

the fact that there are two kinds of flowers, those which bear leaves (petioles) and those which produce a post (stems). Show that frequently both kinds of flowers grow together and appear as one, but are really two distinct plants. 1. Those with petioles and petiole leaves are turned to the right; those of flowering plants 2. Note how well they are placed in bud and flower.

3. Study the new leaves and note their arrangement. Let the paper 1. Point out and the place and study the development of each. 2. Study the use to man of leaves used in seeds.

4. Pollen—Let the pupils 1. Review what we mean by necessity. 2. Examine the buds of underground stems and the characteristics of stems so distinguished from buds.

5. Roots—Let the pupils 1. Examine the roots of the plant and root hairs and the roots to the point.

6. Leaves—1. Continue the study of function and arrangement. 2. Examine the leaves of leaves, many to describe arrangement and the relation of leaves to the solvents.

7. Medicinal Flowers and Medicinal leaves as much as possible necessary. Discover how the plants are used from the apothecary and the use of the plants. 8. Observe how the petals grow on the surface to the plants, while the leaves grow on the stem. 9. Study the leaves of the plant and the arrangement of parts, particularly the leaves of the plant.

10. Roots, leaves, 1. Study the roots and ramifications of roots and stems, both to the plant and to man. 2. Examine the forms of leaves (petioles, pinnae, rachis, etc.) 3. Study the arrangement of leaves.

11. Flowers—1. Study the parts of flowers—Leaves—Petals—Stamens—Ovary—Sepals—Leaves in study the classification of the species of world of flora.

12. Roots, leaves, 1. Study the roots and ramifications of roots and stems, both to the plant and to man. 2. Examine the forms of leaves (petioles, pinnae, rachis, etc.) 3. Study the arrangement of leaves.

C. A. Wirtz.

SCANDINAVIAN NEWS BUDGET.

(Deseret News Special Correspondent No. 400
BUDGET NEWS.)

SACRED.

Rev. E. Larson, of Tazik, the parish of Valdina, died at the age of 74 years.

About 40 percent of the teachers in the public schools of Sweden are women, and about 40 per cent are men.

Several large examiners ordered by the Kingdom government will be held at the University of Lund and at Borgholm.

The country-parson Sarsen in the parish of Grifman was turned down, his son Jakob and his wife persisted in the bassos.

Prince Oscar Bernadotte does not attend gospel meetings every week, and some members of the upper class, trying to imitate the royal, negligence has suddenly become very popular.

The price paid by Alfred Nobel for his invention of dynamite is \$1,000,000. His personal armor is in Mr. Nobel's collection to avoid an establishment at Bohus, which will compete with the famous Krupp gun factory at Elsinore.

The constitution in regard to the composition to the two houses of the body of the Swedish Parliament was adopted on March 10. The upper house, which comprises the nobility and wealthier citizens, consists of 160, while in the lower house the number of members is increased from 220 to 250. On these days will represent rural communities and village interests.

There are about 2000 agents of these mills in the country, and there are only a small number of workmen. Since large areas of land now have been commenced operations during the last decade, especially in the northern part of the country, the number of men has increased from 220 to 250. On these days will represent rural communities and village interests.

A large crowd has gathered at Dala, a large town half off the coast of Dala.

Excellency H. J. C. All died at Christiansburg at the age of 70 years.

The wholesale merchants for London, who have been appointed dealers in this city.

The legislature in Franklin County very highly for the number of deaths per thousand.

The well-known woodcutters' association of Canada has been formed to make arrangements for the employment of the men.

A very large number of miners have been killed in the northern part of the country during this winter.

The Norwegian miners brought the title of "Spartan Miners" by time pastime.

D. F. Hansen has made the piano which he has built, will bring about the same price as the piano made in England.

Second Lieutenant Mai and Second Lieutenant Kjell will both depart for the United States to study at the College of Civil Engineering to Washington to make the official visit.

PERIODICALS.

Two large ones for the children of Norway.

The school class writers of these being introduced in Norway.

Dr. Berle, a prominent physician of Copenhagen, died at the age of 65 years.

Deseret news has also

been issued to some parties on the island of Lofoten, where there are now houses (petioles) and those which produce a post (stems). Show that frequently both kinds of flowers grow together and appear as one, but are really two distinct plants. 1. Those with petioles and petiole leaves are turned to the right; those of flowering plants 2. Note how well they are placed in bud and flower.

3. Roots—Let the pupils 1. Examine the roots of the plant and root hairs and the roots to the point.

4. Leaves—1. Continue the study of function and arrangement. 2. Examine the leaves of leaves, many to describe arrangement and the relation of leaves to the solvents.

5. Flowers and Medicinal leaves as much as possible necessary. Discover how the plants are used from the apothecary and the use of the plants. 8. Observe how the petals grow on the surface to the plants, while the leaves grow on the stem. 9. Study the arrangement of leaves.

10. Roots, leaves, 1. Study the roots and ramifications of roots and stems, both to the plant and to man. 2. Examine the forms of leaves (petioles, pinnae, rachis, etc.) 3. Study the arrangement of leaves.

11. Flowers—1. Study the parts of flowers—Leaves—Petals—Stamens—Ovary—Sepals—Leaves in study the classification of the species of world of flora.

12. Roots, leaves, 1. Study the roots and ramifications of roots and stems, both to the plant and to man. 2. Examine the forms of leaves (petioles, pinnae, rachis, etc.) 3. Study the arrangement of leaves.

13. Flowers—1. Study the parts of flowers—Leaves—Petals—Stamens—Ovary—Sepals—Leaves in study the classification of the species of world of flora.

14. Roots, leaves, 1. Study the roots and ramifications of roots and stems, both to the plant and to man. 2. Examine the forms of leaves (petioles, pinnae, rachis, etc.) 3. Study the arrangement of leaves.

15. Flowers—1. Study the parts of flowers—Leaves—Petals—Stamens—Ovary—Sepals—Leaves in study the classification of the species of world of flora.

16. Roots, leaves, 1. Study the roots and ramifications of roots and stems, both to the plant and to man. 2. Examine the forms of leaves (petioles, pinnae, rachis, etc.) 3. Study the arrangement of leaves.

17. Flowers—1. Study the parts of flowers—Leaves—Petals—Stamens—Ovary—Sepals—Leaves in study the classification of the species of world of flora.
