4TH JULY EXCURSIONS

RIO GRANDE WESTERN RY.

On July 3rd and 4th the Rio Grande Western Ry, announces a rate of one single fare for the round trip to any point on its lines. Tickets good until uly 8th. Take the Heber and Provo Canyon trip. Glorious outings in the canyons about Scofield, Maryesvale, etc. Fine fishing Cheap trips to Ogden, Park City, Parley's Canyon, etc.

Recoperative Effect.

Considered with reference to its recuperative effect, there is not so much good in the ordinary vacation as there is in a single bottle of Hood's Sarsapar-The latter costs \$1; the formerwell, that depends; how much did yours

Hood's Sorsaparilla refreshes the fired blood, sharpens the dulled appetite, restores the lost courage.

POPULAR SUNDAY EXCURSION

TO CASTILLA SPRINGS. On Sunday next, special train for Castilla leaves at 9:35 a, m., \$1.25 round trip. Hot Springs. Beautiful Spanish Fork canyon. Fishing in vicinity. .

If the stomach performs its functions actively and regularly, the food of which it is the receptacle, is trans-formed into blood of a nourishing quality, which furnishes vigor and warmth to the whole body. HER-BINE gives tone to the stomach and promotes digestion and assimilation. Price, 10 cents Z. C. M. 1.

TO WORK AN OLD PERUVIAN MINE.

Ajax and May Day Sold a Few . W. McCune is to Head the Gigantic Syndicate.

Estimated to be Worth 872,000,000-Mine Has Reen Worked for 271 Years.

A big syndicate is to be formed by the stock exchange were somewhat A. W. McCune for the purpose of pursluggish and there was little movement | chasing and operating an old Peruvian in stocks. Ajax found a hovering level sliver mine. Upon his arrival at New at \$1.50 and threw out a few thousand York, on his way to Peru, Mr. McCune shares at that average, while May Day | will form a company, with a capitaliwas left on the board at \$1.38, with no zation of \$10,000 to develop the old sold at prices ranging from \$1.36 to has been primitively worked for 271 \$1.43, at which figure the first sale was years, the method having been for made. From this point it was pounded peons to carry the ore up for hundreds zag steps in doing so; then the ore was packed to the coast and shipped to Liverpool.

Some wealthy people are to be associated with Mr. McCune, among them being James B. Haggin and the Hearst and Travis estates. The intended development of the mine is the result of a report of James Macfarlane, expert, upon the property. This report says there is a property. This report says their body of 1,000,000 tons of ore in sight, which shows values of twenty per cent which shows values of twenty per cent copper and thirteen ounces of silver to the ton, and a conservative estimate places the worth of the mine at \$72,-000,000. The mine is said to have already produced 700,000,000 ounces of

DALTON & LARK. Property Included in Bingham Consolidated Company.

In order to wind up the affairs of the Dalton & Lark company, preparatory to its inclusion in the property of the Binghom Consilidated, the directors have ordered the payment of a dividend of 10½ cents a share, which means the distribution to the stockholders of a total amount of \$256,725. In view of the one-time tangled condition of affairs of the Dalton & Lark, this outreflects special credit upon the efforts of Mr. Willard F. Snyder, who has directed the affairs of the mine since its acquisition by himself and Mr. P. L. Kimberley.

WATER-SOAKED STOCKS. How the Moistening Process May Prove Beneficial.

The fact is that the water in the stocks of industrial corporations is not only innocuous, but from one point of view is positively advantageous. The modern corporation is usually organ-ized on the basis of preferred stock, representing the fair money cost of the property, and of common stock, repre-senting the good will and possibility of profit which may be realized out of the business. The common stock, therefore, has cost no money, and it sells in the market at a price which has some re-lation either to the actual or possible profits after paying a fixed rate of divdend upon the preferred stock, which appresents actual investment of monrepresents actual investment of mon-ey. In this common stock, to my mind, lies the chief hope of the workingman of this country in the future. When times are prosperous it will undoubt-edly bring a high price. When times are adverse the stock will fall to a nominal value. It does, however, con-trol at both times the administration of rol at both times the administration of the business. My expectation is that when it is cheap the workmen will buy It up, and in the course of the coming century, I expect to see most of the large industrial corporations controlled by the workmen, who have thus se-cured the ownership of the common tack at a low price and under favor-able circumstances.—Abram S. Hewitt,

in Mines and Minerals. ADVOCATES A MINT.

A Coiner Living Here Guarantees Honest and Perfect Work.

A city correspondent of the "News" says that upon reading a recent news-paper article advocating the establish-ment here of a mint, he very much coincided with the views therein expressed, and goes on to say: "For one I can promise the United States government that if they will grant us the privilege for which we labored faith-fully in the early '70s, but which Carson City, Nevada, got instead, we will not be a particle behind the foremost government mint in the world in point of manufacture, both as to quality and quantity; and, if all goes by fair means, not by 'political pulls,' we will have honesty, combined with skill and perfection. We have at least one man here who understands the business just about as well as anyone need to. He was engaged in the greatest and quick-

est coining contract that was ever known before or since the time of recoinage of Sardinia's money, caused by the Garibaldi revolution in early 1860. Then the firm he was employed at lurned out 400 tons of perfect coin for the king of Sardinia in for v days. Think of it; ten tens a day, pronounced perfect in every way by Italian government experts. And so pleased was the king with it that he knighted the contractor. No mint in the world today can beast of any such wonderful feat.

A COINER." "Respectfully, GREEN RIVER OIL.

Prof. Louis W. Ely, an Expert, Re-

ports on the Fields. The "News" special correspondent at Provo writes that Professor Louis W. Ely has made a report on the oil lands in Emery and Carbon counties to Man-ager D. C. Robbins, of the California-Utah Oil company, which owns about 60,000 acres of land in the region between Green river and Soldier summit.

The following are excerpts from Professor Ely's report:

"I herewith hand you my report on
the Green river oil fields, located in
Grand and Emery counties. Utah; also
the anticlinal section lying between
Green river station and Soldier sum it
on the line of the Rio Grande Western

"The formation of this section of the county is a conglomerate formation.

occasionally thin sandstone layers becoming more prominent to-ward the top; country deeply corroded, conglomerate and sandstone in heavy beds coloring red. At a point on the Green river about four miles directly south [from Green river station] I find

the anticlinal formation crossing the river in a northwest and southeasterly direction with a trend of 45 degrees clearly defined, and formation is frequently saturated with petroleum for a onsiderable distance on either side of

"I have also made examination every ten or twelve miles apart as far north-west as Soldier Summit, and I find the same general condition of formation prevails along the entire length of this line. * * * The effect of the erosion has worn away the apex of the anticlinal and in spots it does not appear on the surface, but evidence of existence does appear at intervals, making it easy to trace. I also find in spots along the anticlinal hydro-earbon float, such as asphaltum and petroleum wax, which are undoubtedly the residues of an oil basin near at hand. I also find at the different springs of water the irridescent colorings of oil. "This section of country gives evidence of having produced immense quantities of oil." and even at the present time along the sides and base of these basins the shales are free-

Asphaltums are found in great quantitles scattered along the anticilinal sec-tion, which practically have per-colated through the different lines, and substances from the oil ba-sins below; and nearly all of the hydro-carbon compound have been evaporated by the action of the atmosphere, leaving nothing but the bare substance. My opinion is that when the asphaltums are found in great varieties there is the greatest evidence of the existence of oil.

ly saturated with oil, and an oily smell

One of the prominent features of this section is the old "Garn Well," which is located on the anticlinal section about five miles southeast from the Green.
River station. Water is discharged from this well, and also a small quantity of oil with the water; in fact oil can be skimmed from the surface, and oil and asphaltum are freely saturating the ground all around the well.

"I have made examination of the anticlinal section between Green River station and Soldier Summit, and find the anticlinal section nicely in place
and there is no doubt in my
mind but this anticline is the principal one in the state and only requires development to produce an excellent off field, and I consider any of the territory between the above named places on the anticlinal section to be as productive and as likely to make good wells as any

place in the state of Utah. "After making an exhaustive examination of this section and being thoroughly familiar with the Pennsylvania and West Virginia oil fields, I must say I am favorably impressed with the con-dition existing in the Green River fields, and believe it gives promise of as great future as any oil producing country and will compare favorably with any oil producing section."

Undoing of May Day.

That carioad of rich May Day ore which was expected to bring \$20,000, and the actual value of which was given in last night's "News," has done its work. The car netted to the company less than \$5,000, and immediately upon the publication of the figures, May Day stock went down as if weighted by a milistone. Then there is that \$10,000 dividend which is to be disbursed on Monday next, and which was posted under the benign and generous influ-ence of that \$20,000 wil'-o'-the-wisp that dragged its slow way between Tintic and the sampler until the "Lizzie boys" were "caught." As one fellow pathetically said, "They'll be dragging the river for these stock nibblers yet."

Con. Mercur Gold.

There has been placed to the credit of the Consolidated Mercur gold mines the sum of \$137,500 as the proceeds of the sale of gold bullion produced during the month of May. This amount will pay the regular dividend of 12½ cents a share and leave a substantial surplus. For the month of June the production promises to be much larger, with a fuure outlook deemed to be the most encouraging since the mines were opened

MINING NOTES.

George Moore left today for the Sunshine mine.

J. E. Bamberger has returned from a trip to Nevada.

Manager David Evans of the Uncle Sam Con. has returned from Tintic. Encouraging reports come from the Planetary group, recently leased by J.

M. R. Evans has returned from a trip to the property of the Golden King near

Park City. A consignment of 126 ounces of gold

has been sent from the Century mill at Park valley. Dr. Tucker reports the Bruckner fur-

nace plant fully restored and the full battery in use. James Moffatt reports considerable

activity in Pine Canyon, which he recently visited.

O. W. Schweitzer of the Bell-Mare Mining & Smelting company of Nevada is visiting Salt Lake for a few days. James A. Faust reports much activity among the miners of the Deep Creek country. They expect the San Pedro railway to tap their rich mining coun-

Superintendent Clark of the Clark mines and mill at Ophir reports lively business at the camp. He is deter-mined to make a successful mine out of Senator Clark's property there.

Properties of the West Mountain Gold and Copper company may at any time be sold upon a favorable vote of twothirds of the stockholders, an amend-ment to the articles of incorporation to that end having been flied with the

Advances in Republic stocks in consequence of news that the Great North-ern railway will build into the camp, have come more quickly and much more vigorously than many brokers had hoped for. There was a current opinion that there would be no marked improvement in stocks until work on the road should actually commence. That opinion seems to have been groundless, for already most of the Republic stocks have been climbing rapidly in value.

They have struck a new vein of very rich ore at 1,200 feet depth in the Portland mine. The discovery occurred in a cross-cut run out from the Burns shaft on the 1,000-foot level. Other streaks have been intersected by this crosscut, but the one entered last Monday is the finest ever found along its course. Mr. Burns estimates that the developments in the Portland since last January have opened a series of veins that contain, \$3,600,000 worth of ore. By adding the quantities opened in the Hidden Treasure. Lee and other veins of this group, he thinks it would not be extravagant to say that \$7,000,000 is closer to the values of the ore opened throughout the property since the beginning of the year.—Denver Post.

MARKET OPENED BETTER.

It Became Dull and Lifeless on Announcement of the Marquand Failure.

Finally Bull Operators Bid Up Western and Pacific Stocks Because of Market's Stability.

New York, June 28 .- The stock market reflected some feeling of relief in the opening dealings and gains predominated extending to 1% in Atchison. Reported buying for Berlin account helped the American department in London and was an influence here. The market became dull upon the announcement of the Marquand failure. Professional operators awaited the formal closing out of the firm's contracts and as they embraced a large variety of the speculative leaders in which the house was interested prices commenced to rise on bodding up of the leaders. The gains reached 2 points in Tobacco and St. Paul and a point in the tractions. The stimulus which prices received in buying for the suspended firm's account was maintained after the operation ceased. Those transactions in the fore-noon were 29,600 shares of various stocks and \$11,000 of bonds. Sales for their account were made of Bergen County Gas at 30@32, compared with 101%, the final price of Monday last. The stock recovered later to 45 on regular transactions. The sta-bility of the market after the "under the rule" transactions were finished encouraged the bull operators to bid up the western and Pacific stocks smartly causing an improved tone throughout. Union Pacific reached 110 and there were substantial gains in the Atchisons, St. Paul, Southern Pacific and Amal-gamated Copper. At noon speculation had a good tone, although best prices for a few stocks were shaded.

Bonds were dull and steady. With the yielding of morey rates, after the accounts of the failed firm had been closed out, an active demand sprang up from the bears and prices rose with considerable strength. son advanced 2% and Denver & Rio Grande preferred 2. The general advance was a point or better. The closing was dull and strong at the top.
