in Stateline district, the location being made by George Rice, after whom satisfactory to its owners, of whom "Rice Mountain" was named.
The present showing in this mine is most satisfactory to its owners, of whom Mr. Hedges is one. The Free Coinage adjoins the Johnny mine and

the Margaret.
J. B. Smithson of Stateline has just completed the sinking of a 60-foot shaft on the Crown Point, from the bottom of which a drift has been run both ways north and south on the vein, which presents one of the most perfect hanging walls to be found in any mine. The shaft is sunk on the vein, and is all the way in ore, which measures about four feet in width on the 50-foot level, the values of the state of the shaft is sunk on the source. feet in width on the 50-foot level, the values running up to \$12. Hornings from the ore from the Crown Point reveal long strings of the yellow metal. The mine is owned by Mr. Smithson, John Ryan of Milford, and H. B. Prout

of Salt Lake.
At the Creole, of which W. H. Webber At the Creole, of which W. H. Webber is manager, the shaft has been sunk to a depth of 100 feet, and drifting is now the order of the day. At a point in the drift 60 feet from the shaft, a nice body of gold ore has been encountered, the extent of which has not as yet been determined. The Creole company is a new incorporation, and is based upon the Creole and Gold Haven claims; both patented properties. The Creole is the first gold location to be made in Stateline, and has produced made in Stateline, and has produced considerable ore, some of which was shipped to Sait Lake, the balance being milled on the ground.

The Johnny, in which has been consid-

erable exploratory work of late on the 300-foot level, broke into a fine body of good milling ore a few days ago.

### AMALGAMATION OF MINES.

Consolidation of British Columbia Mining Properties in Contemplation.

In a recent interview with the B. C. Review of London, England, Managing Director A. J. McMillan of the Le Ro Mining company, operating at Rossland, B. C., said that it was quite true that negotiations were on foot looking to the possible amalgamation of several of the largest companies engaged in mining in largest companies engaged in mining in that district, all of the mines concerned being well developed and well equipped, and each capable of producing a large daily tonnage of ore. He further ex-pressed the opinion that there would be many advantages in one company own-ing various mines with a large tonnage ing various mines with a large tonnage of ore of different kinds, and also owning smelters and mills, thus keeping within the company all the profits available. As nearly all the mines of British Columbia contain much low grade ore, it is desirable that ehey should be operated on a large scale, and thus secure all the advantages of economy in management.

Asked if the Le Roj was looking into the question of concentration, he re-

Asked if the Le Roj was looking into the question of concentration, he replied: "Yes, the matter is being looked into by us. Tests are being made on some of our ore at a mill we have rented near the Le Roj, and within a few weeks the result should be known. Most of the large mines of Rossland recognize that they will have to find some means of dealing with the low grade ore, of which there is such an abundance in the camp. If we can solve this problem satisfactorily, it will mean much to Le Roj shareholders and much to Rossland."

As to the condition of the mining in-dustry in British Columbia he said: "Mining is rather quiet just now. In the Boundary there is a hopeful feeling, partly accounted for by the fact that considerable railway building is going on there now. It is expected that there will be railway extensions into the Similkaneen country next year, and this will open up a well known mining district which has, up to the present, been without railway facilities, and therefore, not progressed very

#### AT THE ONTARIO MINE.

Items of Interest Concerning Park City Mines Culled from the Record.

Manager C. L. Rood returned to the city Thursday after having been at the Ontario for two days. He reports everything as moving along nicely and is of the opinion that if nothing unforeseen happens the engines at the mine will have steam turned into them, and be have steam turned into them, and be set in motion tomorrow or Monday. Of course everything will not be in first-class working condition for some time, but considerin geverything, excellent time has been made in the moving, rebuilding and re-constructing of the plant from the ashes of the destructive fire of two manths ago. Recarding the fire of two months ago. Regarding the condition of the shaft, nothing is known but that the water is up to the 1,500, or but that the water is up to the 1,500, or drain tunnel level, as it has been since 10 days after the fire. There is no reason to suppose, however, that any damage has been done, and after the water has been disposed of no further truble will be encountered. The water will doubtless be tanked out by means of large tanks or balls which will fill antomatically, lowered into the shaft. These tanks are already on hand, and will be tried as soon as the engine is set in motion.

#### STRIKE IN THE STEEN.

Sulphide Ore Which Goes High in Gold And Silver Contents.

"Yellow Jacket is keeping pace with the world of progress," said Angus D. Cameron, who came out to Salmon Tuesday on a hurried business trip. He reports a great new strike of ore on the Lincoln group owned by Dan Steen, and says the other properties are looking their prettiest and best, says the Herald, of Salmon, Ida.

Mr. Steen has been in camp for some time and has employed a couple of men at development of the Lincoin. A few days ago they opened a new place on the surface, where they were guided by the mineralized outcrop, and found a fine new body of sulphide ore which goes high in gold and carries copper, silver and lead. The Lincoln hill seems to be the favorite habitat of these metto be the favorite habitat of these met-als and some good fat fortunes are sure to be extracted therefrom. Mr. Steen is engaged in locating more ground. Mr. Cameron is interested with Den-ver parties in the Rising Sun Mining, Milling and Development company. They own a group of eight rich claims, also on Lincoln hill, south and west of the Steen ground. They have several veins of good ore, of a character simithe Lincoln

lar to the Lincoln,
Dan Hanley of Leesburg is now at

#### CONCENTRATES

Manager C. E. Allen is at the United States in Bingham today.

A two-foot body of pay ore has been incovered in the Advance mine at Mul-

Taylor-Brunton ore receipts for to-day are: One car from Bingham, four cars from Tintic,

P. J. Donovan, of Fay, Nev., who was in the city Friday and Saturday, re-turned home last night. The Globe Oil company, operating at

Fossil, Wyo., had a breakdown last week, and lost its string of tools. It is learned that the Johnny mill, at Stateline, is to go into commission again about the first of the month.

Jos. Dederich left last night for Beaver county to overlook the construction of the new mill at the Cactus mine. An exchange says that 300 men are on the payroll of the Sunnyside Mining

company in the Thunder mountain region, Idaho. L. G. Hardy expects the arrival, this week, of a carload of ore from his mine in the near vicinity of Battle Moun-

tain, Nevada. W. F. Snyder, president and general manager of the Western Exploration company, has arrived home from an extended eastern visit,

L. C. Doty, formerly superintendent of the mines of the Grioux Mining company, at Ely, Nev., arrived in Salt Lake yesterday with his family.

John W. Brock, of Tonopah, Nev., president of the Tonopah Mining com-pany, and of the Tonopah railroad, was in Salt Lake yesterday on his way east.

Col. T. L. Wiswall, local manager of the Greene Reduction company of New York, accompanied by O. H. Fairchild, E. M., the company's expert, will leave in the morning for Mercur.

I. E. Rockwell, of Halley, Ida., so well and favorably known in Salt Lake City, has succeeded Thomas Brennan as president and treasurer of the Del-la Mountain Mining company. The Summit Placer company, at Sol-

dier Summit, reports the discovery of mineral wax on the 300-foot level in new workings. It is believed that the force will be increased at the mine.

P. A. McKenzie, of Tuscarora, Nev., well known in Salt Lake, who is operating the property of the Eclipse Gold Mining company, at that place, has uncovered a four-foot body of \$15 and \$25 molecular like respective. \$20 gold ore in this property. T. J. Lynch, of Salt Lake, who, with

his associates, recently purchased the Last Chance mine at Reveille, Nev., is giving ebployment to thirty men, and eight heavy teams are hauling ore to the railroad at Tonopah. lon.

Reports from Hamilton, Nev., are to the interported that as soon as the new the effect that a big body of ore has

been opened in the Rocco-Homestake mine at that place, in which many Sait Lakers are interested. The find was made in the lower workings of the mine, and in virgin ground.

W. H. Clark, treasurer of the Trade W. H. Clark, treasurer of the Trade Dollar Extension Mining company, op-erating at Silver City, Ida., is now in charge of the mine during the tempo-rary absence of Supt. F. G. Clark, who is taking an outing at Big Springs with his wife and a few friends.

A. Lochwitz, manager of the Surrise mine in Park valley, Boxelder county, is in the city this week for the purpose of attending a meeting of the board of directors of his company. Mr. Lochwitz states that he has 10,000 tons of good milling occupy the dump availing. good milling ore on the dump awaiting the construction of reduction works.

the construction of reduction works.

H. S. Emlaw, E. M., a graduate of the Houghton, Mich., School of Mines, and who, for the past few years has been with Rice and Farrell of Park City, as manager of the Steamboat mine, has received a wire from Hon. A. W. Mc-Cune to meet him in New York for the purpose of accepting a position as general manager of the McCune mining interests in South America. Mr. Emlaw will visit relatives and friends in Michiwill visit relatives and friends in Michi-

V. P. Strange, E. M., and Peter Porter arrived in the city Saturday night from Goldfield, Nev., having secured a bond and lease on the Great Bend group in the Diamondfield country, neighboring with the Daisy and Vernal mines, the latter being owned by F. A. Keith, manager for the Tonopah Minning company, and the Brocks of Philing company, and the Brocks of Philadelphia. Mr. Strange, who is well known in Salt Lake, will return to Goldfield by the end of the week and will commence development work at

Tintic Miner: Joseph Phillips put & Tintic Miner: Joseph Phillips put a night shift to work on his lease in the Beck mine Saturday night. This is occasioned by Mr. Phillips' rich strike in the ground recently, and he intends to take out the ore and make shipments as speedily as possible. The strike mentioned heretofore is on the 1,300 level and the vein a continuation of the old Alamo workings from which such old Alamo workings from which such old Alamo workings from which such sensational results have been obtained by the Beck company in years past. The fissure is reported to be eight feet wide and the ore mined with but little waste.

C. E. Haviland, who has the contract or having the 28 tons of iron pipe to the Golden Eagle mine, started his teams to work today, says the Silver State of Winnemucca, Nevada. C. M. Harvey, superintendent of the Golden Eagle, left for the property this morning, where he will oversee extensive improvements to be made there in the near future. Several more cars of material will be received for the mine shortly, consisting of building material and other supplies, and from now on the work will be pushed rapidly until the Golden Eagle is made a producer. There are other good prospects in the same vicinity which will be developed as soon as arrangements can be made to open them up.

#### LOCAL MARKETS.

The local markets continue with no important changes. Tomatoes have gone up to 75 cents per bushel. Local pricots are out of the market, but vegetable marrow" is now to be had, and dressed veal and spring chickens are stiffening in prince. The prevailing figures for today, are as follow:

TIMBER PERMITS. Information for These Desireus of Cutting Ties on Forest Reservations.

C. T. Balle, supervisor for the United States government at Fremont, Wayne county, sends the following communi-cation to the "News," which will be of interest to timber cutters:

For the information and convenience of persons desiring permits for "free use" of timber, poles, and also in getting applications of different kinds filled out, the following will be the headquarters of the forest officers of the Fish Lake forest reserve for 1904; C. T. Balle, supervisor, Fremont, Utah. C. T. Balle, supervisor, Fremont, Utah. B. H. Robinson, ranger, headquarters Russell's ranch in Seven Mile; H. T. Albrecht, ranger, headquarters at U. M. creek, district No. 2; Wilford Tare, ranger, headquarters in the canyon received.

north of Danish Meadows on the U. M. creek, district No. I.

Any person desiring information or assistance on any matter connected with the Fish Lake forest reserve can communicate with either of the above officers.
