TAYLORE RESIGNS HIS POSITION

And Goes to Accept a Similar One in Colorado—The Stock Exchange—Dips and Spurs.

Special Correspondence to the News.

MAMMOTH, Oct. 5th, 1896.—Many mining men will no doubt regret to learn that Mr. Nick Taylore has resigned his position as superintendent of the Bullion Consolidated and Union mines. Mr. Taylore has been connected with these mines for over a year and there are many of the old time miners who will miss him at the properties. The gentleman left here today for Ruby City, Idaho, where he will take the supervision many of other mining properties.

The Dyer Mining company incorporated its articles of incorporation today from the secretary of state. The company has the reported of 500,000 shares of the par value of $5 each. This company has a very promising outlook for the future. The shaft is now down 125 feet and the ledge is getting wider, as depth is attained.

Mr. Pat Donohue, the superintendent of the Monmouth mills, has just returned from a business trip to Montana. He is looking well and hearty.

Mr. Perkins and Mr. Morgantaler have just returned from a trip to the north Tintic. Both gentlemen have been considerable prospecting at the new gold camp and have struck some good looking ore which will pay very high. Mr. Perkins and Mr. Morgantaler are making many better on their trip. With reference to the Goldfield fields when the former is well satisfied with the good showing on at the mine. The last 6 feet down has been in ore, at present are making enough ore to line three cars, which is sufficient as good indications for the immediate future. There are three miners working in the Goldfield fields, and the entire ranges for the property is found very reliable.

Messrs. Gibney and Yates have just started a new ore road on the Centennial-Eureka. As the grades of road thus avoids the heavy grades on the Centennial-Eureka, it will no doubt save a considerable haul.

The Ajax, Mammoth and Black Crescent coal companies are very busy getting out coal for the winter trade at this camp. The former is still making heavy consignments to the Bullion Consolidated mines and returns are quite satisfactory.

THE STOCK EXCHANGE.

The Market Firm With One the Only Selling Stock.

One was the only selling stock on Exchange today, 1,000 shares changing hands at three-fourths of a cent per share, and 100 going at half a cent. Taken as a whole, however, the market was firm and gave indications of gradual improvement. The Bullion-Beck stock was steadily held and at $3.95, the last sale, and bonds at $6.25. Mercur sold similar figures in the trading while the bid for the stock was $5.85. The Sevenoaks jumped to several points and at the close $1.05 was asked for the 8 sold Swansea stock while the Swansea paper was not offering.

A BIG MINING DEAL.

Sale of an Oregon Gold Property Mine Unknown Once Worked.

R. C. H. Hall, secretary of the Golden Chariot, Rose City, Lewis and Clark mining claims, has just returned from the Green Horn district, located near the Green Horn river, by Francis Lyman, and extensively mined until 1884, when, for some reason, work was suspended. The property was bonded by E. A. Greene, whose trust Mr. Hall represented, to which to make examination of the property. The property examiner is owned by Messrs. Tom Rice, Charles O'Connell and James G. McFarlane, of Rawlins, and consisted of 8,000 acres. Mr. Greene made a very thorough and complete examination of the ground, as well as the water question, also putting some $4,000 for labor performed in surveys and prospect work during the past three weeks. The examination was satisfactory to Mr. Greene and the property will be transferred to him as soon as the necessary papers can be made out. A pipe line 22 miles in length will be put in as soon as possible, and will have a capacity of 3,000 miner's inches. This is the greatest drawback ever made to mining property in the state. The consideration is supposed to be about $80,000.

Mr. Hall says that in the past fifty years but there were very rich placers in the Green Butte district, but the inability to obtain water has prevented their being worked on any great extent. The first mining was done in Oregon gulch in 1848 and the old miners and cabin are still to be seen. In 1859 a second attempt was made to work the property and over 100 miners from Idaho and Utah came in there and began work. A dispute over mining was sung by those early miners with such a riot and storm, but to-day it is one of the best law cases on record, where at present are making enough coin to line three sides, which is sufficient as good indications for immediate future. There are three shipping miners working in the Goldfield fields, and the entire ranges for the property is found very reliable.

Messrs. Gibney and Yates have just started a new ore road on the Centennial-Eureka. As the grades of road thus avoids the heavy grades on the Centennial-Eureka, it will no doubt save a considerable haul.

THE DOUGLAS MINE.

Good Ore in a Property Located Near Three Mile Creek.

A short time ago an assay was made in ore from the Hoosley mine near Three Mile Creek, says the Brigham Bugle. It went $5.40 gold and $2.50 silver. For some time Messrs. Culver Bros. and Frank Hooley of Three Mile have been doing considerable prospecting on the hills to the southeast of Brigham. They have found seven good claims. Darlin three months from to-day they will have a wagon road to the mine. Various claims, but so far the Hooley is proving the best. It is up in Three Mile Creek canyon about a mile and a half. The tunnel is being run in the side of the hill this was recently opened out by the present old Hoosley. E. D. Cowley has charge of the Hooley.

The owners have samples of ore taken from the mine. They show galena in free and copper, traces of gold and silver. The ore is quite free milling. The miners are quite encouraged over the prospects.

The Ajax, Mammoth and Black Crescent coal companies are very busy getting out coal for the winter trade at this camp. The former is still making heavy consignments to the Bullion Consolidated mines and returns are quite satisfactory.

Dips and Spurs.

Superintendent Frank Austin of the Lower Mammoth is in town.

The recent strike of ore in the Lucky Hit at Park City is reported as improving as depth is obtained.

Last week's ore consignments from the Mammoth mines aggregated 1,532,320 pounds, or a little over 766 tons.

A new strike of ore on the 600 level of the Ontario is reported as running exceptionally high in native silver.

The Creole at Park City is at present showing ore that carries values of 6 or 7 ounces silver, 12 per cent iron, 6 ounces silver and $6 in gold to the ton.

The Vallejo company's first shipment of ore from Park City yielded returns of $60 per ton. It contained 15 per cent lead, 12 per cent iron, 14 ounces silver and 18 per cent. iron.

Reports from the Bullion Park mine

A New End of Argument in Utah

Two exhibits of utensils are found in Salt—straight, the beautiful crystals in snow-white, dark, and colorless, and still more showy jackets—unmistakable, Ascot. Both of these exhibits have been known from the earliest times, the first admirable article of trade being in the Grotto "Diamond" setting by Theophrastus, about B. C. 315. The present basket, "Saltcellarium," is a corruption of the Latin name, "Sautchiamonum," first given to the material by Pliny about A. D. 78. Amyl, meaning means "golden salt," are the second words named for salt, but one of its earliest golden, white and sweet, but six. Because I. was supposed to contain iron.
