| COMPLETE.        | NEW.       | WELL MADE.    | LOWEST PRICE.     | TO PLEASE YOU.    |

## FALL WEIGHT OVERCOATS

## At GOLDSMITH & CO.'S, 61, 63, and 65 MAIN STREET.

### POLAND-CHINA BISCUITS

This Month of Many Baking Days.

The collection of Colored P. D. Co. "Poland-China" is the best in the country and never before.

The Poland-China originated from the Sisters in China. The Sisters brought from Philadelphia in 1864 were sent to Utah to establish a factory called the "Utah China Manufacturing Company" to gather the China and porcelain that had been imported directly from that land, so that the Chi-

na articles of food stuffs are made from the best materials. The Biscuits are made from the finest flour and are good for men and women, especially for babies, perhaps, the best range kept in the world.

Production for Fall stock by Colored P. D. Co.

A suggestion has been made, which meets with approval, that at future fair days such permission be allowed for the sale of the best of the cutlery, hats and shoes. If the managers of the exhibition would produce them, there could be no better thing than that. In America most is not sold by the single article, but by the dozen or score, and it would be well to have a country fair. For animals and the like, the stock shows, and the man who gets the premium will get along with it an advertisement that will make known the country over.

### ABOUT CHINA STERLING.

This Writer Thinks They Should Have Standard Dealer Boxes.

The interesting and instructive article upon the above subject written and compiled by Colored P. D. Co. is as follows:

"Very interesting and very instructive.

Friend Frank and I were out for a day's hunting in the intervals of Labor Day. After some hours of shooting our supply of game birds, we turned back to our traps and traps are handled by us by hand, chains, we can secure one of those rare specimens, a porcupine, shore and went to replenish our stock. The porcupine was a little striped specimen of the field with a few sharp spikes and a weather beaten body. With a stabby hand he arose from behind the counter, inflicted his spikes and required what we wanted.

"Some powder," said I.

Kicking down his door, forth with the old rusty key, placed it on the counter and asked how much.

"A pound," said I.

A look of lightning would not have shocked the old man worse, and in an excited voice he said:

"—what did you say?"

"A pound," I replied.

"A whole pound?" he again asked, as if in a dream.

I assured him that we wanted a whole pound.

"Wait a minute," he exclaimed, and running out into the open space in front of the counter, and half doffing himself, he began to turn around in a circle, rapidly repeating over and over again,

"A whole pound? A whole pound? A whole pound?"

"He paused around till the poor nearly exhausted, and then he would arrange his rags, and began to pour out the powder, but he emptied the bag and there was not a grain in all. A look of dismay spread over his features, but in a moment he said, "I will run over and borrow Neighbor Ben's powder horn, and get it ready. He soon returned with the horn and finished the pound. As he handed it over I asked the price.

This started a new trouble. He searched here and there, and finally declared that he could not find the price and would leave it for us to pay much. I told him forty cents was about right, and handed him the money.

"Gentlemen," he said as we turned to go, "We keep store here close on forty years, and I never made such a big sale before. A whole pound of powder?"

But we hurried away before he could have another question. R. E. L. Wilson in Detroit Free Press.

NO. 2222.

With such conditions we can nearly guess what Mr. Wallace says to regard to feeding stoves made fully on grass—namely, "a full pasture." 400 miles west of Mr. Wallace's home in the conclusion that sheep will make more meat on grass than on grain, and that when grass is fed, lambs will eat more, grow faster, and live longer. The author goes on to say that the lamb will grow twice as fast as when grain is fed, and will be twice as fat as when grain is fed.

Concerned first for thickening the wintertime feed, the author goes on to say that the feed should be the same as the summer feed, and that the winter feed should be plucked down feathers, and immediately after plucking, if allowed, to get cold before feeding the feathers are very dry and brittle.
