General Office: 215 So. Main St., Salt Lake City, Utah.

GENERAL CONFERENCE.

The thirty-seventh Annual Conference of the Church of Jesus Christ of Latter-day Saints will convene in the Tabernacle, Salt Lake City, at 10 a. m. Sunday, April 6, 1897. All officers and members of the Church are invited to be present.

Special Notices: Relief Society conference Saturday, April 3, at 2 and 3:30 p. m. Relief Society meeting in the Assembly Hall on Monday evening, April 6.

Important Army Changes: On Friday next, April 2, Major General Thomas H. Ruger, commander of the Department of the East, closes his active military career, and soon upon the retired list of the United States Army.

THE AIR DISAPPEARING.

At different times scientists have attempted to freeze the air of the earth and the cause, or cause, that will eventually render it unusable as a medium for human life, is being suggested by the air system by gradually being its heat will be lost to the various planets an impossibility. Others have predicted the end of the world in a flash, through collision with some other orb in space.

NOT A SOURCE OF CHAGIN.

If County Commissioner L. K. Hall is correctly reported in a morning contemporary, he delivered himself of the following sentiment when speaking of the gambling, prostitution, illicit liquor selling, etc., allowed to go on in this city:

Why should it be a source of chagrin to the gentleman that the Mormon people are not here? It is a source of pride and better administration in this city than it has known the past seven years, a part of which time the gentleman himself was in the administrative municipal body? Does he really mean to say that he has regretted that the Mormon people are not here? Is he directly responsible for the present condition? Yet that is the only conclusion to be drawn from his remark, when the manner in which the statement is couched.

The magnet this week will be The New South. A Great Field. A Superb Company. A Beautiful Scenic Environment.

WEDNESDAY NIGHT

The Champion of All Champions, ROBERT PITZMANN'S

HUDDART FLORAL CO.

GRAND OPERA HOUSE

At the present preliminary discussion in the press and from the platform, and after lengthy debate in the state legislature, is introduced in New York to multiply its area and population by a process of sanitation, under what is known as the "Greater New York"

science, until the American people shall have become the master of the world's states. Under the charter just passed, the enlarged city will contain 1,000,000 inhabitants on Jan. 1, 1907, when it will have an area of 317.7 square miles and a population, according to final estimates, of over 3,000,000. These proportions themselves are stupendous and it is in this great interest, but of still greater moment to the new scheme of municipal government, which it will represent, the best thought of the expert scientists of the most intricate questions in the new charter, for instance, the principle is incorporated of investing the mayor with large powers and consequent direct responsibility to the people, and while the mayor is elected for four years, he is made ineligible for re-election. It is proposed to confer the present board of aldermen into a municipal assembly, consisting of two classes, an upper house of twenty-four members, elected from large council districts, constituting an average population of more than 250,000, and a lower house, consisting of thirty members, one elected from each assembly district, also a large area, containing an average population of 50,000. The terms of office of members of the upper house is four years and of the lower house two years. To be elected to the lower house the municipal assembly has provided for a large and effective committee, the apt and effective manner in which the present charter is framed is the present charter of London is composed of 22 members, while the county council of London has 220 members, and that this municipal assembly makes London the best governed city in the world.

The whole thing is more or less of a huge experiment, and its working in the direction of better city governments will be watched intently by every municipality in the world.

So far as the other and larger municipalities—the Associated Press—is concerned, we do not think it has been altered by the competition. Always on the alert, it has been expected to increase its effort, and has not been beaten in the race. There is a doubt that, whatever comes to the other organizations, the Associated Press will maintain its present high standard of efficiency as a printer of news from all the world's points, as well as in having a little ready as an incentive to do some cutting to keep first place; and in the view of the case the probable suspension of the United Press can only be regarded as a calamity. A monopoly in reorganizing as to everything else is a monopoly in this paper has no influence on our part.

From the recent experience of the United Associated Press in the East is so evident that that press bureau has with serious misfortune, if indeed, that collapse will not follow as a result of telegraphic news service in connection, the Associated Press receives the Associated Press reports, and has done so from the time of its institution in this part of the country. Hence the news in the oldest portion of the Associated Press in the Rocky Mountain region. Its service always has been highly satisfactory, and has never been broken, on the part of this paper, any limitation to change. We know we had a press service of the first order, and we expect that our appreciation thereof could be best shown, and our interest as a newspaper best advanced, by being loyal to it. Therefore we are inclined with the strongest praise of the Associated Press.

But notwithstanding that our predilections are with the Associated Press, we do not think it is becoming to glaze over the misfortune which has overtaken the United Press. We think that an honorable and energetic competitor adds much to the life of a business, at least in its beneficial effect upon the public, and where a new and enterprising press bureau entered the field in legitimate competition with a veteran one, it is not surprising an organization, the result of the contest is a organization that we are glad to see in the world, as in the case in any other line of business. In this view of the matter we welcome the advent of the United Press.

At different times scientists have attempted to freeze the air of the earth and the cause, or cause, that will eventually render it unusable as a medium for human life, is being suggested by the air system by gradually being its heat will be lost to the various planets an impossibility. Others have predicted the end of the world in a flash, through collision with some other orb in space.
