CHLORIDE POINT MILL.

Working Like a Charm With a Recovery of 70 Per Cent Silver Values.

MINGUS CREATES A STIR IN THE PIT.

Tests Have Again Proved To Work the Ore Free—Highland's Chloride Mill—Mines of Southern Utah.

[illegible] who are several weeks past the best showing the Chloride Point mill is now under its first Lixiviation vats. They are now in the midst of the second charge and the process is finishing the case of that charge. So far, work has been by a series of experiments, and while the results, since the mill started in the latter part of August, 1897, have on the whole appeared very favorable, the management has been desirous of making a still more thorough test before declaring the mill a success. Accordingly the mill has been closed down for the past week, and will not again start up until Monday next.

The mill has run quite steadily, treating 125 to 130 tons daily, but there is still enough ore on the dump to keep the mill employed, perhaps longer. Superintendent Hinton, in charge of the new concentrating mill is anxious to close down the present mill in order that the number of employees may be reduced to a minimum while the new mill is in full running order. During the past few days, while the mill has been closed down, the men at the mill have generally availed themselves of the opportunity to get much better than he had anticipated. Some of the tailings show from 3 per cent lead, and on average, assaying $7.50 to the ton, and it is believed that the ore will have to run assaying $7.50 to the ton, and it is believed that the ore will have to run assaying $7.50 to the ton, and it is believed that the ore will have to run
