DESERET EVENING NEWS: SATURDAY, MAY 5, 1906.

THIS WOMAN MAY PRACTISE IN U. S. SUPREME COURT

Mrs. Ella Knowles Haskell of But to Mont., was admitted to practise law before the United States supreme court last week. Mrs. Haskell received this distinction in Washington, D. C., where she went as a delegate to the congress of the Daughters of the American Revolution.

Mrs. Haskell is a New England woman, but she began the practise of law in the west. In 1892 she ran as Populist candidate for attorney-general of Montana against Henry J. Haskell, the Republican candidate, and made a sen-sational campaign. Haskell was elected, but he soothed his fair rival's feel-ings by matrying her and appointing her assistant attorney-general. They are divorced now, and Mrs. Knowles practises law independently.

INDIAN THEORY OF EARTHQUAKES

AJOR CICERO NEWELL tells why there are such things as earthquakes, tidal waves and volcances. The major learned hings from the Dakota Indians. en I lived among the Dakotas," aj. Newell in the Senttle Times, d men who, like Buddha, gave these things from the Dakota Indians. "When I lived among the Dakotas," said Maj. Newell in the Seattle Times, "I found men who, like Buddha, gave seven years of their lives to prayer and fasting that they might become pure in the sight of God, or the Great Spirit, as they call that being. After they have proved themselves before they have proved themselves before their people by performing so-called miracles, such as holding their hands and arms in boiling water and not be-ing burned, shot with poisoned ar-

GEORGE MOORE DISCUSSES AMERICAN MEN OF LETTERS

Special Correspondence. ARIS, April 25 .- George Moore, that

erratic genius who is unquestionably one of the most extraordinary men of letters of our time, was found by your correspondent today in

the Continental hotel, which he visits frequently for local color. As everyone knows, after spending several years in London, and afterward trying Dub-lin for a time, the author of "Esther Waters" has now returned definitely to Paris, the city of his love, where he studied art and literature, and mide life-long friends many years ago.

Unaffectedly pleased over the success of his latest novel, "The Lake," Mr. Moore is working hard, and corrects his proofs in the cafes after the fashion of the Parisian men of letters. He rises early, eats little, drinks no stimulants, smokes one cigar a day; is impatient with bores, but talks like a torrent Asked his opinion of American men of letters, George Moore responded this

"Edgar Allan Poe is unread in Amer-ica, whereas he is an integral part of the artistic life of Paris. The pulpit damned his morals and the people thought it was condemning his litera-ture. The novels of William Dean Howells are pretty, nothing more. Wa't Whitman wrote well because he wrote with the whole language. Marion Craw-ford is non-existent. He is a scribbler-of-all-work, particularly of Italian work. You might as well ask me about articles in a daily paper as about Craw-ford's books. I have not read Hamlin Garland. He has written nothing great. If he had I should know it. "Jack London and such as he are like

salon pictures. They paint women with violet dresses and with roses in their hats. In other words they make colored photographs. There is no tonality in their pictures. The novels of such men are imere images. They represent sit-ters exactly as the sitters wish to be. Edgar Saltus is not read now. He is a very clever man. I have no taste for those books whose only object is to make one hold his sides. Hence I do not like Peter Dunne's writings. Bret Harte, yes. The humor of Bret Harte is pleasantly done. I love him whether in prose or verse. Now and then a

No Pill is as pleasant and positive as DeWitt's Little Early Risers. These Famous Little Pills are so mild and effective that children, delicate ladies and weak people enjoy their cleansing effect, while strong people say they are the best liver pills sold. Never gripe.— Sold by F. C. Schramm, druggist: where the cars stop. clever man writes a novel which talked about during his lifetime. Su

"Edgar Allan Poe is unread in Amer-is 'Madame Bovary," by Flaubert." In reply to my question as to whether

"Sometimes it is relieved in one way, sometimes in another. Should the earth crack in midocean, where the crust is usually thinner, then the wa-ters of the ocean fill in and there is a great explosion as the water strikes this great bed of hot inva, large mass-es of the rim are thrown up and isl-arda appear. Sometimes they stay on the surface of the ocean, sometimes they fail back and are again covered cause of earthquakes and tidal waves, and they explain it like this: they fall back and are again covered with water, but that upheaval so lifts "They say volcances are the safety valves of the earth. That the rim of the earth is gradually cooling. As it cools it contracts, making the pressure the water that a great wave is started for the shore that carries death and destruction in its way.

on the hot hava in the interior greater At last something must give way, this the earth are now closing up; only a few remain. The crust is becoming rim must crack open, or the volcances must burst forth and emit this comso thick that the cooling process is more slow."

In reply to my question as to whether or not any recent literary production pleased Mr. Moore, the autocrat replied: "Yes, there is one. It is 'La Vie d'un Simple.' written by a peasant about a peasant. There is also a good play writ-ten receatly by a man called Synge, of Dublin. It is like flowing water. It is called 'The Well of the Saints.'" Like Napoleon the Great George Moore is a bundle of contradictions. Kind-hearted by nature, he will not hesitate to say to a sensitive and high-ly cultured woman, "Madam, do not expect me to write down to your level." And if you ask him why he attacks the cherished ideals of his race, he will tell you he is not an Irishman not-withstanding the fact that his father, George Henry Moore, was a pronounced Irish patriot. He will say almost snap-pishly. "I am an Englishman born in Ireland."

"Many of the old safety valves in

"to instruments invented for the providing of the motions of the earth's ar a: durtas an earthquake are looked uper by scientists as the most dellsate of all machines. So highly sensitive are they, indeed, that the very slightest vibratory motion is recorded perfectly. Even the tread of feet cannot escape this instrument if sufficient to oause & vibration

SEISMOGRAPH RECORDS 'FRISCO FARTLOUAKE 2,6 % MILES

AWAZ.

The complimentary part of the instrument known as the seismograph is composed of a system of levers connecting an astatically suspended body with various surfaces that are moved by clockwork. These surfaces are construct. ed of highly sensitive material on which needles play as the suspended weight responds to the vibrations of the earth's crust.

The earthquake shock in San Francisco was distinctly recorded by a seismograph located in New York City. A chart, part of the instrument in question, showed that the seismograph began to record the trembling of the earth just after \$:31 o'clock Wednesday morning and that it continued until 8:4 a. m. This showed that the tremor had occupied about nineteer minutes in traveling across the continent. The most violent vibration was recorded at 8:32.
