

ANIMALS ALL AMBIDEXTEROUS

Right-handedness and right-eyedness came with genus homo. Dr. George M. Gould has watched for them in squirrels that use their front paws to hold nuts,

cats that strike at insects in the air or play with wounded mice and in many other animals, but he is certain no preference is given to the right side over the left.

But in the lowest human savages all over the world choice in greater expertness of one hand is clearly present. One cause for its development is in primitive military customs. In all tribes and countries since man used implements of offence and defence the left side, where the heart lies, has been protected by the shield, and the left

hand was called the shield hand, while the right hand was called the spear hand.

Next to fighting came commerce. The fundamental condition of bartering was counting with the low numbers, one to ten. The fingers of the free or right

hand were naturally first used, and all fingers today are called digits, as are the fingers themselves, while the basis of our numbering is the decimal or ten fingered system. Every drill and action of the soldier from ancient Greece to modern America is right-sided in every

detail. Firing from the right shoulder and sighting with the right eye brings the right eye into prominence. It is significant that with the decline of militarism comes the suggestion of schools for ambidexterity and the establishment of a movement for promoting the gospel of two-handedness and its obvious advantages.—Chicago Tribune.
