Assemble at Two O'clock This Afternoon to Ratify Slate Already Agreed On. AFFAIR OF THE HURRAH KIND. Fire Brand Resolutions and "We Are Holier Than Thou" Speeches Looked For. Burn the Mormons and Claim Everything on the Earth Program Being Outlined for the Campaign. This week is to end in a flourish of conventions. The Republican party has already finished its state preliminary politics, the American party holds the stage today and tomorrow and after a lapse of a week, beginning Monday, Oct. 1, with the Democratic primaries. American party definite activities began at 2 o'clock this afternoon in the Salt Lake theater, when the state convention was called to order. The work there was simple. It was just a case of electing every effort to force every effort to draw away from all affiliations a distinctive and specific line of cleavage through the people of the state. The old Tribune policy of bitterness assailing every man who is not a member of the political collar, was much in evidence. GOODWIN CHAIRMAN. Judge C. C. Goodwin was temporary chairman this afternoon. The program for the convention of W. M. Mont Perry for congress to be announced, Perry for red fire and blue flames, the nature of Mormon flying oratory, Mr. Perry was selected because he can serve as a sample of the old Tribune policy of bitterness assailing every man who is not a member of the political collar, was much in evidence. TONIGHT'S MEETING. The Americans won't let their convention on the day's activities. Tonight the ticket will be ratified. This is because more oratory is wanted, and to furnish it, George R. Black will lead off in anti-Mormon sentiment. Following him will come Dr. C. Dunbar, W. Mont Perry, and especially Frank J. Cannon. A number of people have wanted to see Cannon on the ticket, but as soon as they have come to turn in the names of the ticket, they have preferred to keep the lid on and let him shine in his present role of martyr and man in daily fear of his life, with occasional trembling fits to prove it. Mocked by the ladies' quartet, the American corps, and songs by Mrs. C. G. Plummer, will be the features outside of the speaking. Tomorrow morning the Americans will be up and at it again, in the capacity of a county convention. The ticket is already put up, and while a number of aspirants are mentioned, those who are backed by booms of any size are Tom Pitt for sheriff, H. V. Meloy for clerk, Mont Pitt for auditor, J. Edmunds for treasurer, A. J. Weber for county recorder, and Ben B. Heywood and Alvin T. Stanford for the state senate. Following this convention the party workers will be thrown at once into the field, as every effort is being made by the party to land its men this fall. It is fully realized that in this campaign the question of the party's survival is vitally involved. THE DIVORCE MILL. Edward L. Williams, Defendant, Won in Judge Morse's Court. Judge Morse today granted a divorce to defendant in the case of Edith M. Williams against Richard L. Williams on the ground of cruelty. Mrs. Williams asked for a decree of separate maintenance in her complaint and charged her husband with cruelty. She filed a cross-complaint charging him with cruelty also and asked for a decree of divorce. He was granted a decree, but Mrs. Williams was awarded \$30 per month alimony and also the custody of their two children. ADAM'S BIRTH OF HONORED PIONEER. In Hannah Smith, Wife of Late Prof. Geo. A. Smith, Summed Up. After a long illness, due to the influenza of old age, Mrs. Hannah Smith, wife of the late President of the University of Utah, died at her home in Salt Lake City, Utah, at the age of 84 years, on Monday, Sept. 18, 1906. She was born in New Hampshire, and was the daughter of a prominent family. She was a devoted wife and mother, and was highly respected in the community. Her husband, Prof. Geo. A. Smith, was a prominent educator and statesman. She is survived by several children and grandchildren.

Railroad Exchange Structure Completed Not Later Than Jan. 1, 1908. EAST TEMPLE AND 3RD SOUTH. Various Agents Are Now Figuring on Accommodations in the Place—Will Be Five Stories. Count Not Unwilling to Take Advantage of It to Force Better Terms. The Railroad Exchange building, which is to be erected by Mrs. Judge on the corner of East Temple and Third South streets, where the Druehl & Franken drug store now stands, is to be completed by Jan. 1, 1908. Such is the announcement forthcoming and the various railroad agents are now figuring on accommodations in the big building which is to be five stories in height and fire proof throughout. W. J. Halloran, the real estate man, who is in charge of this project, is in possession of the blue prints and is waiting on the various general agencies with the object in view of getting the representatives of the various systems under one roof. The Rio Grande ticket office has already spoken for the corner office, while the freight department is seeking for quarters adjacent. This latter proposition is not making a great hit among other lines who are friendly connections. They affirm with some amount of reason that the location of general freight offices are secondary matters to passenger departments when it comes to the ground floor. The Burlington, Rock Island, Colorado Midland, Santa Fe and the Erie Despatch are all figuring on securing quarters in the new building. It is a safe proposition that all the lines tributary to the Gould system will get together so as to cut up the passenger business. The location will be an ideal one for such a building. It is within a block of the Knutsford and other hotels and when the proposed Rio Grande-Western Pacific depot is erected across Third South on Fourth West it will be handy for all passengers traveling over the Gould lines. The Oregon Short Line and the Salt Lake Route ticket offices will remain in their present location further up the street. The proposed change the scramble for passenger business will narrow down to two localities with the Harriman-Clark camp up the street and the Gould forces on Third South. This will mean a merry scramble for passenger business. The building, according to the plans, will extend for 130 feet 6 inches on Third South and 100 feet on Main street. IN CRITICAL CONDITION. George Albert Lyman Seriously Ill at The Groves' L. D. S. Hospital. George Albert Lyman, son of President Francis M. Lyman, and brother of Prof. Richard R. Lyman of the University of Utah, is critically ill at the Groves' L. D. S. hospital, where he was operated upon today by Dr. Charles F. Wilcox, for a dangerous abdominal trouble. The operation disclosed the fact that the young man was in an even more dangerous condition than has been suspected, and his recovery is regarded as impossible. The young man is 33 years of age, and a native of Ellimore, though he lived for a long time at Tooele. He has a wife and three children. He served as a faithful missionary in the Southern States and while there acted as counselor to President Ben E. Hild. THRILLING ADVENTURE ON MEXICAN MOUNTAIN. Chicago, Sept. 21.—Four prominent college professors, one a member of the University of Chicago faculty, escaped from death almost by a miracle in Mexico last Wednesday after one of the most daring and arduous expeditions ever attempted to reach the summit of Popocatepetl. The party, consisting of Prof. H. H. Wood, of the University of Chicago, a member of the party, describing the trip to the summit of the mountain and a fall of 3,000 feet down a snow slope from the summit. Having gained the top of the peak, the members of the party, who were climbing out over Mexico City and the Gulf of Mexico. Then they decided to descend, but encountered a snow slide and slid down three-fifths of a mile before they came to a stop. Prof. H. H. Wood of Johns Hopkins, Prof. A. P. Coleman of the University of Toronto, and Prof. E. Wolf of Harvard were the three other members of the expedition. They had gone to Mexico to study geological conditions. Chamberlain is studying geological conditions at the mouth of volcanic craters. Several important discoveries were made the most important of which is a new measurement for the height of Popocatepetl. A government survey made several years ago placed the height of the mountain at 15,300 feet. The party found the actual height to be 15,320 feet. PRACTICAL THEOLOGY. Prof. Hugh Black Will Teach It in Union Theological Seminary. New York, Sept. 21.—A cable dispatch from Liverpool brings word that the Rev. Hugh Black, M. A. of Edinburgh, Scotland, is on his way here by the steamship Majestic. Black comes to New York to assume his duties as first incumbent of the new professorship of practical theology in the Union Theological seminary of this city. This chair was endowed by Morris K. Jesup, president of the New York chamber of commerce. The chair, which Prof. Black will hold, is unique in American theological education. According to Mr. Jesup's deed of gift Prof. Black will devote one-half of each year to instruction. The other half of each year will be devoted, in the words of Mr. Jesup, to "teaching and giving addresses wherever he may be invited, entering into pulpits, colleges, and universities and inspiring the finest men in them with zeal for the ministry." Prof. Black is already known to the American public as an author and preacher. THE PEONAGE CASES. Rex Smith and James E. Smith Acquitted of Charge. Capt. Girardeau Mo., Sept. 20.—Rex Smith and James E. Smith, two of the most prominent men in the state, were acquitted of a charge of peonage today in a trial before Judge Pollock today of any complicity in the conspiracy to deprive of the rights of their fellow citizens. Judge Pollock charged the jury to find the other seven defendants guilty if they thought the evidence produced by the government sufficient to indicate that they had confederated against the negroes. CASTELLAN MAY FORCE A DELAY. Of Divorce Case Unless Creditor's Attachment Case is Previously Settled. Paris, Sept. 21.—While no move has yet been made by the count's lawyers, the attorneys for the Countess de Castellane evidently anticipate an attempt on his part to force a delay in the trial of the divorce case, which has been fixed for Oct. 17, unless the creditors attachment case is previously settled. The count is not unwilling to take every advantage of the desire of the countess and the Gould family to make sacrifices to avoid further notoriety. The divorce case is a scandal, but it is doubtful whether the price is not too high. It turns out that the bills piled up by the count's creditors are very numerous. While the exact total is not known, the amount is authoritatively described as "fabulous." In spite of the pre-nuptial settlement, the French law regards the marriage partnership as making husband and wife equally responsible for the household expenses and debts, do not belong to this class. They are almost entirely for money borrowed from outsiders at ruinous rates and consequently they could be legally resisted. The count has another lever in the disposition of the children, who under the law are French citizens and subject to military service. He could enjoin the French law regarding the custody of the children which might be taken beyond the jurisdiction of France. Such action would doubtless result in the opposition by the court of restrictions embarrassing to the count in the future. If the creditors attachment is settled out of court the count is not expected to make a defense and it is believed that the divorce will be granted Oct. 17. Otherwise it is anticipated that the count will trump up a cause for postponement. THE AMERICA'S CUP. Sir Thomas Lipton Coming and Probably Will Issue a Challenge. London, Sept. 21.—Brig. Gen. Thomas H. Barry and Brig. Gen. W. P. Duval have come here from Germany, where they attended the maneuvers. They had arranged to sail for home Sept. 20, but having received orders to return as soon as possible, they are now endeavoring to secure passage on one of the liners sailing Sept. 22. They have not yet been successful, but Sir Thomas Lipton is extending themselves to make room for them possibly may succeed. Gens. Barry and Duval eventually secured accommodations on the Zealand, sailing from Antwerp Sept. 22. As an indication of the haste of their departure they are leaving behind them their families and their aides. Sir Thomas Lipton and Mr. and Mrs. T. P. O'Connor sailed from Liverpool today for New York on the Celtic. Gens. Barry and Mills a number of yachtsmen and others were present at the station to bid them farewell. Sir Thomas urged him to arrange a race for the America's cup before he returned. Sir Thomas promised to discuss the matter of another challenge while in New York and said he hoped it would be possible to make the arrangements. In talking to the American press, Sir Thomas said that while he could not say anything more definite he thought it "very probable that there will be another race." Friends of Sir Thomas are satisfied that he will issue a challenge during his stay in America. MCLELLAN WILL BE AT BUFFALO. New York, Sept. 21.—Mayor George B. McClellan announced today that he will attend the Democratic state convention at Buffalo next Tuesday. It is understood that Mayor McClellan will visit Buffalo to see the famous battle site and to see the monument to Charles F. Murphy and William R. Hearst on behalf of Dist. Atty. Jerome. TEN THOUSAND PEOPLE KILLED BY TYPHOON. Hong Kong, Sept. 21.—The entire fleet of 600 fishing junks were lost in the typhoon. This increases the mortality to 10,000 persons. LEISHMAN PUT OFF. Sultan Will Receive Other Ambassadors Today But Not the American. Constantinople, Sept. 21.—The fact that the sultan receives three other ambassadors today indicates that the sultan's health is such that he is unable to receive the American ambassador. The sultan's health is such that he is unable to receive the American ambassador. The sultan's health is such that he is unable to receive the American ambassador. CHINESE VIA BALTIMORE. Washington, Sept. 21.—For a short time today the city of Baltimore was made a port of entry for the Chinese. This action was taken by Acting Secy. Murray of the department of commerce and labor, in order that Charles F. Fook, a Chinese, might be admitted from the Philippines might be admitted. They arrived at Baltimore yesterday on the North German Lloyd steamship Caswell. It is the intention of Fook to take up a course of study in mechanical engineering at Ann Arbor, Mich., and Fook to study theology at Evanston, Ill. BIG FIRE IN TACOMA. Loss, \$150,000, One Woman Burned to Death, a Man Missing. Tacoma, Sept. 21.—Fire, which burned with terrific rapidity, destroyed property last night valued approximately at \$150,000. The property laid waste by the flames includes the Tacoma Eastern railroad depot and freight warehouse and four freight cars, the Payroll building bridge, a large heavy malleable iron, restaurant and vacant store building and three dwelling houses. In the heavy state of the fire, many of them were burned to a cinder. Less than half a dozen escaped. The fate of Mrs. Peterson, believed to have been burned to death, was settled this morning by finding portions of her body almost completely incinerated. Frank Krause, a teamster, who kept his horses in Russell's barn, and slept there, is missing. Seventy-five horses perished. The result of the Tacoma Eastern railway is cracked and the bottom will not be opened for several days. Trains are moving from Twenty-first street. Dr. Mar. John Bagley of the Tacoma Eastern left on an eastern trip last Monday. REMARKABLE CASE OF A CHILD Taking of Kidneys From One Animal And Planting Them in Another, Described. Stuttgart, Sept. 21.—Prof. Garre of Breslau, gave yesterday to the Congress of National Investigation and Medicine now in session here, the result of his experiments in transplanting blood vessels and organs from one body to another. This is the subject which attracted so much attention at the meeting of the British Medical association held in Toronto last August, when Dr. A. Garrell, of the University of Chicago read a paper giving his experiments in the same field. Prof. Garre described the case of a four-year-old boy suffering from cretinism, who had portions of his mother's thyroid gland transplanted to his spleen. The child, after nine months, is developing normally and can walk and talk. The professor declared that while it was impossible to transplant large blood vessels from living human beings, that blood vessels could be taken from freshly amputated limbs and transplanted to causes where large tumors had been removed or where otherwise the body would die. The professor said that the results of his experiments in transplanting blood vessels from one living animal to another. He also transplanted blood vessels from animals that had been dead for an hour and a half to five animals. The professor declared that while it was impossible to transplant large blood vessels from living human beings, that blood vessels could be taken from freshly amputated limbs and transplanted to causes where large tumors had been removed or where otherwise the body would die. The professor said that the results of his experiments in transplanting blood vessels from one living animal to another. He also transplanted blood vessels from animals that had been dead for an hour and a half to five animals. The professor declared that while it was impossible to transplant large blood vessels from living human beings, that blood vessels could be taken from freshly amputated limbs and transplanted to causes where large tumors had been removed or where otherwise the body would die. The professor said that the results of his experiments in transplanting blood vessels from one living animal to another. He also transplanted blood vessels from animals that had been dead for an hour and a half to five animals. The professor declared that while it was impossible to transplant large blood vessels from living human beings, that blood vessels could be taken from freshly amputated limbs and transplanted to causes where large tumors had been removed or where otherwise the body would die. The professor said that the results of his experiments in transplanting blood vessels from one living animal to another. He also transplanted blood vessels from animals that had been dead for an hour and a half to five animals. The professor declared that while it was impossible to transplant large blood vessels from living human beings, that blood vessels could be taken from freshly amputated limbs and transplanted to causes where large tumors had been removed or where otherwise the body would die. The professor said that the results of his experiments in transplanting blood vessels from one living animal to another. He also transplanted blood vessels from animals that had been dead for an hour and a half to five animals. The professor declared that while it was impossible to transplant large blood vessels from living human beings, that blood vessels could be taken from freshly amputated limbs and transplanted to causes where large tumors had been removed or where otherwise the body would die. The professor said that the results of his experiments in transplanting blood vessels from one living animal to another. He also transplanted blood vessels from animals that had been dead for an hour and a half to five animals. The professor declared that while it was impossible to transplant large blood vessels from living human beings, that blood vessels could be taken from freshly amputated limbs and transplanted to causes where large tumors had been removed or where otherwise the body would die. The professor said that the results of his experiments in transplanting blood vessels from one living animal to another. He also transplanted blood vessels from animals that had been dead for an hour and a half to five animals. The professor declared that while it was impossible to transplant large blood vessels from living human beings, that blood vessels could be taken from freshly amputated limbs and transplanted to causes where large tumors had been removed or where otherwise the body would die.
