INGS BELOW COST, to  
Close Out.

51 and 53 South Main Street,  
Salt Lake City, Utah.

## HOOPER & ELDREDGE BLOCK

### A Friendly Curse of This

Another miracle worker has recently come into prominence in this vicinity, and the medical fraternity is attributing the cure to imagination, which, as all doctors know, is worth less of medicine in many cases. It seems an established fact, however, that a man who for years has been tortured with rheumatism several times as rapid as the normal, and who had consulted many eminent physicians without relief, got rid of his trouble between dawn and dusk of a single day after application of proper and holy relics, and that all of his ailing expatriates have since kept the priest's dose after, some of them going away in the belief that they have been permanently benefited.

The worker of these alleged cures, who attributes his success to divine aid, is a stalwart man of fifty years—a man of the kind whom the weak and credulous would instinctively obey, not for his name and accolade would follow—and if he has compelled a lot of hysterical and to some extent credulous people to believe in his power, it is not because of lack of faith in his own power, or lack of it. Such men are of an unimpeachable service to physicians, all of whom, in this vicinity, are surrounded by a lot of people who imagine themselves ill and who are sure they know what is the matter with them.—New York Cut, Chicago Tribune.

### Hostilities

A builder in Avila, a village in Champagne, was arrested by two gendarmes and taken to Châlons, where the judge d'instruction commenced the prosecution in the way usual to his calling by saying, "You are a thief and an assassin." After this preliminary he went on to remark that a number, accompanied by their last, had been committed in the neighborhood, and a small boy had given it so his opinion that the builder was the murderer.

The poor prisoner naturally felt indignant, and declared he was ready to prove an alibi. But of course he was not believed, and every day for three days he was marched through Châlons and Avila with handcuffs upon his wrists. At the end of that time the judge d'instruction said to him: "We were wrong. Your innocence has been proved. You are free."

"You, degraded and misled," added the poor builder, "What do you think will happen to me after seeing me let through the streets handcuffed like a felon?" The heart of the man was touched. "True," he said, "we have done you an injury, but now you are free. I am proud to be the hand of the builder a true free man.—Paris Letter.

### Electricity from Wind

On account of the comparative scarcity of water power in many parts of England for the generation of power for electrical purposes, attention has been given to wind power, of which the country is well supplied. A small experimental plant has been in operation at a farm near London, the windmill being used to run a small dynamo. The current is used to charge a storage battery, from which a number of arc and incandescent lamps are lighted nightly. Although the current obtained was small the experiment was

successful in demonstrating the value of this form of power for generating electricity.—Electricity.

### Making Jewelry in State Prisons

The authorities have decided to begin manufacturing pearl buttons and pearl jewelry in the southern Illinois penitentiary, which is located in Chester. Warden Murphy has returned from Albany, N. Y., where he engaged three experts to supervise the work. Appointments have been made for the sale of the entire product, and the manufacturing will be done on the state's account.

One hundred convicts will be employed in the industry, which, it is claimed, will not antagonize the free labor of the state.—Chicago Jewelers Weekly.

### For Singular Accidents

Annie Delamater, the eleven-year-old girl who was shocked to death, Sunday afternoon by a small rubber ball, was born in the residence of Mrs. Kline, 20 Henry street.

The child's father, a widower, who boards in Williamsburg, while going up stairs in the house where the corpse lay at 3 a. m., on the day of the funeral, fell backward down a flight of stairs. An ambulance took him to Guyver's hospital, where it was found that both legs were nearly gone, and he is now in a critical condition.—New York Sun.

### A Walking Engine

A New York genius has evolved a curious kind of a traction engine that has both wheels and legs. The end of the boiler is supported by two legs, which are attached to the wheels by a system of levers. The legs are operated by a system of gears and they work in pairs. The feet are clad with blocks of rubber to enable them to take hold of the ground. The inventor of this novel species of draft animal sufficiently asserts that it will get across as well as ahead and will climb any hill, but says that it is a "jerk road."—New York Journal.

### Successful Hunting

One day last week while George J. and Pat Wynne, of Oglethorpe county, were out hunting, the former found a couple of partridges on the ground, and, wishing to kill both, fired at them. He was then surprised on going to pick them up to find that he had killed not only the first he saw, but several other birds, some of which he had seen.—Meridian News.

### Five Losses for Last Year

An annual statement of insurance losses in 1891 being sent to prevent the payment of fire, the following figures are given for the statement of fire losses in the United States and Canada during 1891, which aggregated \$100,000,000, an increase of 20 per cent. over 1890.—New York Times.

### The Kansas-Bath Highway

The Kansas-Bath highway starts on the average about 40 inches at the shoulder, and is a little over 1 foot 6 inches in extreme length. The largest road we shall have here is a single highway, 28 inches around the curve. Their circumference of the curve was 14 inches and the distance from the top to the bottom of the curve

animal is very bulky in build, and the chest girth, which varied very little in the different specimens, was only 2 or 3 inches short of 3 feet. In spite of this it is as agile as a cheetah, and makes a killing of the most perfidious panther.—Blackwood's Magazine.

### The First Medical Publication

The first book containing medical characters was issued in 1493 from the press of the celebrated "Wynkyn de Worde."—Notes and Queries.

### Costly Wedding Presents for Sale

It is a pretty item in a story full of pictures that several of the presents originally bought as wedding gifts for the Princess May should now be more or less offered to the public, their intended destination having been a good deal of a disappointment to the bride. One lady additionally touched when one marriage is said to have resulted from the wedding gifts, which were sent her before her terrible trouble. Yet in a little shop in the Strand will be found a collection of the presents, a review of magnificent diamonds, which was brought in New York to present to the popular princess.

Another particular treasure is a supple, I was going to say a precious stone, but truth is to tell it is a piece, and its value is \$1,000. It is a perfect stone, without flaw, of exquisite color, ten inches long and 10 inches broad. At present it is set around with fine brilliants and forms a superb looking brooch. The other day it would be purchased brought his wife to see the present he proposed to make her, but she would have nothing to do with the jewel, "Oh, no," she said, "I should feel that a church window if I wore that." So the treasure of London of an old noble family is still in the market.—London Telegraph.

### Strange Mode of Disguise

The chief clerk of a gentleman in a northern county found a stranger according to his statement, who, without betraying any emotion, said he had come about the business. "Oh, yes," replied the clerk, "that I am in a hurry to keep my engagement just now. Come with me, and I'll tell you what I want done." The two walked out together, the stranger, talking about wallpaper and tulle, and the stranger answering with a glibness that seemed considerable experience, until they came to a policeman, when the clerk at once gave the pretended phisher into his custody for passing his house with unlawful intent.

Upon his way found the world instruments of the longhair's business, and when taken to the police station, was soon identified as an expert wiretapper, who was already quoted in several charges of larceny and burglary. People will be well advised to be on their guard when they deal with him, as he is a dangerous man.—Philadelphia Telegraph.

### Telephone for Use in Battle

Particulars of the behavior of the field telephone system in the French campaign are now being published. The Japanese telephone was used, as an example, in the battle of the Marston.

quart with him. The inventor was held in the land and the motor was added to the "cat." Combined receiver and transmitter were also played. A long tin snail was 0.6 inches in diameter was snatched from him and laid out of him's way on a bench, leaving the cat in triumph.

A line twenty-three inches long was this laid, with the addition of ten feet, in five hours' speech, was good, and the whole was taken up again in an hour. During a sharp fight a cavalry division passed over a long line without interrupting the communication. A locomotive in the ground made a good earth circuit, and the body of a cavalry horse of the wire was attached to the bell.—London Herald.

### Strategic Disposition

Much comment has been evoked by a recent occurrence at Wilna, in western Russia. The most of the batteries of an artillery regiment stationed at Wilna indignantly refused to salute one of their officers, whom he called among them. He summoned them more than once to pay him the duties of respect, but the soldiers paid no attention. The officer, enraged at this behavior, at length drew his revolver and shot two commissioned officers, one after the other. He was talking aim at a third when the soldiers, in fear of their lives, at length gave the proper salute. The incident is being hotly discussed in military circles, some officers maintaining that their conduct was justified in his case, while others condemn his extreme conduct.—London Times.

### A Strange Explosion

Both Williams and Morris McClelland met death in a mysterious explosion at Cave City, Ky. They were digging a cellar and had reached a flat rock eight feet down. Williams struck the rock with a sledge hammer, raising a terrific explosion, which killed McClelland, leaving him lying face down between two large rocks.—London Times.

### An Inquiry to Run Luck

By the death of Patrick Connelley, in Detroit, Tom Connelley, of Wilna, an engineer on the Atlantic coast, will get \$100,000. Patrick, the older brother, left Ireland forty years ago for America, and ten years later Tom came to America. About 1865 Patrick wrote to his family that he was rich and that he was leaving Australia for America, and they never heard from him again. He had lived in Detroit, it seems, for many years, but no one knew where he was.

At the recent term of the supreme court room of the French court, the judges were very much amused, and the members of the grand jury when dismissed presented in Judge Emery a pair of white gloves as an offering of the jury of the court's courtesy.

It is estimated that about 400 women are employed in American printing offices at from \$30 to \$500 a year. Also paying double the amount for the same work.

## ELIASON'S

AUCTION

SALE
