

REMODELING THE FACE OF THE GLOBE

The way in which man is altering and—as he believes—improving the physical surface of the earth, is described in a recent article by a writer who thinks that what has been done in this direction is "but an infinitesimal fraction of that which may, and doubtless will, be done." Some of the ways in which man

has been modifying or proposes to modify the physical geography of the planet on which he lives are described in the paragraphs quoted below (Daily Mail, London). The writer begins by predicting the future transformation of the Sahara Desert into an inland sea. He says:

"A canal, sixty miles long, connecting with the Atlantic the vast depression which runs close up to the coast nearly midway between the twentieth and thirtieth parallels of latitude, would do the business beautifully. The water would not, of course, cover the entire surface of the desert; here and there portions lying above the sea level. These would become the islands of the new Sahara ocean."

"What would be the results that would ensue upon this stupendous transformation? Some would be good and some bad. Among the latter may be mentioned the probable destruction of the vineyards of Southern Europe, which depend for their existence upon the warm, dry winds from the great African desert. As some compensation for this, however, the merchantile marines of the nations affected would be enabled to gain immediate and easy

access to vast regions now alien over to barbarism, and a series of more or less flourishing seaport towns would spring up all along the southern borders of Morocco and Algeria, where the western watershed of the Nile sinks into the desert, and on the northern frontier of the Congo Free State."

"In a similar manner the greater portion of the central Australian desert, covering an area of fully a million square miles, might be flooded. The island continent would then be converted into a gigantic atoll, and would resemble, roughly, an oval dish, of which the depressed central portion would be covered with water, and only the rim inhabited. In this connection it may be interesting to note that a company has actually been formed for submerging the Yuma desert in Southern California. If the plan as at present

proposed is carried out, a tract of absolutely uninhabitable territory comprising nearly 13,000 square miles, and the greater portion of which lies between 500 and 1,000 feet below sea-level, will be submerged."

But engineering science can transform fertile land into a desert as well as accomplish the opposite feat. The same writer believes that if the French had been allowed to get possession of the Sudan they might—at least they could—have diverted the Nile and thus depopulated Upper Egypt. With regard to diversion of the Nile he says further:

"It has even been suggested that it might be possible—by turning its waters into one of the many lateral ravines which run at right angles to the present course of the river—to find a new outlet for it in the Red Sea, and there-

by to transform, in process of time, that sheet of water into a great fresh-water lake. To accomplish this it would, of course, be necessary to build a giant dam across the southern 'neck' near Perim, and to regulate, or rather stop altogether, the inward flow of the Mediterranean through the Suez Canal—a big task, but one not impossible of accomplishment."

Brief reference is made to the Panama and Nicaragua canals, and the French war canal between the mouths of the Loire and the Rhone, which, when completed, will enable ironclads to dodge round behind Gibraltar when passing from the Atlantic to the Mediterranean, or vice versa.

"But it is the comparatively little engineering feats which have slowly but surely altered in the past and will alter in the future the face of the earth."

"A scheme was recently mooted to cut a ship canal through the center of Ireland, beginning at Dublin and terminating at Galway. It would be a difficult feat to accomplish, for most of the country through which it would pass is flat and boggy."

"But just consider the result. Ireland would no longer be one island, but two, and many of the best of Moore's melodies would be a palpable misnomer. Even this, however, would be better than to have our own 'silver Thames' transformed into a huge ditch, with ocean 'greyhounds' and ramping cargo steamers belching smoke through Cliveden woods or over Cookham village."

"Yet such an eventuality is by no means impossible, for it has already been bruited to construct a ship canal from Bristol to London by way of the Severn and the Thames."

THE PERFECTED "OXYGENOR KING."

This instrument, used only at night while the patient sleeps, possesses greater curative powers than all the drugs on earth. It utilizes only nature's greatest life-giving and curative agent,

PURE OXYGEN.

OXYGEN Nature's Elixir of Life.

Drugs Banished and Baffled, Physicians Dispensed with, while the Happy Patients Throw Away Crutches and Bid Farewell to Sleepless Nights. Utah People Applaud the New Departure in Drugless Healing.

THE GREATEST AND MOST WONDERFUL discovery ever yet given to mankind. The cures performed by this modern invention are the talk of the city, and the public stands amazed at the wonders wrought by this simple scientific device. Nothing has ever before taken such a hold upon the confidence of the people of Salt Lake City as has this advanced method with the Oxygenor King, with records behind it of thousands of cures, many of which are marvelous and unknown before in the history of the medical world. It is backed and endorsed by people in all ranks and conditions of life, and among them are many of our well-known citizens, both in public and private life, who are not giving their endorsement to some common, everyday article, and only to such as possess extraordinary merit. The time is now at hand when it is no longer necessary to suffer the pangs of pain and disease, or die prematurely, and if you do so, with this modern method within your reach, it is your own fault. Hundreds of living witnesses are walking our streets today and following their usual avocations who were pronounced incurable and had given up in despair, and many of whom would have certainly filled premature graves ere this had it not been for the application of these instruments. The experience of these people is full of meaning to you, and their words may be to you a message of hope and health. The instrument has built its reputation by reaching and curing the hardest and most difficult cases, and not the easy ones, as in most cases it has been applied, as it

were, in the eleventh hour, after all other means had failed. If you value your own life and the lives of your dear ones, do not neglect such a merciful opportunity. Life is too precious and too short to remain sick and in misery under old methods; with a balm for every ill, which has been weighed in the balance and found wanting.

Were it not a success you would hear it condemned everywhere, but on the other hand you hear nothing but praise for it.

It is but a few years ago that the motive power of our street cars was horses. Today one sees a wire stretched overhead in the street, and yet the cars move far superior to the old way. It is not strange then that a new discovery should be made in the line of physical science as applied to the healing art.

PERFECTED "OXYGENOR KING."

A Few Pointed Facts About Oxygenor Gleaned from the Writings of the Great Edmund Shaftesbury.

Oxygen is all activity; its mission in the world is to change; it tears down only to rebuild.

Oxygen is the only builder in the human body; it is man's greatest friend; it destroys the bad part of the living tissue, and rebuilds the good.

The blood in the body carries carbon for the purpose of exciting the oxygen. The air cells of the lungs supply some oxygen, and as the supply of oxygen is increased it acts in the body exactly as a pair of bellows blowing air upon the fire. The greater the supply of oxygen the more intensely do we exist.

There is always more carbon in the body than oxygen, and this is the fruitful cause for disease; the carbon ferments and causes humors, simply because not enough oxygen is present to burn the carbon, and THIS BURNING IS LIFE. We burn when we exercise and this burning is life—there is absolutely no other way of existing. We cannot live without burning, and WE CANNOT BURN WITHOUT OXYGEN.

The application is easy.

The Perfected Oxygenor King

Will cause the body to absorb through every pore an abundance of nature's own oxygen.

There can be no failure. If you use it, it will give you new life.

RUDYARD KIPLING'S LIFE SAVED BY OXYGEN

After All Other Medical Resources Were Exhausted.

Quite recently the whole English-speaking world watched at the bedside of that greatest of all living masters of the pen, Rudyard Kipling, anxiously watching his magnificent struggle for life against that terrible disease, Pneumonia. The newspapers published the minutest details of the progress of the disease which continued its onward march toward what appeared the inevitable triumph of death. The telegraph and cable lines from every part of the inhabitable globe were burdened with messages of sympathy. Both England and America were filled with a sense of impending calamity. Even the Emperor of Germany vied with people of less prominence to wire an expression of his profound sorrow over the catastrophe which was about to overtake the world of letters.

Kipling's recovery has done more than anything which could have occurred to give a world-wide reputation to "Oxygen" as an effective remedy for the cure of Pneumonia.

"Oxygen" saved Kipling's life; and all the world knows it, as the press dispatches contained lengthy accounts of his physician's final resort to Oxygen treatment to save the patient.

WHY DOCTORS DO NOT LIKE TO TAKE THEIR OWN MEDICINE.

DON'T BLAME THEM.

Prominent physicians of all ages have called Materia Medica murder. They admit that their medicines have destroyed more lives than war, pestilence and famine combined.

Prof. Gillam, of the New York College of Physicians and Surgeons, says: "A mild mercurial course and mildly cutting a man's throat are synonymous terms."

John Mason Goods, M. D., F.R.S., says: "The effect of medicines on the human system are in the highest degree uncertain, except indeed, that they have destroyed more lives than war, pestilence, and famine combined."

Sir John Forbes, M. D., F. R. S., says: "Some patients get well with the aid of medicine, more without it, and still more in spite of it."

James Johnson, M. D., F. R. S., says: "I declare as my conscientious conviction, founded on long experience and reflection, that if there were not a single physician, surgeon, man-midwife, chemist, apothecary, druggist nor drug on the face of the earth, there would be less sickness and less mortality than now prevail."

Alonzo Clark, Professor in the New York College of Physicians and Surgeons, says: "In their zeal to do good, physicians have done much harm; they have hurried to the grave many who would have recovered if left to nature. All our curative agents are poisons, and as a consequence every dose diminishes the patient's vitality."

Martin Payne, Professor in the New York University Medical College, says: "Drug medicines do but cure one disease by producing another."

The celebrated Oliver Wendell Holmes, M. D., says: "Except opium, wine, ether and chloroform, I firmly believe that if the whole Materia Medica, as now used, could be sunk to the bottom of the sea, it would be all the better for mankind and all the worse for the fishes."

The eminent Lebert, speaking of typhus fever, said: "Drugs, as such, are unnecessary, I give them chiefly to satisfy the patients and their friends."

Sir Astley Cooper, M. D., and the physician to the Queen of England, says: "The science of medicine is founded on conjecture and improved by murder."

Dr. Billings: "I visited the different schools of medicine, and the students of each hinted, if they did not assert, that the other sect killed their patients."

So much for what the doctors think of their own medicine.

HOLD ON! LOOK AND LIVE!

The advent of this instrument will be hailed with joy by all as fast as they become acquainted with its remarkable power to cure disease of whatever nature or in whatever stage of progression.

Pain and suffering will be relieved as never before and those who avail themselves of the opportunity to

have one constantly in the house ready for any emergency, will experience a feeling of relief for the ever dreaded inroads of sickness and the possibilities of premature death.

Those who are posted will not be without one in the house for any consideration.

It is ever ready at a moment's notice to relieve and cure, oftentimes accomplishing a cure in less time than it would take to summon a physician.

Its peculiar value lies in the fact that it is not necessary for one to know the nature of the ailment. It matters not whether it be an attack of Diphtheria, Croup, La Grippe, or a Headache, Heart trouble or Asthma or any other ailment to which humankind is subject. Neither does it matter whether the disease is chronic or acute. The simple application of the Oxygenor as soon as the least discomfort or illness is experienced is sufficient. You attach the instrument and it will do the rest.

And what is this Oxygenor, for which so much is claimed, and which so many of the best and most intelligent people of the United States so enthusiastically endorse? It is a simple apparatus scientifically constructed, capable of inducing great floods of oxygen into the human system, doing its work silently, mildly, while the patient is asleep or awake, causing no disturbance to the organization, but increasing the amount of oxygen in the system and creating an affinity for it so that the system absorbs more and more of it from the atmosphere, increasing the circulation, not only of the blood but also of chyle, lymph and other juices of the body, thus invigorating the entire system, increasing the vitality, purifying the blood, destroying germs, inducing refreshing sleep, improving the appetite, eliminating poisons from the system and, in short, restoring the equilibrium (health).

It is a Pleasure to Explain. Write or Call and Investigate. Consultation and Calls Free. Office Hours, 9 a. m. to 5:30 p. m.

OXYGENOR CO.,

329 D. F. Walker Bldg, Salt Lake City,
West Second South St. Opposite Cullen Hotel.

AGENTS WANTED

A good energetic gentleman or lady with some money, to represent us in all towns in Utah, Idaho, Montana and Wyoming for the Perfected Oxygenor "King," for the cure of all disease, chronic or acute, with Oxygen.

OXYGENOR CO.,
329 D. F. Walker Block, Salt Lake City, Utah.

Endorsed by Deputy County Clerk

GEO. E. BLAIR.

Salt Lake City, Utah, Oct. 25, 1899.

Oxygenor Co., City—
Gentlemen—I have used your "Perfected Oxygenor King" with excellent results. It has relieved me of rheumatism, and by its use I broke up an incipient attack of typhoid fever. I heartily recommend its careful investigation by all seeking relief from disease. Yours, very truly,
GEO. E. BLAIR.
Salt Lake City, Utah, Oct. 25, 1899.

Author of the Popular "Nadine."

Gentlemen: Replying to your request for a few lines regarding the Oxygenor, I take pleasure in stating my own experience.

One diabolical to be humbugged by some of the numerous fake vendors into buying his worthless drugs and wares, therefore when first introduced to an Oxygenor one eyes it very dubiously and gives its curative agency the benefit of a large skepticism.

Candidly, at first I regarded price asked, of vastly more value than an Oxygenor, but when life had become to be a burden on account of continued sickness, when nothing gave relief, then I began to consider this unique product of medical science. It was brought to me and explained as nothing more nor less than an instrument to flood the human system with pure oxygen. Being a little conversant with nature's laws, I am aware that oxygen is an antidote for the poison engendered by the different disease germs. I decided to test its efficiency. Having a complicated case of lung and heart trouble, with nervous prostration, I did not expect immediate relief, but can affirm without any exaggeration that it simply gave relief at once, like a miracle. A few weeks' treatment has seemingly effected a permanent cure. I now reverse the estimate of value of the price and the Oxygenor.

To the suffering world the Oxygenor can be but of inestimable value. I am, very respectfully,
NINA E. ELLISON,
Salt Lake City.

Typhoid Fever.

Salt Lake City, Utah, Sept. 15, 1899.

To Whom It May Concern: August 20th my wife was suffering from Typhoid Fever of several days' standing, and was growing rapidly worse, in fact she had become so bad that our families had gathered around her bedside fearing that she could live but a few hours.

Through a friend's advice I procured an Oxygenor and applied it at once; this was at 7:30 p. m., and her temperature was 105, and in three hours she was out of all pain, fever reduced and resting quietly.

The following morning I discharged my family physician, who told me my wife would die, but instead she became rapidly better and was soon out of all danger. I used nothing but the Oxygenor, so I positively know it saved her life, as she could not have lived ten hours longer under her former treatment.

The Oxygenor was a godsend to me, and I recommend it to all as the greatest curative agent I have ever heard of.

THOMAS ROBINSON,
142 North Eighth West,
Subscribed and sworn to before me this 15th day of September, 1899.
GEO. N. LAWRENCE,
Notary Public.

Prominent Railway Man's Statement.

Salt Lake City, Utah, June 20, 1899.

Rocky Mountain Oxygenor Co.:
Dear Sirs: I wish to express my hearty approval of the oxygenor treatment has done in my family. I certainly think the Oxygenor is all right, it being both pleasant and safe, and so simple that a child can use it. I unhesitatingly recommend it to any one ailing.

C. J. MINTT,
Chief Clerk Accounts, O. S. L. R. R., Salt Lake City.

Speaks from Experience.

Rocky Mountain Oxygenor Co.:

Gentlemen: I wish to state that I have had one of these valuable instruments in my family for the past five years, and I can truthfully affirm that it will accomplish all you claim for it. Its use in any family will prove all I have said if the truth be known, and one and use it as we have done. You are at liberty to refer any one to me. Yours truly,
J. S. GARD,
City Freight and Passenger Agent Colorado Midland R. R. Salt Lake, June 24, 1899.

Salt Lake City, Utah, Dec. 5th, 1899.

Rocky Mountain Oxygenor Co.:
Gentlemen: In regard to the Oxygen treatment, I wish to say that in 1896 I purchased one of Dr. H. Sanchez Oxygenor Victory, No. 2, my wife had been sick for a number of years, this was in Tacoma, Wash. We employed the best medical aid possible, without any relief whatever. The Oxygenor Victory No. 2 did her very little good, as she couldn't wear it very much for the terrible disagreeable feeling it seemed to produce, but with most other ailments that we used it for in the family it seemed to be all right, but worked very slow. We tried different climates, but everything failed to do my wife any good, but on Nov. 20th, after reading your ads in the papers, and seeing so many testimonials from good reliable people of Salt Lake, we made up our minds to investigate the "Perfected Oxygenor King," and after so doing, we purchased one, I must say with very little faith in its doing my wife any good, from the fact that we had used the Oxygenor Victory No. 2 for so long without any cure. It is natural that we would feel so. At this time my wife had been confined to her bed for six weeks with what the doctor said was gall stones, but thanks be to heaven, after using the "Oxygenor King" for five days she was out of bed and around the house, and now she has used it about six weeks she is in better health than she has been for ten years. We use it for everything in the way of sickness, it works much quicker than anything we ever used, it will cure a cold in one night and if every family had one, medicine and drugs would soon be a thing of the past. I heartily recommend every one to investigate this wonderful invention. You are at liberty to refer any one to us, or to publish this statement.
E. D. STILLMAN,
475 East Fourth South Street.
