and measuring in places 70 feet between walls. A winze was sunk from the bot-tom on the 700, but soon entered the lime wall, and after other prospecting from the level below the management concluded the channel has beeen re-lieved of all its values, and for several years no work has been done there. Supt. Earls succeeded in reaching a point under the stope on the 750 and put up a raise, striking the ore is feet above. From this point a drift has been driven is feet weit in ore, and the same grade has been opened in another drift from the north end of the stope on the 750, show-ing conclusively that the channel had been lost by not taking into account its dip to the west. Another drift south from a cross cut on the 800 level is rap-
