

OUR OWL STATE.

The branch office of the Deseret News in Ogden is at No. 466 Twenty-fourth street, where advertisements and subscription orders will be received. The "News" is delivered by carriers in Ogden every morning on the same terms as in Salt Lake City.

OGDEN NEWS.

OGDEN, UTAH, APRIL 11, 1901.

DESIGN NEW WATERWORKS

Matter Discussed at a Special Meeting of Council in Executive Session.

Alex. Russell Meets Painful Accident—Court Notes—Appearance of Salt Lake Opera Company.

Alexander Russell, who, for several years past, has been deliveryman for the Richardson's grocery store, met with a painful accident yesterday, which will disable him for several weeks. He was preparing to take out a load of groceries and in jumping out of the wagon his toe caught on the side of the wagon bed throwing him violently on the pavement in front of the store. He struck on his hands and knees, breaking his left knee cap and otherwise giving him a severe shaking up. Dr. Fordham was summoned and Dr. Russell was taken to his home, where the broken bone was set and he was relieved of his sufferings as much as possible.

IN POLICE COURT.

Hearing in the case of Ed. Williams, charged by Ed. Rudiger with keeping a vicious dog, was had before Judge H. H. Hamlin. The testimony of the plaintiff failed to show that a dog supposed to belong to the defendant had attacked Rudiger's children several times. Mr. Williams for the defense said the dog did not belong to him, but that he loved him home, that he did not know it was vicious.

IN THE DISTRICT COURT.

In the matter of the estate of Benj. Crader, deceased, a petition was filed by the administrator for approval of final account and distribution. There is left of the estate \$381.26 in cash and a piece of land to be divided among the heirs.

WATERWORKS CONTROVERSY.

The waterworks controversy having terminated, temporarily at least, payments are now coming in and paying their water rates. The city council last night had a special meeting to consider the situation and transacted all its business in executive session. It is known, however, that Councilman Jones introduced a resolution calling on the city engineer for an estimate for a new waterworks system of the extent covered by the present system and capable of sustaining 170 pounds of pressure, the estimate to cover the entire cost of everything in the way of material and labor. The estimate, it is said, was two hundred and fifty thousand dollars. The council, it is said, is still hoping that some method may be found to compel the sale of the present system, in accordance with the terms of the original franchise.

SALT LAKE OPERA CO.

The Salt Lake Opera company will appear at the Grand opera house Friday evening, when they will present that striking and most pleasing opera, "Fatinista." The company has been strengthened by several of the State's best singers, since its last appearance in Ogden, and their production Friday night promises to be very fine.

BUYING OIL FIELDS.

A representative of some Los Angeles oil companies is in Ogden for the purpose of buying an option on the Wyoming oil fields, which are owned principally by Ogden men. The fields have been causing considerable excitement in the city.

BRIEFS AND PERSONALS.

The fifth ward Sunday school will give a concert of their enjoyable songs next Monday evening in the ward hall for the benefit of the kindergarten department. Ford's orchestra will furnish the music and a good time is assured for all attend.

TO MOTHERS OF LARGE FAMILIES.

In this worldaday world few women are so placed that physical exertion is not constantly demanded of them in their daily life.

Mrs. Pinkham makes a special appeal to mothers of large families whose work is never done, and many of whom suffer, and suffer for lack of intelligent aid.

To women, young or old, rich or poor, Mrs. Pinkham, of Lynn, Mass., extends her invitation of free advice. Oh, women! do not let your lives be sacrificed when a word from Mrs. Pinkham, at the first approach of

Special Correspondence.

Provo, Utah Co. April 11.—William Standford, 25, and Eva L. Nelson, 21, both of Goshen, have received a marriage license.

April 27th has been set for hearing the petition of William M. Clyde for removal of administration in the estate of Eliza Clyde, deceased.

Miss Maud May Babcock will give a Shakespearean recital before the Parents' class in college hall, Saturday evening.

W. R. Looe has been notified that a patent will be issued to him for his revolving muffle furnace for the reduction of ores.

Sheriff Storing went to Eureka last night to bring on three men, Peter Ay-Bison, Arthur Rowley and Peter Gillespie, charged with stealing junk from the Godiva Mining company.

GILES.

Early Fruit Injured—Putting in Substantial Dam in River.

Special Correspondence.

Giles, Wayne Co., April 8.—Cold and windy weather has been the order of the weather in this country for the last two weeks, the apricot blossoms have been frozen, while peaches and apples are not far enough along for the frost to do any great damage.

A little boy and girl have come to the homes of Bishop L. C. White and S. E. Parker. All concerned are doing well.

The little girl of three years has been very busy for the last three days putting in a good substantial dam which is not likely to soon go out as large rocks were blasted into the river that will weigh tons. Everybody has been busy for the last week watering their lucern.

AST-UNDED THE EDITOR.

Editor S. A. Brown, of Bennettville, S. C., was once immensely surprised. "Through long suffering from dyspepsia," he writes, "my wife was greatly run down. She had no strength or vigor and suffered great distress from her stomach, but she tried Electric after after using four bottles and she is entirely well, can eat anything. It's a grand tonic, and its gentle laxative qualities are splendid for torpid liver." For indigestion, Loss of Appetite, Stomach troubles, it's a positive, guaranteed cure. Only 50c at Z. C. M. I. Drug Dept.

LEHI.

MIGRATING TO CANADA.

Special Trainload Left Yesterday—Municipal Affairs.

Special Correspondence.

Lehi, Utah Co., April 10.—Lehi is experiencing today an event that would almost remind a person of the migration of the early days when the Saints left their old homes and came to this country.

Mrs. Carrie Belleville.

weakness, may fill your future years with healthy joy.

"When I began to take Lydia E. Pinkham's Vegetable Compound I was not able to do my housework. I suffered terribly at time of menstruation. Several doctors told me they could do nothing for me. Thanks to Mrs. Pinkham's advice and medicine I am now well, and can do the work for eight in the family."

"I would recommend Lydia E. Pinkham's Vegetable Compound to all mothers with large families."—Mrs. Carrie Belleville, Ludington, Mich.

SCIENTIFIC MISCELLANY.

Rattlesnake poison is the singular remedy for leprosy brought forward by Dr. M. de Moura, of Brazil. A native of Brazil, he has been cured of leprosy by the use of rattlesnake poison, and he has carefully pressed the poison glands and administered it to fifteen leprosy patients—to some internally and to others in the form of a subcutaneous spray. The results have been so favorable that he is convinced the perfected treatment will become a genuine cure. A distinguished German pharmacist, while admitting that this conclusion may be justified, points out that the snake poison in quantity kills leprosy as easily as other persons.

A useful imitation celluloid is produced, according to a German method, by dissolving in 16 parts by weight of glacial acid 15 parts of nitrocellulose, and adding 5 parts of gelatine. Gentle heating and stirring are necessary. After the mass has swelled, it is mixed with 7.5 parts of 96 per cent alcohol, with continued stirring. The slurry produced is poured into molds or after further dilution may be spread in thin layers on glass. As an underlay for sensitive photographic films, the material has important advantages, not the least being that it remains flat in developing.

It is often inconvenient to use a camera in libraries. A new method of obtaining reproductions of books consists in placing a piece of cardboard covered with lichen in the book, and engraving or writing to be copied and laying a photographic plate on the face for 15 to 30 minutes. The plate is transferred to the book and back to a dark box under a suitable cloth.

A book on the ears as an index of character having been published by Dr. A. Keith, mentions his own elaborate study of the ears of more than forty thousand people, including 500 criminals and 2,000 insane persons, besides those of 300 aces. He was forced to conclude that the ears gave no clue to personal traits.

The great problem before the engineer, states Prof. J. A. Ewin, is the efficient utilization of heat energy. The steam-engine of today is more efficient than that of Watt's time, but much remains to be done. One possibility is the use of steam at higher pressures, and in engines, and a system of this "superheated" steam is now being introduced from Germany, by which 1 1/2 pounds of coal can be made to yield 1 horse-power one hour, against about 2 pounds required by the best ordinary engine. From steam engines, a 1 1/2 horse-power per hour may be obtained for 1 pound of coal. The modern turbine engine, as developed by the Hon. Charles Parsons, is remarkable for its efficiency. In its latest form, it gives a greater return for a given quantity of steam than any other engine.

The belief that buildings over the craters of slumbering volcanoes must be in a state of constant tremor unknown in the more stable regions is disproven by A. Riccio and L. Franco. Tromometric observations have been made at the observatory near the summit of Mount Etna at a height of nearly 10,000 feet, and at that of Catania, at the foot of the mountain, readings having been taken six times a day for nearly eight years. The crater station proved to be more quiet. The tromometric was in motion in 62 per cent of the observations at Catania, but in only 46 per cent on Etna. During a rough sea the trembling is never absent at Catania, while a strong wind has more effect than on the mountain.

A noiseless alarm clock would prove a seasonal find. The suggestion is made that a silent alarm can be given by a boom to a host of sufferers from unfocusing an electric lamp upon the head of the person to be awakened, and arranging a switch so that the current to light the lamp would be turned on by the clock at the desired time. It is claimed that the flash of light would invariably arouse the sleeper.

The mystery of poisoning from arsenical wall papers has been solved by the discovery of an organism that feeds on arsenic. This is a mold, Penicillium brevicatatum, and under its influence paper emits a gas, diethyl arsine, to which the poisonous effects upon persons living in the room are found to be due.

In the half-prevention experiments in France and Italy, the acetylene cannon seems to have given the greatest promise as a safe and economical apparatus for bombarding the clouds. It is acetylene in the air, and is set off by a strong upright air, with a narrow funnel extending upwards. The gaseous mixture is fired by an electric lighter near the bottom of the cylinder. The force of the explosion reaches a great height and experienced vine-growers are convinced of its effectiveness in preventing the

formation of hail in threatening clouds. As the gas is produced only when needed, a charge of the generator with calcium carbide—giving more than 1,000 explosions—is sufficient for six months or more. A battery of 50 or more somewhat scattered cannons being connected electrically, one operator, on seeing dangerous clouds, hastens to the central station, and in a few seconds causes a supply of gas and cause an explosion in every cannon.

The replacing of lost parts by new growths is a power of some animals that was given much interest by experiments of naturalists in the eighteenth century. Among the striking ones named by Prof. J. Arthur Thomson finds that an earthworm may regrow a head or tail, or a tail in place of a head; a starfish arm with a fragment of disc may become a whole animal; a crustacean may regenerate a lost limb and sometimes an antenna.

What is known as Lesson's law teaches that regenerative capacity tends to occur in these animals and in those parts of animals which, in nature, at conditions, are most liable to injury.

The novel idea of a German pharmacist is to impregnate red liver oil, castor oil and olive oil with liquid carbide and under pressure. The effervescent gas up when the oil is poured out to be taken freely to the medicine a pleasant taste, and a further effect the carbide acid is to keep the oils from spoiling.

They Struck It Rich.

It was a grand thing for this country that such an enterprising firm as the Z. C. M. I. Drug Dept. secured the Agency for Dr. King's New Discovery for Consumption, the wonderful remedy that has startled the world by its marvelous cures. The furor of enthusiasm over it has boomed their business, as the demand for it increases. They give free trial bottles to sufferers, and positively guarantee it to cure Coughs, Colds, Bronchitis, Asthma, Croup and all Throat and Lung Troubles. A trial proves its merit. Price, 50c and \$1.00.

NEW CATALOGUE OF CHURCH WORKS.

Just issued by the Deseret News. Send for a free copy. Special terms to dealers, agents and canvassers.

Most women with female weakness suffer dreadfully from piles in addition to their other pains. They may be cured by using TABLET'S DUCKEY PILE OINTMENT. Price, 60 cents in bottles, tubes, 75 cents, at Z. C. M. I. Drug Dept.
