Prices in a Few Cases Show Some Improvement.

GRAND CENTRAL STRONGER

May Day Advances - Chloride Point Puts On a Spurt-Hammoth Much Weaker.

## TODAY'S METALS: SILVER 5914

······

LEAD, \$4.57 % CASTING COPPER 15

The amount of business transacted oday on the exchange was not large, but some stocks show a slight stiffening in price. May Day made a noticeable advance to \$2, while Sacramento was in slightly better form at 30%. Grand Central closed stronger, as did Chloride Point, which started out at

151/2 and closed at 161/4. Star Consolidated also sold a little higher, bringing 28, while Martha Washington participated at 54.

A very noticeable decrease is found ta Mammoth which fell to 2.29. For some reason the ore shipmen s are very light just now from this producer. Joe Bowers Extension continues to

move with crablike motion. It sold today at 5. Four Aces was transferred at 61/2. while Daisy closed its last sale at 13%.

This gives a width

The management is jubilant

distance of 260 feet, where the work is now going on. The ore is hoisted out of the shaft by a horse whim. At present ore is being hoisted from the lower level of the incline shaft, while drifting and respecting is being presecuted in other lirections. About twenty tons of mil ing ore is being taken out daily. output would be materially increased were it not for the scarcity of water, which confines the management to one shift a day of fourteen men. As this force will be doubled as soon as the water supply will permit, the output will, accordinglyl, be increased propor-

tionately las the workmen are in a strong veln of milling ore. In the crosscut being driven into the footwall a new character of ore has been encountered that shows more a carbonate nature than that which the leasers have been treating. It has a very encouraging look and we hope it will turn out to be of a high grade shipping character. It will not take many days to determine whether or not this is the case. Work has heretofore been done on the hanging wall, the ore being taken out of the vein supposed to be between the hanging and th wall, but in crosscutting to the foot-wall it was found to be all ore, and it was here that the change in the character of ore was found. This vein varles in width from three to eight feet. and the ore strongly resembles the

Anchor product, The ore is taken through the tunnel to the mill at the mouth, and after going through the rock crusher is automatically into the Huntington, and from there to the two Wilfley tables. No jigs are employed. In the mill is ocated the Root blower, which furnishes air to the miners.

Mr. Rookledge is having an assay made of the new rock just uncovered and we hope to give the result in a short time. The property is certainly looking up, and the operators have the best wishes of all.

### Mercar Items.

In its review of the week the Mercur assays recording as high as 70 per cent lead with 15 to 25 ounces silver and \$3 Mercury says: The late development in the Little Pittsburg is proving to be of great importance. For the last fifty in gold per ton. The samples seen feet the entire drift has been in ore lay closely resemble ore from the ver King in the Deep Creek country. of milling value, and the face is now in ore more promising in appearance than om the new district will be looked forany heretofore encountered. As the drift is in ore-top, bottom and sides -it will take both sinking and upraising to demonstrate the size of the ore There will be a great awakening in that neck of the woods one of these bright mornings. The annual meeting of the Silver King

Superintendent Isaac Jones was over from the Northern Light during the week and reports everything moving along satisfactorily at that property. The regular force continues at and the usual amount of ore is being taken out. Exploration and development continue with encouraging results.

A car shipment for the smelters is being loaded and will go forward today. which will probably net the company about the same value per ton as former recent shipments. Encouraging reports are received at

this office from the Northern Light Ex-tension on Lion Hill. The tunnel, being run to cut the ore body heretofore developed in adjoining ground, and which was reasonably expected to pass through this property is now in eighty-five feet, with a foot of good shipping ore in the face. Recent assays from this vein have shown average values of about 175 ounces silver and \$2.50 gold. There seems to be no doubt but that the present discovery will open up into a large ore body-at least this has been the history of the ground in that locality.

## UTAH CONSOLIDATED.

Smelter Profits Show Something Like a Net Income of \$50,000 a Month.

According to the Boston Journal the directors of the Utah Consolidated Mining company, which owes the Highland Boy mine at Bingham and the smelter near Murray, have issued a brief report to the stockholders as fol-When the present management

sumed control, in April last, there had been developed by means of tunnels Nos. 4, 5 and 6 three distinct bodies of sulphide copper ore, estimated to contain 550,000 tons.

Since that time in addition to systematic cross-cutting of the existing ore bodies, work has been vigorously pushed on tunnel No. 7 (which is 100 feet below tunnel No. 6), with the object of ict was yesterday consigned to the determining the existence and extent of these three ore bodies on that level. e of a trial shipment although the s at the back of it express ev-

In September last ore body No. 1 was struck in tunnel No. 7, and cross-cutting is now being carried on to determine its area and the tunnel is also being carried forward to determine the existence of ore bodies Nos. 2 and 3.

From developments made since April last it is safe to estimate at present upon the existence in the mine of 900,000 tons of sulphide copper ore. Shipments about 15 inches wide. Assays recorded as high as 30 per cent 10 ounces silver. These are the upon the existence in the mine of 900,000 tons of sulphide copper ore. Shipments of ore have been made from the mine to the smelter since last May.

The existing buildings and equipment at the mine are inadequate, so plans at the mine are inadequate, so plan have been made for a new power house

office, upper tramway terminal, coat pockets, freight elevator, warehouses and shops, which, with the necessary machinery equipment, will cost about 60,000. When these improvements are carried out, the company will be in a position to mine and handle its ore more economically than at present, The smelter was put in commission in

the last of May, and durign the first two months of its operation the usual trouble in starting a new plant was ex. perienced. It was found that the ca-pacity of the three calcining furnaces was considerably in excess of the three reverberatories, so a fourth reverbatory furnace is now being built.

Complete plans have been prepared for doubling the present smelter capacity. This will only necessitate the building of three or four more reverberatory furnaces with the necessary calcining apparatus and the addition of two converter stands, as the smelter as it is now built, is provided with a power plant of sufficient capacity to take care of double the tonnage newbuildings will have to be erected, but simply extensions of those which are at present existing. The total cost of this enlargement of the plant will be approximately, \$150,000.

Our emelting plant is the most modern in existence in the United States The mechanical handling of today. the ore and products has been carried out to perfection; and on account of this high excellence of the design, the expenditures for labor, fuel and supplies are reduced to a minimum. The following summary of results to

stated above, the smelter did not ge into regular running order until July 1 From the time of its blowing in until Nov. 30, the total production of fine copper was 3,016,075 pounds.

Gross receipts from sales of copper, silver and gold, \$589.845; expense at mine and smelter, including all expenses of handling copper, such as freight missions and expense account, \$284,245; net income, \$305,600.

MINING NOTES.

W. B. Andrew has returned from Denver. The Sunbeam of Tintic had a car of ore on the market today. The Swansea of Tintle took down the

price of two cars of ore today. The Conklin sampler receipts today were three cars of ore from Tintic. The annual meeting of the Tesora

Mining company was to be held this af-

A three car lot of ore from the lessees on the Niagara property at Bingham were on the market today.

The Martha Washington Mining company's annual meeting was scheduled to take place this afternoon. The Sacramento reported at the refin-

ery today with a 500 pound shipment of gold cyanides. The Taylor-Brunton sampler reported ten cars of ore from Bingham today. The Dalton & Lark marketed seven cars of ore today.

A contract has been let for an up-raise of 150 feet on the Louise S. com-pany's property at Bingham to connect the lower tunnel with a shaft on the hillside above. F. E. Wilson went to Alta today to ook over the Alfred Reed property, o

which work was resumed a short time ago, and which has yielded some high grade silver ore. The uncovering of ore is reported from the lower drift in the Gipsy Blair at Alla. A winze was run from the tunnel level and the present strike is reported in a drift from the winze.

The governing board of the stock exchange have reduced the monthly mem-bership fee from \$3.00 to \$1.00 for the list quarter of the year. Thus instead of paying \$9 a quarter members will only pay \$3.

Word was received in the city today of the death of W. H. C. Onderdonk in Fordham, New York. Mr. Onderdonk, it will be remembered, was at one time general superintendent of Dickert and Myers Sulphur company, which operated in southern Utah a few years ago.

Quite a siir was being made this af-ternoon over the reported loss of a can of cyanide product shipped to James Moffst of the Star Gold Mining com-pany of Bingham. Two cans were shipped and only one it is said reached its destination.

At the annual meeting of the Ray-mond Mining company, held yesterday afternoon, Thomas Kearns, George W. E. Dorsey, John C. Sullivan, John C. Lynch and Josiah Barnett were elected directors for the ensuing year. The shaft is down nearly 400 feet.

J. C. Thompson has returned from a trip to Seattle, where he says the recently started mining exchange is doing a good business. Great numbers are preparing for the rush to Cape Nome in the epring, and among them is De Witt Lowe of Salt Lake stock exchange fame. A few men are working in the drift off the 450 level of the Joe Bowers, Ow-

ing to the appearance upon the scene of a few minor heirs in the Burham estate, it is stated that it will be about two months before the details of the settlement are all arranged and the matter disposed of. The statement which appeared in these columns yesterday that lead had

advanced to 4.59% was due to the assurance of an individual in the smelter company's office early in the day that such was the case. It was learned too late to change the matter that the settling price this week will continue the same as last week.
