way from entering any town or city a grade crossing, and that would give to the inhabitants of every community on a particular road, would be a benefit to the whole community. The system is expensive, it is true, but it works satisfactorily elsewhere, and could not fail to do so here. The chief difficulty would be in a change to such costly means of the roads, and this could be overcome by gradual steps without disturbing unnecessary expense on the railroads.

The following table shows the cost of building bridges and roads of like width. The figures given are based upon the cost of labor and materials.
