

# BUY GOLDFIELD BLIZZARD SHARES QUICK!

## First Allotment of Stock at 10 cts. Per Share

IS FAST BEING ABSORBED.

\$ 50.00	Bought 50,000 Shares of GOLDFIELD MINING CO. in November, 1903. It is now worth . . . . .	\$30,000.00
\$100.00	Bought 10,000 shares of FLORENCE MINING CO. of Goldfield, in November, 1903. It is now worth . . . . .	\$32,500.00
\$175.00	Bought \$1,000 Shares COMBINATION MINES CO. of Goldfield in November, 1903. It is now worth . . . . .	\$10,000.00
\$ 50.00	Will buy 500 shares of GOLDFIELD BLIZZARD MINING CO. today. Two years hence it will be worth . . .	? ? ?

You must act quickly if you want to "get in" on the first allotment of treasury stock of the Blizzard Mining Company of Goldfield at 10 cents per share. It is fast being absorbed.

The Blizzard Mining Company of Goldfield owns in fee simple a group of nine mining claims on the great east-west mineral zone of the Goldfield district, and is beyond question one of the best gold mine prospects in the whole district.

Half a dozen big quartz ledges crop on the surface. They are from 20 to 60 feet wide and from 1000 to 3000 feet long. An assay of \$34 per ton in gold was obtained on the surface last month. On this spot the sinking of a shaft has just been begun. It is a monster prospect. Mining Engineers stamp it as having better surface indications than had the Jumbo or January of Goldfield, which have produced \$3,000,000 in bullion the past two years.

Development work has already commenced, and a producing mine will be made of it in the quickest possible order.

The holdings of the company are described in the report of Mining Engineer J. F. Mitchell, which is reproduced below.

J. F. Mitchell was formerly one of the leading mine operators of Colorado. At different times he was general manager of the Ute and Ulay mines at Lake City, Colorado, general superintendent of the Yankee Girl at Red Mountain, Colorado, and of the Enterprise at Rico; afterwards general superintendent of the famous January mine at Goldfield; consulting engineer of the great Jumbo, and is at present general manager of the Portland mine in this district.

## MINING ENGINEER'S REPORT.

Goldfield, Nev. Sept. 15, 1905.

To the President and Board of Directors, The Blizzard Mining Company, Goldfield, Nevada:

Gentlemen:—At your request I have examined the Blizzard group of mines, situated four and one-half miles east of the town of Goldfield, in Nye County, Nevada, and beg to submit herewith the following report:

**NUMBER OF CLAIMS.**—The Blizzard group consists of seven full and two fractional claims, or, in the aggregate, 150 acres of ground. These are by name: Blizzard No. 3, Eagle Nest, Butcher Bird, Sunny Slope, Sparrow, Hornet, West, Swift Fraction, Belview Fraction.

**LOCATION OF PROPERTY.**—This group of claims is located in the eastern section of the great mineral zone of Goldfield in the Goldfield mining district, Nye County, Nevada. This section of the zone, which first shows prominently in the Red Top mine at the western base of Columbia Mountain, is at present a center of very considerable activity. On the zone are situated all of the most prominent mines of the camp. During the past eighteen months this belt of mineral has yielded over \$6,000,000, although the deepest workings are only 329 feet below the surface. In all history of mining such a record has not before been equaled.

**SURFACE SHOWINGS.**—In no place along this mineral zone can more distinctively flattering showings be found than on the Blizzard group. No less than five prominent quartz fissures stand out boldly above the surface, indicating the line of vein formation that characterizes all portions of the "Golden Horseshoe," as the belt is frequently termed. These outcroppings all show pronounced mineralization, carrying manganese or iron, one of the truest and most positive indications of value and permanency.

In my examination of these surface showings I took samples from every outcropping. All of them gave assay returns in gold, proving conclusively that they are all enriched by the precious metal. Very few, if any, of the great mines of the district presented such pronounced indications of the occurrence of bodies of high grade ore beneath the surface at relatively the same period of development, nor did I obtain such flattering assay returns from the Jumbo, January or numerous other properties that are now great mines, from surface ores. In view of these facts, I consider the Blizzard the equal of any property in the district in prospective worth.

**TITLE.**—Full and clear title to the property is vested in the Blizzard Mining Company.

**CONFLICTS.**—I am unable to find, from maps and my own personal investigation, any possibilities of conflict. All veins showing on the claims apex in their own territory, thus assuring the company all extra-lateral rights that may accrue to the ledges. Surveys have been made by competent engineers, and posts have been set at all corners, sides and centers.

**FORMATION.**—The surface formation is porphyry, and is identically the same as that surrounding all of the best mines of the district. There are, in addition to the five quartz fissures that crop out so boldly, decided indications that several more may be disclosed with some intelligent prospecting. The width of these dikes varies from twenty to sixty feet. The veins are mostly pure silica or are heavily silicified. Heavy ochre stains are found in many places, and on all sides may be seen the most positive indications known to mining of heavy and permanent enrichment in gold. From every viewpoint the Blizzard will compare most favorably with any undeveloped acreage in the camp.

**ASSESSMENT WORK.**—Assessment work has been completed on every claim in the group, in strict conformity to every requirement of the Federal mining laws and the mining laws of Nevada and the local laws and customs of the district.

**DISTANCE FROM WELL KNOWN PROPERTIES.**—The Blizzard group of mines is situated in direct line with the formation of the main vein systems of the district. This vein system is indicated at surface by a series of parallel dikes or fissure croppings that have a north-east and south-west course. On the Blizzard, these dikes show boldly above the surface and are distinct in outline. The vein system referred to is boldly marked along its course, passing from the Red Top through the Jumbo, Combination, Florence, January and February, Vernal, Lone Star, Simmeron C. O. D., Gold Bar, Dixie—all mines of the first importance—and the Blizzard, Windsor, Davenport, into the main backbone of the Goldfield uplift represented by Knickerbocker and Black Cap mountains, finally disappearing, so far as surface showings indicate, in the desert to the eastward, ten miles away. The Blizzard is less than half a mile away from the Dixie, which has been developed into a great mine, with workings down to a depth of 329 feet. Tremendous bodies of medium grade ore have been blocked out in the mine and await extraction. They will not be disturbed until the mine is equipped with a milling plant. The Dixie is the only mine in the eastern belt that has been systematically developed and the fact that it shows such immense bodies of good ore may be taken as a guarantee that properties farther east will develop into equally as important mines with intelligent work. The surface showings on the Blizzard far excel those found in that locality, indicating richer ore bodies than those of the Dixie.

**ASSAYS.**—The following assay returns I obtained from samples taken at random from different ledges on the property without any previous knowledge of values shown: No. 1, \$2 gold; No. 2, \$31.60 gold; No. 3, \$1.10 gold; No. 4, \$28.30 gold.

**REMARKS.**—In its every feature the Blizzard is an exceptionally attractive mining proposition. Its ledges and outcrops are as fine looking as any in this camp; the property is in every respect accessible, and presents no difficult features of mining; a good road, open the year round, connects the group with the town of Goldfield; it is not a difficult matter to build a road to almost any spot on the property. I consider the Blizzard group in every sense worthy of thorough development, and firmly believe that an aggressive campaign of work will undoubtedly place it in the list of producers of high grade ore of the district.

J. F. MITCHELL,  
Consulting and Mining Engineer.

## A Directorate of Mining Men.

Richard Willis, the mine owner and mine investment expert of Colorado Springs, is president of the Blizzard Mining Company. For more than ten years Mr. Willis has been closely identified with the development of the mines of Cripple Creek, Colorado. He is widely known in mining circles of the West as an authority on mining investments.

The vice-president and general manager, H. W. Knickerbocker, has made a fortune in mining in Nevada. His connection with the Blizzard Mining Company is of far more than transitory importance, in view of the fact that he is so thoroughly familiar with the occurrence of ore bodies in the eastern belt of Goldfield. Mr. Knickerbocker will never be satisfied until the Blizzard takes rank with the Combination, Jumbo, Florence, and the other great shippers of this district.

Associated with Messrs. Willis and Knickerbocker in the directorate of the company are J. Frank Smith, a noted engineer of Hinton, West Virginia, and George D. Pyne of Goldfield, an authority on mining law and one of the leading practitioners of the State.

John S. Cook & Co., bankers, Goldfield, are acting as depository for the company.

The company is capitalized for 1,500,000 shares; par value \$1.00; fully paid and non-assessable. Five hundred thousand shares are in the company's treasury. From the sale of the treasury stock the company's holdings will be thoroughly, systematically and aggressively developed. The price at which this stock is offered to the investing public has been fixed at 10 cents per share. This is approximately the price at which all the successful promotions of Tonopah and Goldfield were first offered to the public. It is moderate, fair, ungrasping. The money netted to the treasury from the sale of treasury stock will be used to develop the property and make of it a producer in the quickest possible order. Shafts will be sunk; tunnels will be driven; hoisting machinery will be installed. In fine, a dividend payer will be made in the shortest possible period. The chances for gain are tremendous to all investors.

Prospectus and illustrated history of Goldfield mines and mining investments on application to the fiscal agents, to whom all orders for stock and remittances to cover should be sent at once. Wire your reservation of shares and follow your telegram with remittance to cover.
